French Secret Projects 3: French & European Spaceplane Designs 1964–1994 Jean-Christophe Carbonel,2021-10-07 In 1963, Eugen Sanger, became head of the Eurospace organization which promoted the 'AeroSpace Transporter'. In response to a Eurospace call, aircraft makers in France, Germany and UK designed recoverable, winged spacecraft. From 1964 to 1970 the French government led studies to evaluate the feasibility of the concept. Those studies, under the leadership of the French Centre National d'Etudes Spatiales (CNES), coalesced into the Hermes spaceplane which was then adopted by the European Space Agency. In parallel, Germany and UK proposed fully recoverable designs while other countries, including Japan, India and Russia came to CNES to share ideas about spaceplane design. Unfortunately Hermes was never launched and by 1994 was abandoned after many alternative propositions were discussed. This book relates the story of these remarkable concepts, crossovers between aircraft and spacecraft beginning with the 'antipodal bomber' of 1944 and continuing to Aerospatiale STS-2000 project through the Transporteur Aero-Spatial, VERAS, AW Pyramid, Bumerang, Sanger II, HOTOL, Hermes, and Taranis. Non-European projects like Dyna-Soar, Hyperplane, HOPE, and MAKS are also covered. It provides a fascinating and detailed account of these projects which, being half-way between aircraft and spacecraft, have hitherto often been therefore often neglected by aviation writers and historians.

Software Quality – ECSQ 2002 Jyrki Kontio,Reidar Conradi,2003-08-01 Software professionals and companies live in a new world today. Increasingly complex systems need to be built faster and cheaper. While many of the established approaches in software quality are still valid, the software quality community is going through a paradigm shift that requires a re-assessment of our current method and tool portfolio, as well as creating new and more effective solutions. We have selected two themes for this conference to highlight this paradigm shift. Our first theme, “production of attractive and reliable software at Internet speed” sums up the dilemma many software organisations face. In order to be competitive, software should contain advanced features and run reliably – yet it should be developed quickly and cost effectively for the right market window. Finding the right balance between these objectives is a critical question that will determine business success in the years to come. Our second theme, “production of software with a dynamic partnership network” highlights the current trend of using partnerships and subcontractors as integral players in the software development process. Partnerships sometimes need to be created quickly to respond to a market opportunity, yet the costs and speed of cooperation must be competitive. Different companies have different processes, quality tools and cultures, yet they should cooperate seamlessly for the best result.

Design and Development of Aircraft Systems Allan Seabridge,Ian Moir,2019-12-10 Provides a significant update to the definitive book on aircraft system design This book is written for anyone who wants to understand how industry develops the customer requirement for aircraft into a fully integrated, tested, and qualified product that is safe to fly and fit for purpose. The new edition of Design and Development of Aircraft Systems fully expands its already comprehensive coverage to include both conventional and unmanned systems. It also updates all chapters to bring them in line with current design practice and technologies taught in courses at Cranfield, Bristol, and Loughborough universities in the UK. Design and Development of Aircraft Systems, 3rd Edition begins with an introduction to the subject. It then introduces readers to the aircraft systems (airframe, vehicle, avionic, mission, and ground systems). Following that comes a chapter on the design and development process. Other chapters look at design drivers, systems architectures, systems integration, verification of system requirements, practical considerations, and configuration control. The book finishes with sections that discuss the potential impact of complexity on flight safety, key characteristics of aircraft systems, and more. Provides a holistic view of aircraft system design, describing the interactions among subsystems such as fuel, navigation, flight control, and more Substantially updated coverage of systems engineering, design drivers, systems architectures, systems integration, modelling of systems, practical considerations, and systems examples Incorporates essential new material on the regulatory environment for both manned and unmanned systems Discussion of trends towards complex systems, automation, integration and the potential for an impact on flight safety Design and Development of Aircraft Systems, 3rd Edition is an excellent book for aerospace engineers, researchers, and graduate students involved in the field.

Managing Supply Chain Risk and Vulnerability Teresa Wu,Jennifer Vincent Blackhurst,2009-08-20 Managing Supply Chain Risk and Vulnerability, a book that both practitioners and students can use to better understand and manage supply chain risk, presents topics on decision making related to supply chain risk. Leading academic researchers, as well as practitioners, have contributed chapters focusing on developing an overall understanding of risk and its relationship to supply chain performance; investigating the relationship between response time and disruption impact; assessing and prioritizing risks; and assessing supply chain resilience. Supply chain managers will find Managing Supply Chain Risk and Vulnerability a useful tool box for methods they can employ to better mitigate and manage supply chain risk. On the academic side, the book can be used to teach senior undergraduate students, as well as graduate-level students. Additionally, researchers may use the text as a reference in the area of supply chain risk and vulnerability.

Transfer of Technology for Successful Integration Into the Global Economy United Nations,UNCTAD/UNDP Programme on Globalization, Liberalization and Sustainable Human Development,2003 This publication contains three case studies which seek to disseminate information on best practices for promoting transfer of technology in developing countries, in order to help establish new industries which can successfully compete in the global economy. These studies were carried out under the UNCTAD/UNDP Programme on Globalization, Liberalization and Sustainable Human Development, and deal with aircraft manufacturing in Brazil, the pharmaceuticals sector in India and the automobile industry in South Africa.

