Kip Thorne

Interstellar Christopher Nolan, Jonathan Nolan, 2014-11-24 In *Interstellar* a group of explorers make use of a newly discovered wormhole to surpass the limitations on human space travel and conquer the vast distances involved in an interstellar voyage. The screenplay of *Interstellar* is written by Christopher Nolan and his frequent collaborator, Jonathan Nolan. In addition to the screenplay, this screenplay book also contains over 200 pages of storyboards and an Introduction featuring a conversation about the film with Christopher Nolan and Jonathan Nolan. The screenplay book is based on the film from Warner Bros. Pictures and Paramount Pictures. *Interstellar* and all related characters and elements are trademarks of and © Warner Bros. Entertainment Inc. (s14).

The Science of Interstellar Kip Thorne, 2014-11-07 A journey through the otherworldly science behind Christopher Nolan's award-winning film, *Interstellar*, from executive producer and Nobel Prize-winning physicist Kip Thorne. *Interstellar*, from acclaimed filmmaker Christopher Nolan, takes us on a fantastic voyage far beyond our solar system. Yet in *The Science of Interstellar*, Kip Thorne, the Nobel prize-winning physicist who assisted Nolan on the scientific aspects of *Interstellar*, shows us that the movie's jaw-dropping events and stunning, never-before-attempted visuals are grounded in real science. Thorne shares his experiences working as the science adviser on the film and then moves on to the science itself. In chapters on wormholes, black holes, interstellar travel, and much more, Thorne's scientific insights—many of them triggered during the actual scripting and shooting of *Interstellar*—describe the physical laws that govern our universe and the truly astounding phenomena that those laws make possible. *Interstellar* and all related characters and elements are trademarks of and © Warner Bros. Entertainment Inc. (s14).

The Fictional Christopher Nolan Todd McGowan, 2012-09-01 From *Memento* and *Insomnia* to the Batman films, *The Prestige*, and *Inception*, lies play a central role in every Christopher Nolan film. Characters in the films constantly find themselves deceived by others and are often caught up in a vast web of deceit that transcends any individual lies. The formal structure of a typical Nolan film deceives spectators about the events that occur and the motivations of the characters. While Nolan's films do not abandon the idea of truth altogether, they show us how truth must emerge out of the lie if it is not to lead us entirely astray. *The Fictional Christopher Nolan* discovers in Nolan's films an exploration of the role that fiction plays in leading to truth. Through close readings of all the films through *Inception*, Todd McGowan demonstrates that the fiction or the lie comes before the truth, and this priority forces us to reassess our ways of thinking about the nature of truth. Indeed, McGowan argues that Nolan's films reveal the ethical and political importance of creating fictions and even of lying. While other filmmakers have tried to discover truth through the cinema, Nolan is the first filmmaker to devote himself entirely to the fictionality of the medium, and McGowan discloses how Nolan uses its tendency to deceive as the basis for a new kind of philosophical filmmaking. He shows how Nolan's insistence on the priority of the fiction aligns his films with Hegel's philosophy and understands Nolan as a thoroughly Hegelian filmmaker.

Alternative Movie Posters Graffito Books, 2015-10-12 The world's best, wittiest lowbrow designers reimagine movie

posters for 150 cult films that are built into the DNA of any movie buff Nightmare on Elm Street, Psycho, Vertigo, Poltergeist, Metropolis, Ghostbusters, Blue Velvet, Blade Runner, Star Wars, Alien, Mad Max, Robocop, Reservoir Dogs, Jaws, The Big Lebowski, Rosemary's Baby, Taxi Driver, The Postman Always Rings Twice, and many more films are given new art by the likes of Grimb, Coop, O'Connell, Alderete, Hertz, Pullin, and more. Almost always better than the originals, these new visual takes on iconic movies will delight anyone with an interest in film. For the Hollywood aficionado this visual feast makes a perfect gift; while for graphic designers, both professional and students, this makes for a great source of ideas and inspiration.

The Philosophy of Christopher Nolan Jason T. Eberl, George A. Dunn, 2017-06-20 As a director, writer, and producer, Christopher Nolan has substantially impacted contemporary cinema through avant garde films, such as Following and Memento, and his contribution to wider pop culture with his Dark Knight trilogy. His latest film, Interstellar, delivered the same visual qualities and complex, thought-provoking plotlines his audience anticipates. The Philosophy of Christopher Nolan collects sixteen essays, written by professional philosophers and film theorists, discussing themes such as self-identity and self-destruction, moral choice and moral doubt, the nature of truth and its value, whether we can trust our perceptions of what's "real," the political psychology of heroes and villains, and what it means to be a "viewer" of Nolan's films. Whether his protagonists are squashing themselves like a bug, struggling to create an identity and moral purpose for themselves, suffering from their own duplicitous plots, donning a mask that both strikes fear and reveals their true nature, or having to weigh the lives of those they love against the greater good, there are no simple solutions to the questions Nolan's films provoke; exploring these questions yields its own reward.

