World Development Report 2009 World Bank, 2008-11-04 Rising densities of human settlements, migration and transport to reduce distances to market, and specialization and trade facilitated by fewer international divisions are central to economic development. The transformations along these three dimensions density, distance, and division are most noticeable in North America, Western Europe, and Japan, but countries in Asia and Eastern Europe are changing in ways similar in scope and speed. 'World Development Report 2009: Reshaping Economic Geography' concludes that these spatial transformations are essential, and should be encouraged. The conclusion is not without controversy. Slum-dwellers now number a billion, but the rush to cities continues. Globalization is believed to benefit many, but not the billion people living in lagging areas of developing nations. High poverty and mortality persist among the world's 'bottom billion', while others grow wealthier and live longer lives. Concern for these three billion often comes with the prescription that growth must be made spatially balanced. The WDR has a different message: economic growth is seldom balanced, and efforts to spread it out

prematurely will jeopardize progress. The Report: documents how production becomes more concentrated spatially as economies grow. proposes economic integration as the principle for promoting successful spatial transformations. revisits the debates on urbanization, territorial development, and regional integration and shows how today's developers can reshape economic geography.

In the Realm of the Diamond Queen Anna Lowenhaupt Tsing, 2021-04-13 In this highly original and much-anticipated ethnography, Anna Tsing challenges not only anthropologists and

feminists but all those who study culture to reconsider some of their dearest assumptions. By choosing to locate her study among Meratus Dayaks, a marginal and marginalized group in the deep rainforest of South Kalimantan, Indonesia, Tsing deliberately sets into motion the familiar and stubborn urban fantasies of self and other. Unusual encounters with her remarkably creative and unconventional Meratus friends and teachers, however, provide the opportunity to rethink notions of tradition, community, culture, power, and gender--and the doing of anthropology. Tsing's masterful weaving of ethnography and theory, as well as her humor and lucidity, allow for an extraordinary reading experience for students, scholars, and anyone interested in the complexities of culture. Engaging Meratus in wider conversations involving Indonesian bureaucrats, family planners, experts in international development, Javanese soldiers, American and French feminists, Asian-Americans, right-to-life advocates, and Western intellectuals, Tsing looks not for consensus and coherence in Meratus culture but rather allows individual Meratus men and women to return our gaze. Bearing the fruit from the lively contemporary conversations between anthropology and cultural studies, *In the Realm of the Diamond Queen* will prove to be a model for thinking and writing about gender, power, and the politics of identity.

Optimal State Estimation Dan Simon, 2006-06-19 A bottom-up approach that enables readers to master and apply the latest techniques in state estimation This book offers the best mathematical

approaches to estimating the state of a general system. The author presents state estimation theory clearly and rigorously, providing the right amount of advanced material, recent research results, and references to enable the reader to apply state estimation techniques confidently across a variety of fields in science and engineering. While there are other textbooks that treat state estimation, this one offers special features and a unique perspective and pedagogical approach that speed learning:

- * Straightforward, bottom-up approach begins with basic concepts and then builds step by step to more advanced topics for a clear understanding of state estimation
- * Simple examples and problems that require only paper and pen to solve lead to an intuitive understanding of how theory works in practice
- * MATLAB(r)-based source code that corresponds to examples in the book, available on the author's Web site, enables readers to recreate results and experiment with other simulation setups and parameters

Armed with a solid foundation in the basics, readers are presented with a careful treatment of advanced topics, including unscented filtering, high order nonlinear filtering, particle filtering, constrained state estimation, reduced order filtering, robust Kalman filtering, and mixed Kalman/H ∞ filtering. Problems at the end of each chapter include both written exercises and computer exercises. Written exercises focus on improving the reader's understanding of theory and key concepts, whereas computer exercises help readers apply theory to problems similar to ones they are likely to encounter in industry. With its

expert blend of theory and practice, coupled with its presentation of recent research results, Optimal State Estimation is strongly recommended for undergraduate and graduate-level courses in optimal control and state estimation theory. It also serves as a reference for engineers and science professionals across a wide array of industries.

Friction Anna Lowenhaupt Tsing, 2011-10-23 A wheel turns because of its encounter with the surface of the road; spinning in the air it goes nowhere. Rubbing two sticks together produces heat and light; one stick alone is just a stick. In both cases, it is friction that produces movement, action, effect. Challenging the widespread view that globalization invariably signifies a clash of cultures, anthropologist Anna Tsing here develops friction in its place as a metaphor for the diverse and conflicting social interactions that make up our contemporary world. She focuses on one particular zone of awkward engagement--the rainforests of Indonesia--where in the 1980s and the 1990s capitalist interests increasingly reshaped the landscape not so much through corporate design as through awkward chains of legal and illegal entrepreneurs that wrested the land from previous claimants, creating resources for distant markets. In response, environmental movements arose to defend the rainforests and the communities of people who live in them. Not confined to a village, a province, or a nation, the social drama of the Indonesian rainforest includes local and national environmentalists, international science, North American investors,

advocates for Brazilian rubber tappers, UN funding agencies, mountaineers, village elders, and urban students, among others--all combining in unpredictable, messy misunderstandings, but misunderstandings that sometimes work out. Providing a portfolio of methods to study global interconnections, Tsing shows how curious and creative cultural differences are in the grip of worldly encounter, and how much is overlooked in contemporary theories of the global.