Aerospace Marketing Management Philippe Malaval,Christophe Bénaroya,Jonathan Aflalo,2013-11-12 This book presents an overall picture of both B2B and B2C marketing strategies, concepts and tools, in the aeronautics sector. This is a significant update to an earlier book successfully published in the nineties which was released in Europe, China, and the USA. It addresses the most recent trends such as Social Marketing and the internet, Customer Orientation, Project Marketing and Concurrent Engineering, Coopetition, and Extended Enterprise. Aerospace Marketing Management is the first marketing handbook richly illustrated with executive and expert inputs as well as examples from parts suppliers, aircraft builders, airlines, helicopter manufacturers, aeronautics service providers, airports, defence and military companies, and industrial integrators (tier-1, tier-2). This book is designed as a ready reference for professionals and graduates from both Engineering and Business Schools.

Distributed Propulsion Technology Amir S. Gohardani,2014 Distributed propulsion technology is one of the revolutionary candidates for future aircraft propulsion. In this book, which serves as the very first reference book on distributed propulsion technology, the potential role of distributed propulsion technology in future aviation is investigated. Following a historical journey that revisits distributed propulsion technology in unmanned air vehicles, commercial aircrafts, and military aircrafts, features of this specific technology are highlighted in synergy with an electric aircraft concept and a first-of-its-kind comparison between commercial and military aircrafts employing distributed propulsion arrangements. In light of propulsionairframe integration and complementary technologies, such as boundary layer ingestion, thrust vectoring and circulation control, transpired opportunities and challenges are addressed in addition to a number of identified research directions

proposed for future aircrafts. Moreover, a diverse set of distributed propulsion arrangements are considered. These include: small engines, gas-driven multi-fan architectures, turboelectric systems featuring superconductive and non-superconducting electrical machine technology, and electromagnetic fans. This book features contributions by the National Aeronautics and Space Administration (NASA) and the United States Air Force (USAF), and includes the first proposed official definition for distributed propulsion technology in subsonic fixed wing aircrafts.

Smaller Satellites: Bigger Business? Michael J Rycroft, Norma Crosby, 2014-03-14 Y. Crosby, International Space University e-mail: norma@bock-crosby.fsbusines.co.uk For the sixth annual ISU Symposium the theme was Smaller Satellites: Bigger Business? Concepts, Applications and Markets for Micro/Nanosatellites in a New Information World. Thus, the Symposium addressed the crucial question: are small satellites the saviour of space programmes around the world It did this from the unique perspective of the International Space today? University - the interdisciplinary, international and intercultural perspective. This Symposium brought together a variety of people working on small satellites - engineers, scientists, planners, providers, operators, policy makers and business executives, together with representatives from regulatory bodies, from national and international organizations, and from the finance sector, and also entrepreneurs. Discussion and debate were encouraged, based on the papers presented and those published here.

Domain-driven Design Eric Evans, 2004 Domain-Driven Design incorporates numerous examples in Java-case studies taken from actual projects that illustrate the application of domain-driven design to real-world software development.

Implementing Domain-driven Design Vaughn Vernon, 2013 Vaughn Vernon presents concrete and realistic domain-driven design (DDD) techniques through examples from familiar domains, such as a Scrum-based project management application that integrates with a collaboration suite and security provider. Each principle is backed up by realistic Java examples, and all content is tied together by a single case study of a company charged with delivering a set of advanced software systems with DDD.

Foreign Direct Investment in Latin America and the Caribbean 2018 United Nations, 2019-01-30 This publication sets out and analyses the main foreign direct investment (FDI) trends in the countries of Latin America and the Caribbean. In 2017, certain trends that had already emerged in the global economic landscape became more established. In particular, announcements of potential restrictions on trade and pressures to relocate production to developed countries were confirmed. At the same time, China has taken steps to restrict outflows of foreign direct investment (FDI) in order to align these flows with its strategic plan. Adding to these factors is the expansion of digital technologies, whose international expansion requires smaller investments in tangible assets. Firms in these areas are heavily concentrated in the United States and China, which reduces the need for cross-border mergers and acquisitions.

Arming the Luftwaffe Daniel Uziel, 2011-11-16 During World War II, aviation was among the largest industrial branches of the Third Reich. About 40 percent of total German war production, and two million people, were involved in the manufacture of aircraft and air force equipment. Based on German records, Allied intelligence reports, and eyewitness accounts, this study explores the military, political, scientific and social aspects of Germany's wartime aviation industry: production, research and development, Allied attacks, foreign workers and slave labor, and daily life and working conditions in the factories. Testimony from Holocaust survivors who worked in the factories provides a compelling new perspective on the history of the Third Reich.

