How to Build a Model Railway David Ashwood, Market Deeping, 2022-11-08 Moving from a train set out of a box to making your own model railway can seem a daunting proposition. Whether you go your own way, wish to follow a prototype tightly or have an inherited stock that you want to make the best of. This book covers the act of deciding on a design that will keep the interest alive. Executing it in a manner that is within your skills set, and finishing it to a quality you are satisfied by within a time and financial limit. Here learning from those who have had both successes and the occasional false start will assist you in execution of your project and maintaining its interest. The book aims to explain jargon and includes such subjects as project design and planning, alternative baseboard construction methods, track laying, basic electrics accompanied by a rich and varied imagery. The Market Deeping Model railway club rose to public notice in May 2019 following the sad overnight vandalism of their annual railway show. The breaking news story became a worldwide cause célèbre bringing a whirlwind of kind support from modelers and the general public. The rebuilding of the club's damaged layouts and new projects for replacements gave the rare opportunity of experienced modelers to photograph and document the build process and revisit the basics. The results are incorporated into this book making a positive and cathartic activity from a distinctly negative situation.

MODEL RAILWAY LAYOUT, DESIGN AND CONSTRUCTION TECHNIQUES Nigel Burkin, 2012-08-01 Layout building is perhaps the most exciting, rewarding and challenging aspect of creating a model railway. Making the right design decisions and choosing good construction techniques are vital to ensure success. This book takes you through basic baseboard construction, shelf layout themes and how to link multi-deck designs together, enabling you to make the most of a given space. With different concepts covered, from simple portable layouts to helix construction techniques, Nigel Burkin mixes the best of British layouts with those used routinely overseas and shows you how you too can achieve success and satisfaction in executing your layout design. Topics covered included: Designing for comfort; How to use space efficiently; Practical construction techniques from L-Girder to box frame baseboards; Sub track bed construction, track laying and wiring; Fine tuning the layout for smooth operations.

Shelf Layouts for Model Railroads Iain Rice, 2009 Includes specific pointers on shelf layouts. Uses examples for N scale, HO scale, and ON30 scale trains. Covers a variety of scales, modeling eras, and room applications.

Computers in Railways XI John J. Allan, E. Arias, 2008 This volume features the proceedings of the Eleventh International Conference on Computer System Design and Operation in the Railway and other Transit Systems. It provides the latest information on the use of computer-based techniques, and promotes a general awareness of these throughout the business management, design, manufacture and operation of railways and other advanced passenger, freight and transit systems. Of interest to railway managers, consultants, railway engineers (including signal and control engineers), designers of advanced train systems and computer specialists, the proceedings will also be of interest to planners of railway network systems, manufacturers of the track, rolling stock, locomotives and other ancillary equipment and systems; who all have a common interest in the development and application of computer techniques for the solution of problems in the railway and other mass transit systems. Papers included in this volume cover the following topics: Planning; Safety and security; Passenger interface systems; Decision support systems, Computer techniques; Driverless operations; Advanced train control; Train location; Dynamic train regulations; Timetable planning; Operations quality; Communications, Energy management; Power supply; Dynamics and wheel/rail interface; Freight; Condition monitoring; Asset management; Maglev and high speed railway.