Black Holes and Time Warps Kip S Thorne, 1994 In this masterfully written and brilliantly informed work, Dr. Rhorne, the Feynman Professor of Theoretical Physics at Caltech, leads readers through an elegant, always human, tapestry of interlocking themes, answering the great question: what principles control our universe and why do physicists think they know what they know? Features an introduction by Stephen Hawking.

Specter of the Monolith Barry Vacker, 2017-07-11 Specter of the Monolith offers a radically original critique of how humans have confronted the majesty of the universe-via art, media, science, pop culture, space exploration, and the greatest space films. In honor of the 50th anniversary of 2001, Specter of the Monolith offers a hopeful and inspiring alternative vision of human destiny in space.

The Supernova Story Laurence A. Marschall, 2013-11-11 Astronomers believe that a supernova is a massive explosion signaling the death of a star, causing a cosmic recycling of the chemical elements and leaving behind a pulsar, black hole, or nothing at all. In an engaging story of the life cycles of stars, Laurence Marschall tells how early astronomers identified supernovae, and how later scientists came to their current understanding, piecing together observations and historical accounts to form a theory, which was tested by intensive study of SN 1987A,

the brightest supernova since 1006. He has revised and updated *The Supernova Story* to include all the latest developments concerning SN 1987A, which astronomers still watch for possible aftershocks, as well as SN 1993J, the spectacular new event in the cosmic laboratory.

Carbon Tapan Gupta, 2017-10-25 All living things contain carbon in some form, as it is the primary component of macromolecules including proteins, lipids, nucleic acids (RNA and DNA), and carbohydrates. As a matter of fact, it is the backbone of all organic (chemistry) compounds forming different kinds of bonds. *Carbon: The Black, the Gray and the Transparent* is not a complete scientific history of the material, but a book that describes key discoveries about this old faithful element while encouraging broader perspectives and approaches to its research due to its vast applications. All allotropes of carbon are described in this book, along with their properties, uses, and methods of procurement or manufacturing. Black carbon is represented by coal, gray carbon is represented by graphite, and transparent carbon is represented by diamond.

The Roving Mind Isaac Asimov, 2010-10-28 Isaac Asimov's death on April 6, 1992, was a great loss to literature, science, and freethought. The vision of one of America's most prolific authors is unmatched today, and his pointed honesty shines through in this fascinating collection of essays, now reissued in this special tribute edition. Asimov demonstrates his extraordinary skill at disseminating knowledge from across the spectrum of scientific disciplines as his roving mind ranges from the polemical to the persuasive, from the speculative to the realistic. The sixty-two essays in this volume include such subjects as creationism, the distinction between real science and pseudoscience, censorship, the population explosion, technophobia, the social consequences of technological progress, cloning, the possibility of contacting extraterrestrial life, and the wonders of the cosmos. There are also thoughts on his style of writing, stories about his personal life, and recollections of family history - all written in the clear and elegant prose for which Asimov was noted.

Personhood in Science Fiction Juli L. Gittinger, 2019-10-29 This book addresses the topic of personhood—who is a “person” or “human,” and what rights or dignities does that include—as it has been addressed through the lens of science fiction. Chapters include discussions of consciousness and the soul, artificial intelligence, dehumanization and othering, and free will. Classic and modern sci-fi texts are engaged, as well as film and television. This book argues that science fiction allows us to examine the profound question of personhood through its speculative and imaginative nature, highlighting issues that are already visible in our present world.

Songs in the Key of Z Irwin Chusid, 2000 Irwin Chusid profiles a number of outsider musicians - those who started as outside and eventually came in when the listening public caught up with their radical ideas. Included are The Shaggs, Tiny Tim, Syd Barrett, Joe Meek, Captain Beefheart, The Cherry Sisters, Daniel Johnston, Harry Partch, Wesley Willis, and others.

Brian Eno Eric Enno Tamm, 1995-08-22 Musician, composer, producer: Brian Eno is unique in contemporary music. Best known in recent years for producing U2's sensational albums, Eno began his career as a synthesizer player for Roxy Music. He has since released many solo albums, both rock and ambient, written music for film and television

soundtracks, and collaborated with David Bowie, David Byrne, Robert Fripp, and classical and experimental composers. His pioneering ambient sound has been enormously influential, and without him today's rock would have a decidedly different sound. Drawing on Eno's own words to examine his influences and ideas, this book—featuring a new afterword and an updated discography and bibliography—will long remain provocative and definitive.

