Junkers Ju 287 Uwe W Jack,2020-08-24 This is the story of an aircraft that might have changed the air-war in 1945/46. Lots of photos, drawings, information, data and more than 6000 words give a detailed insight into the development of this unique piece of aviation. When US troops in May 1945 moved into the Junkers aviation works in East Germany, they discovered two very unusual aircraft with forward-swept wings. They marveled at the first two prototypes for the Luftwaffe's new long-range jet- bomber - and handed them over to the Russians. The Junkers documents on swept wings found there, changed the aviation industry of the USA, the United Kingdom, Russia, and other nations. Boeing immediately modified the design of its B-47 and B-52 under development. The Russians build further prototypes and learned much from this advanced aircraft. Uwe W. Jack in 1990 discovered documents that proved that all other publication to date on this aircraft had been wrong. He met the chief test pilot of Junkers, who had flown the prototype of the Ju 287 and got first-hand information on its behavior in the air. Uwe W. Jack shared his knowledge liberally with other authors - but now publishes his version. Don't miss the first part of the series - Aerospace History Files 01 !

Flying beyond the stall Douglas A. Joyce,2014 The X-31 Enhanced Fighter Maneuverability Demonstrator was unique among experimental aircraft. A joint effort of the United States and Germany, the X-31 was the only X-plane to be designed, manufactured, and flight tested as an international collaboration. It was also the only X-plane to support two separate test programs conducted years apart, one administered largely by NASA and the other by the U.S. Navy, as well as the first X-plane ever to perform at the Paris Air Show. *Flying Beyond the Stall* begins by describing the government agencies and private-sector industries involved in the X-31 program, the genesis of the supermaneuverability concept and its initial design breakthroughs, design and

fabrication of two test airframes, preparation for the X-31's first flight, and the first flights of Ship #1 and Ship #2. Subsequent chapters discuss envelope expansion, handling qualities (especially at high angles of attack), and flight with vectored thrust. The book then turns to the program's move to NASA's Dryden Flight Research Center and actual flight test data. Additional tasking, such as helmet-mounted display evaluations, handling quality studies, aerodynamic parameter estimation, and a tailless study are also discussed. The book describes how, in the aftermath of a disastrous accident with Ship #1 in 1995, Ship #2 was prepared for its outstanding participation in the Paris Air Show. The aircraft was then shipped back to Edwards AFB and put into storage until the late 1990s, when it was refurbished for participation in the U. S. Navy's VECTOR program. The book ends with a comprehensive discussion of lessons learned and includes an Appendix containing detailed information.

Aviation Systems Andreas Wittmer, Thomas Bieger, Roland Müller, 2011-08-17 This book aims to provide comprehensive coverage of the field of air transportation, giving attention to all major aspects, such as aviation regulation, economics, management and strategy. The book approaches aviation as an interrelated economic system and in so doing presents the "big picture" of aviation in the market economy. It explains the linkages between domains such as politics, society, technology, economy, ecology, regulation and how these influence each other. Examples of airports and airlines, and case studies in each chapter support the application-oriented approach. Students and

researchers in business administration with a focus on the aviation industry, as well as professionals in the industry looking to refresh or broaden their knowledge of the field will benefit from this book.

Sweeping Forward ,2013 The X-29 was an unusual aircraft with a truly unique silhouette. It combined many features that challenged the technologies of its day and represented special problems for the developers and the team of testers responsible for documenting its features and design goals. This book is a look at the big picture of what this team accomplished in a relatively fast-paced test program involving the truly unique X-29.

Romans at War Simon Elliott,2020-11-25 A comprehensive guide to this remarkable ancient fighting force: “Groundbreaking insights into the Roman military . . . sumptuously illustrated.” —Love Reading The Roman military machine was pre-eminent in ancient times, projecting power across the known world over a vast chronology, and an increasingly huge and diverse geography. One of the most powerful instruments of war in the history of conflict, it proved uniquely adept at learning from setbacks, always coming back the stronger for it. In so doing, it displayed two of the most important traits associated with the world of Rome. Firstly grit, that key ability to remain steadfast and to overcome adversity even in the most challenging of circumstances, as faced for example by the Republic in the Second Punic War against Hannibal. Secondly, the ability to copy the successful technical and tactical innovations of their enemies, enabling the Roman military to always stay one step ahead of its opponents on campaign and in battle. In this grand tour, covering every aspect of the Roman military, leading expert Dr. Simon Elliott first provides a detailed background to the Roman Republic and Empire to provide context for all that follows. He then looks specifically at the Roman military in its three key chronological phases: the Republic, the Principate Empire, and the Dominate

Empire. Next he forensically examines specific instances of the Roman military on campaign and in battle, and of its engineering prowess. Finally, he investigates the many enemies faced by the Roman Republic and Empire. This all provides a firm structure to enable the reader to come to grips with this incredible military machine, one whose exploits still resonate in the world to this very day.