Aspects on Fundamentals and Applications of Conducting Polymers Artur Motheo, 2012-01-20 Since the establishment of the conductive properties of intrinsic conductive polymers, a huge variety of basic and applied research has been carried out, involving different polymers, copolymers, blends, mixtures and composites. Thus, fundamental understanding of physical and chemical properties of these materials has been sought, while the applied aspects have advanced very rapidly, crossing the boundaries between disciplines. Today, the applications of conducting polymers in various fields such as neuroscience, nanotechnology and green chemistry, are easily found. This development is dynamic and it needs to be updated and hence the motivation for the set of results presented in this book; which provides information about the development of fundamentals, and about some applications of conductive polymers.

Alternative Splicing and Disease Philippe Jeanteur, 2006-10-04 Splicing of primary RNA transcript is a quasi-systematic step of gene expression in higher organisms. This is the first

book to highlight the medical implications, i.e. diseases, caused by alternative splicing. Alternative splicing not only vastly increases protein diversity but also offers numerous opportunities for aberrant splicing events with pathological consequences. The book also outlines possible targets for therapy.

Return Biao Xiang, Brenda S. A. Yeoh, Mika Toyota, 2013-10-10 Since the late 1990s, Asian nations have increasingly encouraged, facilitated, or demanded the return of emigrants. In this interdisciplinary collection, distinguished scholars from countries around the world explore the changing relations between nation-states and transnational mobility. Taking into account illegally trafficked migrants, deportees, temporary laborers on short-term contracts, and highly skilled émigrés, the contributors argue that the figure of the returnee energizes and redefines nationalism in an era of increasingly fluid and indeterminate national sovereignty. They acknowledge the diversity, complexity, and instability of reverse migration, while emphasizing its discursive, policy, and political significance at a moment when the tensions between state power and transnational subjects are particularly visible. Taken together, the essays foreground Asia as a useful site for rethinking the intersections of migration, sovereignty, and nationalism. Contributors. Sylvia Cowan, Johan Lindquist, Melody Chia-wen Lu, Koji Sasaki, Shin Hyunjoon, Mariko Asano Tamanoi, Mika Toyota, Carol Upadhyia, Wang Cangbai, Xiang Biao, Brenda S. A. Yeoh

Altered Traits Daniel Goleman, Richard J. Davidson, 2018-09-04 Two New York Times–bestselling authors unveil new research showing what meditation can really do for the brain. In the last twenty years, meditation and mindfulness have gone from being kind of cool to becoming an omnipresent Band-Aid for fixing everything from your weight to your relationship to your achievement level. Unveiling here the kind of cutting-edge research that has made them giants in their fields, Daniel Goleman and Richard Davidson

show us the truth about what meditation can really do for us, as well as exactly how to get the most out of it. Sweeping away common misconceptions and neuromythology to open readers' eyes to the ways data has been distorted to sell mind-training methods, the authors demonstrate that beyond the pleasant states mental exercises can produce, the real payoffs are the lasting personality traits that can result. But short daily doses will not get us to the highest level of lasting positive change—even if we continue for years—without specific additions. More than sheer hours, we need smart practice, including crucial ingredients such as targeted feedback from a master teacher and a more spacious, less attached view of the self, all of which are missing in widespread versions of mind training. The authors also reveal the latest data from Davidson's own lab that point to a new methodology for developing a broader array of mind-training methods with larger implications for how we can derive the greatest benefits from the practice. Exciting, compelling, and grounded in new research, this is one of those rare books that has the power to change us at the deepest level.

Primates Kurt Benirschke, 2012-12-06 This conference represents the first time in my life when I felt it was a misfortune, rather than a major cause of my happiness, that I do conservation work in New Guinea. Yes, it is true that New Guinea is a fascinating microcosm, it has fascinating birds and people, and it has large expanses of undisturbed rainforest. In the course of my work there, helping the Indonesian government and World Wildlife Fund set up a

comprehensive national park system, I have been able to study animals in areas without any human population. But New Guinea has one serious drawback: it has no primates, except for humans. Thus, I come to this conference on primate conservation as an underprivileged and emotionally deprived observer, rather than as an involved participant. Nevertheless, it is easy for anyone to become interested in primate conservation. The public cares about primates. More specifically, to state things more realistically, many people care some of the time about some primates. Primates are rivaled only by birds, pandas, and the big cats in their public appeal. For some other groups of animals, the best we can say is that few people care about them, infrequently. For most groups of animals, no one cares about them, ever.

Faith-Based Organizations in Development Discourses and Practice Jens Koehrsen, Andreas Heuser, 2019-11-28 Exploring faith-based organizations (FBOs) in current developmental discourses and practice, this book presents a selection of empirical in-depth case-studies of Christian FBOs and assesses the vital role credited to FBOs in current discourses on development. Examining the engagement of FBOs with contemporary politics of development, the contributions stress the agency of FBOs in diverse contexts of development policy, both local and global. It is emphasised that FBOs constitute boundary agents and developmental entrepreneurs: they move between different discursive fields such as national and international development discourses, theological discourses, and their

specific religious constituencies. By combining influxes from these different contexts, FBOs generate unique perspectives on development: they express alternative views on development and stress particular approaches anchored in their theological social ethics. This book should be of interest to those researching FBOs and their interaction with international organizations, and to scholars working in the broader areas of religion and politics and politics and development.