Perception and Discovery Norwood Russell Hanson, 2018-05-29 Norwood Russell Hanson was one of the most important philosophers of science of the post-war period. Hanson brought Wittgensteinian ordinary language philosophy to bear on the concepts of science, and his treatments of observation, discovery, and the theory-ladenness of scientific facts remain central to the philosophy of science. Additionally, Hanson was one of philosophy's great personalities, and his sense of humor and charm come through fully in the pages of *Perception and Discovery*. *Perception and Discovery*, originally published in 1969, is Hanson's posthumous textbook in philosophy of science. The book focuses on the indispensable role philosophy plays in scientific thinking. *Perception and Discovery* features Hanson's most complete and mature account of theory-laden observation, a discussion of conceptual and logical boundaries, and a detailed treatment of the epistemological features of scientific research and scientific reasoning. This book is of interest to scholars of philosophy of science, particularly those concerned with Hanson's thought and the development of the discipline in the middle of the 20th century. However, even fifty years after Hanson's early death, *Perception and Discovery* still has a great deal to offer all readers interested in science.

The Varieties of Scientific Experience Carl Sagan, 2006-11-02 “Ann Druyan has unearthed a treasure. It is a treasure of reason, compassion, and scientific awe. It should be the next book you read.” —Sam Harris, author of *The End of Faith* “A stunningly valuable legacy left to all of us by a great human being. I miss him so.” —Kurt Vonnegut Carl Sagan's prophetic vision of the tragic resurgence of fundamentalism and the hope-filled potential of the next great development in human spirituality The late great astronomer and astrophysicist describes his personal search to understand the nature of the sacred in the vastness of the cosmos. Exhibiting a breadth of intellect nothing short of astounding, Sagan presents his views on a wide range of topics, including the likelihood of intelligent life on other planets, creationism and so-called intelligent design, and a new concept of science as informed worship. Originally presented at the centennial celebration of the famous Gifford Lectures in Scotland in 1985 but never published, this book offers a unique encounter with one of the most remarkable minds of the twentieth century.

The Evolution of The Milky Way Francesca Matteucci, Franco Giovannelli, 2012-12-06 This review of the most up-to-date observational and theoretical information concerning the chemical evolution of the Milky Way compares the abundances derived from field stars and clusters, giving information on the abundances and dynamics of gas.

What Science Is and How It Works Gregory N. Derry, 2002-03-04 How does a scientist go about solving problems? How do scientific discoveries happen? Why are cold fusion and parapsychology different from mainstream science? What is a scientific worldview? In this lively and wide-ranging book, Gregory Derry talks about these and other

questions as he introduces the reader to the process of scientific thinking. From the discovery of X rays and semiconductors to the argument for continental drift to the invention of the smallpox vaccine, scientific work has proceeded through honest observation, critical reasoning, and sometimes just plain luck. Derry starts out with historical examples, leading readers through the events, experiments, blind alleys, and thoughts of scientists in the midst of discovery and invention. Readers at all levels will come away with an enriched appreciation of how science operates and how it connects with our daily lives. An especially valuable feature of this book is the actual demonstration of scientific reasoning. Derry shows how scientists use a small number of powerful yet simple methods--symmetry, scaling, linearity, and feedback, for example--to construct realistic models that describe a number of diverse real-life problems, such as drug uptake in the body, the inner workings of atoms, and the laws of heredity. Science involves a particular way of thinking about the world, and Derry shows the reader that a scientific viewpoint can benefit most personal philosophies and fields of study. With an eye to both the power and limits of science, he explores the relationships between science and topics such as religion, ethics, and philosophy. By tackling the subject of science from all angles, including the nuts and bolts of the trade as well as its place in the overall scheme of life, the book provides a perfect place to start thinking like a scientist.

The 12th Planet Zecharia Sitchin, 1991-05-01 Over the years, startling evidence has been unearthed, challenging established notions of the origins of Earth and life on it, and suggesting the existence of a superior race of beings who once inhabited our world. The product of thirty years of intensive research, *The 12th Planet* is the first book in Zecharia Sitchin's prophetic *Earth Chronicles* series--a revolutionary body of work that offers indisputable documentary proof of humanity's extraterrestrial forefathers. Travelers from the stars, they arrived eons ago, and planted the genetic seed that would ultimately blossom into a remarkable species...called Man. *The 12th Planet* brings to life the Sumerian civilization, presenting millennia-old evidence of the existence of Nibiru, the home planet of the Anunnaki, and of the landings of the Anunnaki on Earth every 3,600 years, and reveals a complete history of the solar system as told by these early visitors from another planet. Zecharia Sitchin's *Earth Chronicles* series, with millions of copies sold worldwide, deal with the history and prehistory of Earth and humankind. Each book in the series is based upon information written on clay tablets by the ancient civilizations of the Near East. The series is offered here, for the first time, in highly readable, hardbound collector's editions with enhanced maps and diagrams.
