**The Dragon and the Dazzle** Marco Pellitteri,Jean-Marie Bouissou,Gianluca Di Fratta,Cristiano Martorella,Bounthavy Suvilay,2010 In the worldwide circulation of the products of cultural industries, an important role is played by Japanese popular culture in European contexts. Marco Pellitteri shows that the contact between Japanese pop culture and European youth publics occurred during two phases. By use of metaphor, the author calls them the Dragon and the Dazzle. The first took place between 1975 and 1995, the second from 1996 to today. They can be distinguished by the modalities of circulation and consumption/re-elaboration of Japanese themes and products in the most receptive countries: Italy, France, Spain, Germany and, across the ocean, the United States. During these two phases, several themes have been perceived, in Europe, as rising from Japan's social and mediatic systems. Among them, this book examines the most apparent from a European point of view: the author names them machine, infant, and mutation, visible mostly through manga, anime, videogames, and toys. Together with France, Italy is the European country that in this respect has had the most central role. There, Japanese imagination has been acknowledged not only by young people, but also by politicians, television programmers, the general public, educators, comics and cartoons authors. The growing influence of Japanese pop culture, connected to the appreciation of its manga, anime, toys, and videogames, also urges political and mediologic questions linked to the identity/ies of Japan as they are understood--wrongly or rightly--in Europe and the West, and to the increasingly important role of Japan in international relations.--Back cover

This variety provides a creative and fascinating edge for both specialist and nonspecialist readers. Contributors' works share a common relevance, interest, and involvement despite their regional considerations and the different modes of analysis demonstrated. *Japanese Robot Culture* Yuji Sone, 2016-12-17 Japanese Robot Culture examines social robots in Japan, those in public, domestic, and artistic contexts. Unlike other studies, this book sees the robot in relation to Japanese popular culture, and argues that the Japanese 'affinity' for robots is the outcome of a complex loop of representation and social expectation in the context of Japan's continuing struggle with modernity. Considering Japanese robot culture from the critical perspectives afforded by theatre and performance studies, this book is concerned with representations of robots and their inclusion in social and cultural contexts, which science and engineering studies do not address. The robot as a performing object generates meaning in staged events and situations that make sense for its Japanese observers and participants. This book examines how specific modes of encounter with robots in carefully constructed mises en scène can trigger reflexive, culturally specific, and often ideologically-inflected responses.

Between Technology and Humanity Chris Gastmans,2002 In the last decade health care has witnessed a host of technological novelties in the field of diagnostic and therapeutic practices, as well as in the supportive information and communication technology and in various applications of genetics, microbiology and informatics. As a result a few questions need to be answered: -Is health care ethics due dor a splitting up into an ethics of technology (focusing on the ethical implications of new technologies) and an ethics of care (focusing on the ethical problems concerning chronic diseases, decay, disability, end of life)? -How to cope with dependence, limitation, finiteness, suffering, ... in spite of technological progress? -Could a better integration of technology and care preclude situations where patients are being dehumanised? Starting with a philosophical ethical reflection about the possibilities and dangers of technologies in health care, this book highlights both the relation between technology and care, and the normative aspects of economic analyses in health care. Finally, a series of concrete examples from various clinical fields (prenatal diagnosis, genetic tests, digital imaging in psychiatry, tube feeding in care for the elderly, and palliative sedation) will help the authors to consider how to integrate these technologies in a care context aimed upon humaneness. Since each topic is analysed by leading European clinicians and health care ethicists, this book clearly stands for the interdisciplinary approach in health care ethics This book may be a rich source of material for reflection on the role, meaning and ends of technology and care, as harmonious aspects of clinical health care practice. However, the authors main concern is to show what such a reflection may consist of and how it can contribute to the inquiry into the experience of technology, the needs of humanity and the development of appropriate health care.