Space-Age Acronyms Reta C. Moser, 2012-12-06 Acronym agglomeration is an affliction of the age, and there are acronym addicts who, in their weakness, find it impossible to resist them. More than once in recent months my peers have cautioned me about my apparent readiness to use not only acronyms, but abbreviations, foreignisms, codes, and other cryptic symbols rather than common, ordinary American words. Many among us, though, either have not received or have chosen to ignore such advice. As a consequence, what we write and speak is full of mystery and confusion. It is then for the reader and listener and for the writer and speaker that Reta C. Moser has compiled this guide. Its effective application to the art of communication is urged. Such use should help avoid many of the misunderstandings involving terminology which occur daily. Although such misunderstandings are certainly crucial in humanistic and social situations, they are often of immediate import and the trigger to disaster in scientific, technical, and political situations. Some 15,000 acronyms and 25,000 definitions are provided (a 50- and 47 -percent increase over the 1964 edition!), with due credit to Miss Moser's diligence in making the compilation and with the acknowledgment that the acronymical phenomenon is very much with us. This edition, like the first, is certain to be of value to writers, librarians, editors, and others who must identify and deal with acronyms.

Returning People to the Moon After Apollo Pat Norris, 2019-06-04 July 2019 marks 50 years since Neil Armstrong took his famous first steps on the surface of the Moon. As people around the world celebrate the anniversary of this great American achievement, they might wonder why there have been no further human missions to the Moon since Apollo 17 in 1972. This book assesses the legacy of the Apollo missions based on several decades of space developments since the program's end. The question of why we haven't sent humans back to the Moon is explored through a multidisciplinary lens that weaves together technological and historical perspectives. The nine manned Apollo missions, including the six that landed on the Moon, are described here by an author who has 50 years of experience in the space industry and whose work spanned the Apollo 8-13 missions. The final section of the book provides a comprehensive assessment of today's programs and current plans for sending humans to the Moon.

Introduction to UAV Systems Paul G. Fahlstrom, Thomas J. Gleason, 2012-07-11 Unmanned aerial vehicles (UAVs) have been widely adopted in the military world over the last decade and the success of these military applications is increasingly driving efforts to establish unmanned aircraft in non-military roles. Introduction to UAV Systems, 4th edition provides a comprehensive introduction to all of the elements of a complete Unmanned Aircraft System (UAS). It addresses the air vehicle, mission planning and control, several types of mission payloads, data links and how they interact with mission performance, and launch and recovery concepts. This book provides enough information to encourage a student to learn more; to provide a specialist with a basic appreciation of the technical issues that drive other parts of the system and interact with their specialty; or to help a program manager understand system-level tradeoffs and know what questions to ask. Key features: Comprehensive overview of all elements of a UAS and of how they interact. Introduces the underlying concepts of key subsystems. Emphasizes system-integration issues and how they relate to subsystem design choices. Practical discussion of issues informed by lessons learned in UAV programs. Introduction to UAV Systems, 4th edition is written both for newcomers to the subject and for experienced members of the UAV community who desire a comprehensive overview at the system level. As well as being a primary text for an introductory course on UAS or a supplementary text in a course that goes into more depth in one of the individual technologies involved in a UAS, this book is a useful overview for practicing engineers, researchers, managers, and consultants interested in UAV systems.

Collected Scientometrics Myron Evans, 2015 This first volume of the scientifically famous Book of Scientometrics is unique in the history of science and records in great and accurate detail the meteoric impact of the first successful unified field theory in the history of science, the Einstein Cartan Evans (ECE) unified field theory. This theory has attracted about fifty million readings at the minimum off the internet since May 2002. Volume One of The Book of Scientometrics is currently

being read at the rate of 3,969 times a year from www.aias.us judging by the first eight days of April 2015. It took eleven years to compile from April 30th 2004 to present by daily monitoring with a few exceptions, for example when I was unavoidably detained at Buckingham Palace one summer day in 2010 at the invitation of my distant Tudor cousin Queen Elizabeth II. I decided to eat the cucumber sandwiches instead of doing the stats in the Garden Party. This book is a revolutionary new concept in the measurement of the impact of a theory, given the name Scientometrics. The phenomenal impact of ECE theory has been recorded in a way that the world of science has never seen before, with its obsolete reliance on citations of things that are often never read. The scientometrics in this book are very carefully filtered and accurately recorded, and are confined to the intellectual elite around the world: universities, institutes, organizations, government departments, prominent corporations, military facilities and so forth. This intellectual elite makes up a tiny 2% of the vast total readership of the theory. The data are made available in this softback for the first time. As Jeff Rense told me in a recent radio broadcast, Bob Dylan would have been proud of this.

The Grand Duke Yann,2012-12-04 The Eastern Front during WWII: Oberleutnant Wulf, a young Luftwaffe pilot, is horrified by Nazi barbarism and at odds with his fellow pilots, even as he finds himself taking to the skies to fight the infamous Night Witches – the 588th Night Bomber Regiment, the most decorated female unit in the Soviet Air Force. Motivated only by his desire to return home to his daughter, Romy, Wulf tries to survive the increasingly desperate and ferocious Eastern Front, while Lilya, the Red Witch, leads her comrades against the German invaders.