Computers Take Flight: A History of NASA's Pioneering Digital Fly-By-Wire Project James E. Tomayko,2000

Airlines and Air Mail F. Robert van der Linden,2014-07-11

Conventional wisdom credits only entrepreneurs with the vision to create America's commercial airline industry and contends that it was not until Roosevelt's Civil Aeronautics Act of 1938 that federal airline regulation began. In *Airlines and Air Mail*, F. Robert van der Linden persuasively argues that Progressive republican policies of Herbert Hoover actually fostered the growth of American commercial aviation. Air mail contracts provided a critical indirect subsidy and a solid financial foundation for this nascent industry. Postmaster General Walter F. Brown used these contracts as a carrot and a stick to ensure that the industry developed in the public interest while guaranteeing the survival of the pioneering companies. Bureaucrats, entrepreneurs, and politicians of all stripes are thoughtfully portrayed in this thorough chronicle of one of America's most resounding successes, the commercial aviation industry.

[The Encyclopedia of Aerodynamics](#) Frank Hitchens,2015-11-25

The Encyclopedia of Aerodynamics was written for pilots at all levels from private pilot to airline pilot, military pilots and students of aerodynamics as a complete reference manual to aerodynamic terminology. General aerodynamic text books for pilots are relatively limited in their scope while aerodynamic text books for engineering students involve complex calculus. The references in this book, The Encyclopedia of Aerodynamics, are clearly described and only basic algebra is used in a few references but is

completely devoid of any calculus - an advantage to many readers. Over 1400 references are included with alternative terms used where appropriate and cross-referenced throughout. The text is illustrated with 178 photographs and 96 diagrams. The Encyclopedia of Aerodynamics is an ideal aerodynamic reference manual for any pilot's bookshelf.

To Save A City: The Berlin Airlift, 1948-1949 [Illustrated Edition] Roger G. Miller, 2015-11-06 Includes 30 Illustrations In this expert survey Air Force Historian Robert Miller explores the Epic story of the Berlin Airlift, the confrontation of Democracy and

Communism as the world teetered on the brink of the Third World War. The Berlin blockade (24 June 1948;-12 May 1949) was one of the first major international crises of the Cold War. During the multinational occupation of post-World War II Germany, the Soviet Union blocked the Western Allies' railway, road, and canal access to the sectors of Berlin under allied control. The Soviets offered to drop the blockade if the Western Allies withdrew the newly introduced Deutschmark from West Berlin. In response, the Western Allies organised the Berlin airlift to carry supplies to the people in West Berlin. Aircrews from the United States Air Force, the British Royal Air Force, the Royal Canadian Air Force, the Royal Australian Air Force, the Royal New Zealand Air Force, and the South African Air Force flew over 200,000 flights in one year, providing up to 8,893 tons of necessities daily, such as fuel and food, to the Berliners. Neither side wanted a war; the Soviets did not disrupt the airlift. By the spring of 1949 the airlift was clearly succeeding, and by April it was delivering more cargo than had previously been transported into the city by rail. On 11 May 1949, the USSR lifted the blockade of West Berlin. The Berlin Crisis of 1948-1949 served to highlight competing ideological and economic visions for post-war Europe, particularly Germany. The clash ultimately led to the division of that country into East and West and to the division of Berlin itself.

Battle for the Ruhr Derek S. Zumbro, 2006 Derek Zumbro chronicles this key military campaign from a unique and fresh perspective - that of the defeated German soldiers and civilians

caught in the final maelstrom of the war's western front. Zumbro chronicles the relentless assault on the Ruhr Pocket through German eyes, as the Allied juggernaut battered the region's cities, villages, and homes into submission. He tells of children pressed into service by a desperate Nazi regime - and of even more desperate parents trying to save their sons from sacrifice at the eleventh hour. He also tells of unspeakable conditions suffered by foreign laborers, POWs, and political opponents in the Ruhr Valley and of the mass graves that gave Allied soldiers a grisly new understanding of their enemy. Zumbro also recounts the story of Field Marshal Walter Model's final hours. His eventual suicide effectively ended the existence of the Wehrmacht's once-formidable Army Group B after being pursued, methodically encircled, and finally destroyed by U.S. and British forces. Through interviews with surviving members of Model's former staff, Zumbro has uncovered the attitudes of beleaguered officers that official records could never convey. Other interviews with former soldiers reveal the extent to which Allied bombing contributed to the rapid deterioration of German combat effectiveness and tell of civilians begging soldiers to abandon the war. Zumbro's research reveals the identities of specific characters discussed in previous works but never identified, describes the final hours of German officers executed for the loss of the bridge at Remagen, and offers new insight into Model's acquiescence to Hitler in military affairs.--BOOK JACKET.
