Douglas F-4 Phantom II is a tandem two-seat, twin-engined, all-weather, long-range supersonic jet interceptor fighter/fighter-bomber. Part one of this title provides detailed photographic coverage of the USAF F4C, F-4D, RF-4C, F-4E, F-4G, QF-4E/G and Thunderbird variants.

McDonnell Douglas F-4 Phantom Geoff Coughlin,2022-06-20

The McDonnell Douglas F-4 Phantom II was the most-produced American supersonic military jet with 5,195 aircraft being produced. By any standards the F-4 has been incredibly successful, used not only by the USAF and US Navy but many air forces around the world including Germany, Israel, Turkey and Japan. The F-4 was designed as a long-range fighter interceptor and fighter bomber, excellent in all roles assigned to it. The Phantom has performed

leading roles in multiple conflicts around the world from the Vietnam War through to the Gulf War. Although the F-4 left US service in 1996 it has continued in service with other air forces, only just being retired in 2020 from the Japanese Air Self-Defence Force. This new title in Pen & Sword's highly successful Flight Craft series covers the development and operational use of the F-4 Phantom II and brings to life the variety of color schemes and markings applied by many of the multiple air arms that have operated the Phantom around the world by including quality color profiles. Multiple model projects are included covering significant variants of the F-4 like the F-4B, F-4D, F-4E, F-4F, F-4G, F-4J, F-4EJ-Kai; British FGR-2 and F-4J(UK). All the popular model scales are represented: 1:72, 1:48 and 1:32A first for scale modellers everywhere – a book aimed at scale modellers of all levels interested in building the F-4 Phantom II.

McDonnell Douglas F-4 Phantom II William R. Peake, 2004 A legend in its own time, over five thousand Phantoms were built in St Louis and Japan over more than twenty years. This heavily tabular book gives the construction number and first flight date of each aircraft and the attrition or retirement date and disposition of those no longer in service. USAF, USN and USMC aircraft which

have scored combat victories are also detailed.

Modelling the F-4 Phantom II Geoff Coughlin, Neil

Ashby, 2012-05-20 The 'Phabulous' Phantom first took to the air on 27 May 1958 and has been in service around the world for many decades. The United States, the United Kingdom, Australia, Egypt, Germany, Greece, Iran, Israel, Japan, South Korea, Spain and Turkey have all operated this powerful aircraft. The Phantom starred in both the Vietnam War and Operation Desert Storm, and in its service career has flown every traditional military mission. With many F-4 variants in service (from FG.1s to 'Wild Weasels'), and some 25 scale model kits currently available, the possibilities for modelling this subject are endless. There are few guides currently available to the F-4 modeller: this book seeks to redress the imbalance, providing an in-depth and step-by-step approach to modelling this plane across a variety of scales, types, and national schemes.

Ian Black,2016-05-15 First entering service in 1960 with the US military, the F-4 Phantom remained at the forefront of US air power throughout the 1970s and 1980s. It saw extensive action during the Vietnam War as the principal air superiority fighter for both the US Navy and Air Force, as well as in the ground-attack and reconnaissance roles. The F-4J, K and M also played key roles with the RAF and Royal Navy in the same period. Former RAF Phantom navigator Ian Black gives the F-4 the Haynes Manual treatment.

Sierra Hotel : flying Air Force fighters in the decade after Vietnam , 2001 In February 1999, only a few weeks before the U.S. Air Force spearheaded NATO's Allied Force air campaign against Serbia, Col. C.R. Anderegg, USAF (Ret.), visited the commander of the U.S. Air Forces in Europe. Colonel Anderegg had known Gen. John Jumper since they had served together as jet forward air controllers in Southeast Asia nearly thirty years earlier. From the vantage point of 1999, they looked back to the day in February 1970, when they first controlled a laser-guided bomb strike. In this book Anderegg takes us from glimmers of hope like that one through other major improvements in the Air Force that came between the Vietnam War and the Gulf War. Always central in Anderegg's account of those changes are the people who made them. This is a very personal book by an officer who participated in the transformation he describes so vividly. Much of his story revolves around the Fighter Weapons School at Nellis Air Force Base (AFB), Nevada, where he served two tours as an instructor

pilot specializing in guided munitions.

The Smell of Kerosene National Aeronautics and Space Administration, Donald L. Mallick, Peter W. Merlin, 2023-12-28 This book puts the reader in the pilot's seat for a day at the office unlike any other. **The Smell of Kerosene** tells the dramatic story of a NASA research pilot who logged over 11,000 flight hours in more than 125 types of aircraft. Donald Mallick gives the reader fascinating first-hand description of his early naval flight training, carrier operations, and his research flying career with NASA. After transferring to the NASA Flight Research Center, Mallick became involved with projects that further pushed the boundaries of aerospace technology. These included the giant delta-winged XB-70 supersonic airplane, the wingless M2-F1 lifting body vehicle, and triple-sonic YF-12 Blackbird. Mallick also test flew the Lunar Landing Research Vehicle and helped develop techniques used in training astronauts to land on the Moon.

Flying beyond the stall Douglas A. Joyce, 2014 The X-31 Enhanced Fighter Maneuverability Demonstrator was unique among experimental aircraft. A joint effort of the United States and Germany, the X-31 was the only X-plane to be designed, manufactured, and flight tested as an international collaboration. It

was also the only X-plane to support two separate test programs conducted years apart, one administered largely by NASA and the other by the U.S. Navy, as well as the first X-plane ever to perform at the Paris Air Show. Flying Beyond the Stall begins by describing the government agencies and private-sector industries involved in the X-31 program, the genesis of the supermaneuverability concept and its initial design breakthroughs, design and fabrication of two test airframes, preparation for the X-31's first flight, and the first flights of Ship #1 and Ship #2. Subsequent chapters discuss envelope expansion, handling qualities (especially at high angles of attack), and flight with vectored thrust. The book then turns to the program's move to NASA's Dryden Flight Research Center and actual flight test data. Additional tasking, such as helmet-mounted display evaluations, handling quality studies, aerodynamic parameter estimation, and a tailless study are also discussed. The book describes how, in the aftermath of a disastrous accident with Ship #1 in 1995, Ship #2 was prepared for its outstanding participation in the Paris Air Show. The aircraft was then shipped back to Edwards AFB and put into storage until the late 1990s, when it was refurbished for participation in the U. S. Navy's VECTOR program. The book ends with a comprehensive

discussion of lessons learned and includes an Appendix containing detailed information.
