**Challenge and Response**, 1994 We have recently experienced the rather sudden end of the cold war, an event that ranks among not only the top public events of this century, but in view of the projected consequences had a nuclear war occurred, may be judged as a seminal point in the history of our civilization. Mankind's highest level of technology had been impressed into the service of military security as two sizable alliances faced each other nervously as they contemplated the horrendous costs of implementing their war-making capabilities. For the great powers, a big war didn't make sense. But for many states, smaller wars may well remain attractive.

**Missile Guidance and Control Systems** George M. Siouris, 2006-05-07 Airborne Vehicle Guidance and Control Systems is a broad and wide- angled engineering and technological area for research, and continues to be important not only in military defense systems but also in industrial process control and in commercial transportation networks such as various Global Positioning Systems (GPS). The book fills a long-standing gap in the literature. The author is retired from the Air Force Institute and received the Air Force's Outstanding Civilian Career Service Award.

**U.S. Marines in the Persian Gulf, 1990-1991** Charles J. Quilter, 1993 This monograph is a preliminary accounting of the role of the U.S. Marine Corps' senior command in the Persian Gulf conflict from 8 August 1990 to 16 April 1991. It is one of a series covering the operations of the 1st Marine Division; the 2nd Marine Division; the 3rd Marine Aircraft Wing; Combat Service Support Element, comprised of 1st and 2nd Force Service Support Groups units; Marines afloat in Desert Shield and Desert Storm; and humanitarian relief operations in northern Iraq and Turkey. -- Amazon

Lethal and Non-Lethal Fires Army University Press, Thomas G. Bradbeer, 2018-09 Lethal and Non-Lethal Fires: Historical Case Studies of Converging Cross-Domain Fires in Large Scale Combat Operations, provides a collection of ten historical case studies from World War I through Desert Storm. The case studies detail the use of lethal and non-lethal fires conducted by US, British, Canadian, and Israeli forces against peer or near-peer threats. The case studies span the major wars of the twentieth-century and present the doctrine the various organizations used, together with the challenges the leaders encountered with the doctrine and the operational environment, as well as the leaders' actions and decisions during the conduct of operations. Most importantly, each chapter highlights the lessons learned from those large scale combat operations, how they were applied or ignored and how they remain relevant today and in the future.

*Command in Air War* Michael W. Kometer, 2010-07-01 This work examines whether centralized control and decentralized execution is a valid doctrinal tenet, given the technological advances in the information age. Fascinating scenarios from recent operations, set in the context of a complex air operations system, show the dilemmas presented by participants' increased access to information-and the resulting consequences of their decisions. With the uncertainty of war and the blending of diverse organizations, the author illustrates that commanders must balance empowerment with accountability by developing depth in

command relationships among their subordinates. Originally published in 2007.

**Space 2.0** Joseph N. Pelton, 2019-04-26 A true revolution has rocked the space industry, as Silicon Valley and new startup companies around the world have shaken up the status quo. This book explains how and why this remarkable change has happened, starting from the industry's origins during the Space Age and working its way to the present day. No other industry in the world has experienced the dramatic shift in technology and services as rapidly as the field of satellite services and rocket launch systems has. It also turns an eye to the future, discussing the amazing feats and potential issues we can expect from this shifting arena by 2030. With its beginner-friendly writing style and plethora of illustrations, this book serves as a perfect introductory text to students and professionals alike wishing to learn more about the key trends in the field of space applications and launch systems.

**Technocreep** Thomas P. Keenan, 2014-09-13 "Technology is rapidly moving into our bodies," writes cyber expert Keenan, "and this book gives a chilling look ahead into where that road may lead us – on a one way trip to the total surrender of privacy and the commoditization of intimacy." Here is the definitive dissection of privacy-eroding and life-invading technologies, coming at you from governments, corporations, and the person next door. Take, for example, "Girls Around Me": a Russian-made iPhone App that allowed anyone to scan the immediate vicinity for girls and women who checked in on Foursquare and had poorly secured Facebook profiles. It combined this information in a way never intended by the original poster. Going to a Disney theme park? Your creepy new "MagicBand" will alert Minnie Mouse that you're on the way and she'll know your kid's name when you approach her. Thinking about sending your DNA off to Ancestry.com for some "genetic genealogy"? Perhaps you should think again: your genetic information could be used against you. With security scares like the Heartbleed bug (which compromised even supposedly safe internet behemoths like Google and Yahoo!) becoming more commonplace, this book is a must-read for anybody who values their privacy in a wired world.