Towards concurrent planning of railway maintenance and train services Tomas

Lidén,2016-09-05 Efficiency in the public and freight transportation systems is of crucial importance for a society. Railways can offer high capacity and relatively low environmental impact, but require that several technical systems are tuned and operate well. Specifically there is a very tight interdependency between infrastructure and trains, which distinguishes railways from other transportation modes. Thus maintenance of all the subsystems is needed. Railways do also have some specific and complicating properties that influence maintenance and operations: Most activities need exclusive access to the infrastructure and - due to the geographic layout, safety requirements and partitioning of the subsystems - large portions of the network will be affected by each activity. Furthermore, several organisational units and resources are involved, ranging from governments and regulatory bodies, over operators and contractors to suppliers, technical experts and work forces. Thus railway maintenance is complicated to organize and consumes large budgets. This thesis treats the planning and scheduling problems that concern railway infrastructure maintenance and the coordination with train traffic. Mathematical methods and optimization are studied and used, with the aim of advancing the knowledge about models for solving such problems. The thesis contains three papers and presents: (1) A survey regarding railway maintenance activities, the major planning problems and the conducted research so far; (2) A model for quantitative comparison and assessment of competing capacity requests from train operations and maintenance; (3) An optimization model for integrated scheduling of both maintenance windows and train services. The work can be helpful for practitioners as well as researchers who want to take further steps in this interesting and challenging area. Based on the results that have been obtained, future research directions are presented that may lead towards practical use of concurrent planning of railway maintenance and train services.

Intelligent Mobile Projects with TensorFlow Jeff Tang,2018-05-22 Create Deep Learning and Reinforcement Learning apps for multiple platforms with TensorFlow Key Features Build TensorFlow-powered AI applications for mobile and embedded devices Learn modern AI topics such as computer vision, NLP, and deep reinforcement learning Get practical insights and exclusive working code not available in the TensorFlow documentation Book Description As a developer, you always need to keep an eye out and be ready for what will be trending soon, while also focusing on what's trending currently. So, what's better than learning about the integration of the best of both worlds, the present and the future? Artificial Intelligence (AI) is widely regarded as the next big thing after mobile, and Google's TensorFlow is the leading open source machine learning framework, the hottest branch of AI. This book covers more than 10 complete iOS, Android, and Raspberry Pi apps powered by TensorFlow and built from scratch, running all kinds of cool TensorFlow models offline on-device: from computer vision, speech and language

processing to generative adversarial networks and AlphaZero-like deep reinforcement learning. You'll learn how to use or retrain existing TensorFlow models, build your own models, and develop intelligent mobile apps running those TensorFlow models. You'll learn how to quickly build such apps with step-by-step tutorials and how to avoid many pitfalls in the process with lots of hard-earned troubleshooting tips. What you will learn Classify images with transfer learning Detect objects and their locations Transform pictures with amazing art styles Understand simple speech commands Describe images in natural language Recognize drawing with Convolutional Neural Network and Long Short-Term Memory Predict stock price with Recurrent Neural Network in TensorFlow and Keras Generate and enhance images with generative adversarial networks Build AlphaZero-like mobile game app in TensorFlow and Keras Use TensorFlow Lite and Core ML on mobile Develop TensorFlow apps on Raspberry Pi that can move, see, listen, speak, and learn Who this book is for If you're an iOS/Android developer interested in building and retraining others' TensorFlow models and running them in your mobile apps, or if you're a TensorFlow developer and want to run your new and amazing TensorFlow models on mobile devices, this book is for you. You'll also benefit from this book if you're interested in TensorFlow Lite, Core ML, or TensorFlow on Raspberry Pi.

Artificial Intelligence Systems and the Internet of Things in the Digital Era Abdalmuttaleb M.A Musleh Al-Sartawi, Anjum Razzaque, Muhammad Mustafa Kamal, 2021-05-28 This book brings together intelligence systems and the Internet of Things, with special attention given to the opportunities, challenges, for education, business growth, and economic progression of nations which will help societies (economists, financial managers, engineers, ICT specialists, digital managers, data managers, policymakers, regulators, researchers, academics, and students) to better understand, use, and control AI and IoT to develop future strategies and to achieve sustainability goals. EAMMIS 2021 was organized by the Bridges Foundation in cooperation with the Istanbul Medeniyet University, Istanbul, Turkey, on March 19-20, 2021. EAMMIS 2021 theme was Artificial Intelligence Systems and the Internet of Things in the digital era. The papers presented at the conference provide a holistic view of AI education, MIS, cybersecurity, blockchain, Internet of Ideas (IoI), and knowledge management.
