Design for Embedded Image Processing on FPGAs

Donald G. Bailey, 2011-06-13 Dr Donald Bailey starts with introductory material considering the problem of embedded image processing, and how some of the issues may be solved using parallel hardware solutions. Field programmable gate arrays (FPGAs) are introduced as a technology that provides flexible, fine-grained hardware that can readily exploit parallelism within many image processing algorithms. A brief review of FPGA programming languages provides the link between a software mindset normally associated with image processing algorithms, and the hardware mindset required for efficient utilization of a parallel hardware design. The design process for implementing an image processing algorithm on an FPGA is compared with that for a conventional software implementation, with the key differences highlighted. Particular attention is given to the techniques for mapping an algorithm onto an FPGA implementation, considering timing, memory bandwidth and resource constraints, and efficient hardware computational techniques. Extensive coverage is given of a range of low and intermediate level image processing operations, discussing efficient implementations and how these may vary according to the application. The techniques are illustrated with several example applications or case studies from projects or applications he has been involved with. Issues such as interfacing between the FPGA and peripheral devices are covered briefly, as is designing the system in such a way that it can be more readily debugged and tuned. Provides a bridge between algorithms and hardware Demonstrates how to avoid many of the potential pitfalls Offers practical recommendations and solutions Illustrates several real-world applications and case studies Allows those with software backgrounds to understand efficient hardware implementation Design for Embedded Image Processing on FPGAs is ideal for researchers and engineers in the vision or image

processing industry, who are looking at smart sensors, machine vision, and robotic vision, as well as FPGA developers and application engineers. The book can also be used by graduate students studying imaging systems, computer engineering, digital design, circuit design, or computer science. It can also be used as supplementary text for courses in advanced digital design, algorithm and hardware implementation, and digital signal processing and applications. A Bit of My Mind ,1872

Story of My People Edoardo Nesi, 2013-05-07 Winner of the 2011 Strega Prize, this blend of essay, social criticism, and memoir is a striking portrait of the effects of globalization on Italy's declining economy. Starting from his family's textile factory in Prato, Tuscany, Edoardo Nesi examines the recent shifts in Italy's manufacturing industry. Only one generation ago, Prato was a thriving industrial center that prided itself on craftsmanship and quality. But during the last decade, cheaply made

goods—produced overseas or in Italy by poorly paid immigrants—saturated the market, making it impossible for Italian companies to keep up. In 2004 his family was forced to sell the textile factory. How this could have happened? Nesi asks, and what are the wider repercussions of losing businesses like his family's, especially for Italian culture? *Story of My People* is a denouncement of big business, corrupt politicians, the arrogance of economists, and cheap manufacturing. It's a must-read for anyone seeking insight into the financial crisis that's striking Europe today.

Hands-On Vision and Behavior for Self-Driving Cars Luca Venturi, Krisztof Korda, 2020-10-23 A practical guide to learning visual perception for self-driving cars for computer vision and autonomous system engineers

Key Features Explore the building blocks of the visual perception system in self-driving cars Identify objects and lanes to define the boundary of driving surfaces using open-source tools like OpenCV and Python Improve the object detection and classification capabilities of systems with the help of neural networks

Book Description The visual perception capabilities of a self-driving car are powered by computer vision. The work relating to self-driving cars can be broadly classified into three components - robotics, computer vision, and machine learning. This book provides existing computer vision engineers and developers with the unique opportunity to be associated with this booming field. You will learn about computer vision, deep learning, and depth perception applied to driverless cars. The book provides a structured and thorough introduction, as making a real self-driving car is a huge cross-functional effort. As you progress, you will cover relevant cases with working code, before going on to understand how to use OpenCV, TensorFlow and Keras to analyze video streaming from car cameras. Later, you will learn how to interpret and make the most of lidars (light detection and ranging) to identify obstacles and localize your position. You'll even be able to tackle core challenges in self-driving cars such as finding lanes,

detecting pedestrian and crossing lights, performing semantic segmentation, and writing a PID controller. By the end of this book, you'll be equipped with the skills you need to write code for a self-driving car running in a driverless car simulator, and be able to tackle various challenges faced by autonomous car engineers. What you will learn

Understand how to perform camera calibration

Become well-versed with how lane detection works in self-driving cars using OpenCV

Explore behavioral cloning by self-driving in a video-game simulator

Get to grips with using lidars

Discover how to configure the controls for autonomous vehicles

Use object detection and semantic segmentation to locate lanes, cars, and pedestrians

Write a PID controller to control a self-driving car running in a simulator

Who this book is for

This book is for software engineers who are interested in learning about technologies that drive the autonomous car revolution. Although basic knowledge of computer vision and Python programming is required, prior knowledge of advanced deep learning and how to use sensors (lidar) is not needed.

Proteomics in Practice Reiner Westermeier, Tom Naven, Hans-Rudolf Höpker, 2008-09-08 Still the only concise practical guide to laboratory experiments in proteomics, this new edition now also covers DIGE technology and liquid-chromatography, while the troubleshooting section has been considerably extended. Adopting a practical approach, the authors present the relevant techniques and explain the route to successful experimental design and optimal method selection. They cover such electrophoretic techniques as isoelectric focusing, SDS page, 2-D page, and DIGE, as well as liquid-chromatography techniques, such as ion exchange, affinity chromatography and reversed-phase HPLC. Mass-spectrometric techniques include MALDI, ESI, and FT ICR. Generously illustrated, partly in color, the book also features updates of protocols as well as animations illustrating crucial methodological steps on a companion website.

Crash Course Paul Ingrassia, 2011-01-11 “A definitive account . . . It’s hard to imagine anyone better than Paul Ingrassia to ‘ride shotgun’ on a journey through the sometimes triumphant, often turbulent, history of U.S. automaking. . . . [A] wealth of amusing, astonishing and enlightening nuggets.”—Pittsburgh Tribune-Review This is the epic saga of the American automobile industry’s rise and demise, a compelling story of hubris, missed opportunities, and self-inflicted wounds that culminates with the president of the United States ushering two of Detroit’s Big Three car companies—once proud symbols of prosperity—through bankruptcy. With unprecedented access, Pulitzer Prize winner Paul Ingrassia takes us from factory floors to small-town dealerships to Detroit’s boardrooms to the White House. Ingrassia answers the big questions: Was Detroit’s self-destruction inevitable? Why did Japanese automakers manage American workers better than the American companies themselves did? Complete with a new Afterword providing fresh insights into the continuing upheaval in

the auto industry—the travails of Toyota, the revolving-door management and IPO at General Motors, the unexpected progress at Chrysler, and the Obama administration’s stake in Detroit’s recovery—Crash Course addresses a critical question: America bailed out GM, but who will bail out America? With an updated Afterword by the author Praise for Crash Course “In order to understand just how much of a mess it was—not to mention how it got that way and how, if at all, it can be cleaned up—you really need to read Crash Course.”—The Washinton Post “Ingrassia tells Detroit’s story with economy, vigour and restrained fury.”—The Economist “A delightful mix of history and first-person reporting . . . Employing superb storytelling skills, Ingrassia explains in head-shaking detail the elements of a wholly avoidable collision.”—Kirkus Reviews (starred review)
