Handbook of Paper and Board Herbert Holik, 2013-03-25

Papermaking is a fascinating art and technology. The second edition of this successful 2 volume handbook provides a comprehensive view on the technical, economic, ecologic and social background of paper and board. It has been updated, revised and largely extended in depth and width including the further use of paper and board in converting and printing. A wide knowledge basis is a prerequisite in evaluating and optimizing the whole process chain to ensure efficient paper and board production. The same is true in their application and end use. The book covers a wide range of topics: * Raw materials required for paper and board manufacturing such as fibers, chemical additives and fillers * Processes and machinery applied to prepare the stock and to produce the various paper and board grades including automation and trouble shooting * Paper converting and printing processes, book preservation * The different paper and board grades as well as testing and analysing fiber suspensions, paper and board products, and converted or printed matters * Environmental and energy factors as well as safety aspects. The handbook will provide professionals in the field, e. g. papermakers as well as converters and printers, laymen, students, politicians and other interested people with the most up-to-date and comprehensive information on the state-of- the-art techniques and aspects involved in paper making, converting and printing.

Porous Polymers Michael S. Silverstein, Neil R. Cameron, Marc A. Hillmyer, 2011-04-19 This book gathers the various aspects of the porous polymer field into one volume. It not only presents a

fundamental description of the field, but also describes the state of the art for such materials and provides a glimpse into the future. Emphasizing a different aspect of the ongoing research and development in porous polymers, the book is divided into three sections: Synthesis, Characterization, and Applications. The first part of each chapter presents the basic scientific and engineering principles underlying the topic, while the second part presents the state of the art results based on those principles. In this fashion, the book connects and integrates topics from seemingly disparate fields, each of which embodies different aspects inherent in the diverse field of porous polymeric materials.

The Vision and the Voice Aleister Crowley, 2019-11-24

Aleister Crowley was a noted and controversial occultist, ceremonial magician and poet. He has been called the wickedest man in the world or The Great Beast 666 or The Master Therion but he remained a highly influential figure over Western esotericism and the counterculture. This book contains his visions in the Sahara of the 30 Aethyres of the Enochian Magick. Of all his works, Crowley considered this book to be second in importance behind The Book of the Law. This is a valuable book to anyone interested in occult studies. Complete text and Footnotes (>800) by Aleister Crowley Excerpt: The Cry of the 27th Aethyr Which is Called ZAA There is an angel with rainbow wings, and his dress is green with silver, a green veil over silver armour. Flames of many-coloured fire dart from him in all directions. It is a woman of some thirty years old, and she has the moon for a crest, and the moon is blazoned on her heart, and her sandals are curved silver, like the moon. And she cries: Lonely am I and cold in the wilderness of the stars. For I am the queen of all them that dwell in Heaven, and the queen of all them that are pure upon earth, and the queen of all the sorcerers of hell. I am the daughter of Nuit, the lady of the stars. And I am the Bride of them that are vowed unto loneliness. And I am the mother of the Dog Cerberus. One person am I, and three gods. And thou who hast blasphemed me shalt suffer knowing me. For I am cold as thou art cold, and burn with thy fire.

Oh, when shall the war of the Aires and the elements be accomplished?

So far in the twenty-first century, there have been many developments in our understanding of materials' behaviour and in their technology and use. This new edition has been expanded to cover recent developments such as the use of glass as a structural material. It also now examines the contribution that material selection makes to sustainable construction practice, considering the availability of raw materials, production, recycling and reuse, which all contribute to the life cycle assessment of structures. As well as being brought up-to-date with current usage and performance standards, each section now also contains an extra chapter on recycling. Covers the following materials: metals concrete ceramics (including bricks and masonry) polymers fibre composites bituminous materials timber glass. Achtung-Panzer! Heinz Guderian, 1995 This is one of the most significant military books of the twentieth century. By an outstanding soldier of independent mind, it pushed forward the evolution of land warfare and was directly responsible for German armoured supremacy in the early years of the Second World War. Published in 1937, the result of 15 years of careful study since his days on the German General Staff in the First World War, Guderian's book argued, quite clearly, how vital the proper use of tanks and supporting armoured vehicles would be in the conduct of a future war. When that war came, just two years later, he proved it, leading his Panzers with distinction in the Polish, French and Russian campaigns. Panzer warfare had come of age, exactly as he had forecast. This first English translation of Heinz Guderian's classic book - used as a textbook by Panzer officers in the war - has an introduction and extensive background notes by the modern English historian Paul Harris.
