All Your Ruins Alex Gayhart, 2019-05 The world is gone. The Kaiju are here. All else that remains is ruin. James survived the end of his world. Gifted by chance and science with a unique endurance for the world of the Ruin he wanders the apocalyptic landscape stalking the monstrous kaiju, ZARIUS. Allison and her sister Jenna travel toward Haven, a prayer as much as a place that might provide safety and shelter to the recently orphaned siblings. Ronald Hicks strives to make his mark on the world in a way he never could before the Kaiju came. The monsters which crawled out of myth and legend have blighted the land with their poisonous blood and its mutagenic properties. Now the last vestiges of humanity huddle together and desperately cling to what remains of their ruined world. Can a legacy in the making outrun death? Can two orphaned siblings survive? Can a man ever hope to kill a god?

How to Make Adorable Baby Animal Dolls Jonni Good, 2013-06 In this book the author shows you exactly how to make your own adorable baby animal collector's dolls, leading you through the entire process every step of the way. Your dolls won't cost much to make, and every doll will be an original, one-of-a-kind work of art. Since no two dolls ever come out exactly alike,

each doll will have it's own personality and character. You won't have to learn how to make molds for the doll heads, because each one is hand-sculpted over a simple armature. You don't need a kiln, because you'll be using home-made air-dry clay instead of porcelain. The resulting heads are seamless, hollow, and surprisingly strong. The bodies and ears are made out of soft, huggable cotton velour, and the toes are sculpted with a few easy stitches. Adorable!

The Alphabet and the Algorithm Mario Carpo, 2011-02-04 The rise and fall of identical copies: digital technologies and form-making from mass customization to mass collaboration. Digital technologies have changed architecture—the way it is taught, practiced, managed, and regulated. But if the digital has created a “paradigm shift” for architecture, which paradigm is shifting? In *The Alphabet and the Algorithm*, Mario Carpo points to one key practice of modernity: the making of identical copies. Carpo highlights two examples of identity crucial to the shaping of architectural modernity: in the fifteenth century, Leon Battista Alberti's invention of architectural design, according to which a building is an identical copy of the architect's

design; and, in the nineteenth and twentieth centuries, the mass production of identical copies from mechanical master models, matrixes, imprints, or molds. The modern power of the identical, Carpo argues, came to an end with the rise of digital technologies. Everything digital is variable. In architecture, this means the end of notational limitations, of mechanical standardization, and of the Albertian, authorial way of building by design. Charting the rise and fall of the paradigm of identity, Carpo compares new forms of postindustrial digital craftsmanship to hand-making and the cultures and technologies of variations that existed before the coming of machine-made, identical copies. Carpo reviews the unfolding of digitally based design and construction from the early 1990s to the present, and suggests a new agenda for architecture in an age of variable objects and of generic and participatory authorship.

Architecture in the Age of Printing Mario Carpo,2017-02-10 A history of the influence of communication technologies on Western architectural theory. The discipline of architecture depends on the transmission in space and time of accumulated experiences, concepts, rules, and models. From the invention of the alphabet to the development of ASCII code for electronic communication, the process of recording and transmitting this body of knowledge has reflected the dominant information technologies of each period. In this book Mario Carpo discusses the communications media used by Western architects, from classical antiquity to modern classicism, showing how each medium related to specific forms of architectural thinking. Carpo highlights the significance of the invention of movable type and mechanically reproduced

images. He argues that Renaissance architectural theory, particularly the system of the five architectural orders, was consciously developed in response to the formats and potential of the new printed media. Carpo contrasts architecture in the age of printing with what preceded it: Vitruvian theory and the manuscript format, oral transmission in the Middle Ages, and the fifteenth-century transition from script to print. He also suggests that the basic principles of typographic architecture thrived in the Western world as long as print remained our main information technology. The shift from printed to digital representations, he points out, will again alter the course of architecture.

The Batman Handbook Scott Beatty, 2005 Based in the world of the Dark Knight but with real-world expert advice, The Batman Handbook teaches all of the skills of the world's most mysterious superhero. Covering such essentials as throwing a batarang, constructing a Kevlar suit and withstanding poisoning, this ultimate guide is produced in partnership with DC Comics and features all original artwork from David Hahn, a DC comics illustrator. Batman comics ranked top in comic book sales for seven out of 12 months last year. The book will be published in time for the June 2005 release of Batman Begins, a movie focusing on how a young Bruce Wayne obtained the skills and abilities necessary to become Batman. With real-world advice about fantastical skills, The Batman Handbook will appeal to all superhero wannabes.

Man and His Environment M. F. Mohtadi, 2013-10-22 Man and His Environment,

Volume 2 covers the proceedings of the Second International Banff Conference of Man and His Environment, held in Banff Springs Hotel, Alberta, Canada on May 19-22, 1974. The conference addresses the broad environmental issues in relation to man and his natural environment. This book is organized into six sessions encompassing 17 chapters. The first session deals with the continuing development of the Canadian mineral resources and the role of the National Energy Board in the country's energy management. This session also provides an overview of the world hydrocarbon energy resources. The second session discusses various problems in overpopulated and industrially and technologically underdeveloped countries and developments in the environmental restraints on production practices to protect the environment. The subsequent two sessions look into the effects of human activities on his environment. Topics covered in these sessions include the use and misuse of technology; social, economic, and political impact of urbanization; and government environmental policies. The concluding sessions outline the ethical structure of Western Society and the development of a theoretical model of public morality. These topics are followed by discussions on the essential nature of the environmental problems and the systematic relations between the Western culture and Western environment.

Scarecrow's Panic Plot Scott Beatty,2015 After he falls into Scarecrow's trap, Batman is fitted with a helmet that slowly releases a fear-inducing

gas, leaving him terrified of everything around him--even Robin and Nightwing, who are trying to save him.

Discrete Gilles Retsin, 2019-04-29 After two decades of experimentation with the digital, the prevalent paradigm of formal continuity is being revised and questioned by an emerging generation of architects and theorists. While the world struggles with a global housing crisis and the impact of accelerated automation on labour, digital designers' narrow focus on mere style and continuous differentiation seems increasingly out of touch. This issue charts an emerging body of work that is based on a computational understanding of the discrete part or building block – elements that are as scalable, accessible and versatile as digital data. The discrete proposes that a new, digital understanding of assembly, based on parts, contains the greatest promise for a complex, open-ended, adaptable architecture. This approach capitalises on the digital economy and automation, with the potential of the digital to democratise production and increase access. The digital not only has deep implications for how we design and produce architecture; it is first and foremost a new system of production with economic, social and political consequences that need to be taken into account. This issue presents a diverse body of work focused on the notion of the discrete: from design experiments and aesthetics, to urban models, tectonics, distributed robots, new material organisations and post-capitalist scenarios engaging with automation.
