*Renaissance Fun* Philip Steadman, 2021-04-13 Renaissance Fun is about the technology of Renaissance entertainments in stage machinery and theatrical special effects; in gardens and fountains; and in the automata and self-playing musical instruments that were installed in garden grottoes. How did the machines behind these shows work? How exactly were chariots filled with singers let down onto the stage? How were flaming dragons made to fly across the sky? How were seas created on stage? How did mechanical birds imitate real birdsong? What was 'artificial music', three centuries before Edison and the phonograph? How could pipe organs be driven and made to play themselves by waterpower alone? And who were the architects, engineers, and craftsmen who created these wonders? All these questions are answered. At the end of the book we visit the lost 'garden of marvels' at Pratolino with its many grottoes, automata and water jokes; and we attend the performance of Mercury and Mars in Parma in 1628, with its spectacular stage effects and its music by Claudio Monteverdi – one of the places where opera was born. Renaissance Fun is offered as an entertainment in itself. But behind the show is a more serious scholarly argument, centred on the enormous influence of two ancient writers on these subjects, Vitruvius and Hero. Vitruvius's Ten Books on Architecture were widely studied by Renaissance theatre designers. Hero of Alexandria wrote the Pneumatics, a collection of designs for surprising and entertaining devices that were the models for sixteenth and seventeenth century automata. A second book by Hero On Automata-Making – much less well known, then and now – describes two miniature theatres that presented plays without human intervention. One of these, it is argued, provided the model for the type of proscenium theatre introduced from the mid-sixteenth century, the generic design which is still built today. As the influence of Vitruvius waned, the influence of Hero grew.

**Minds Make Societies** Pascal Boyer, 2018-05-08 A scientist integrates evolutionary biology, genetics, psychology, economics, and more to explore the development and workings of human societies. "There is no good reason why human societies should not be described and explained with the same precision and success as the rest of nature." Thus argues evolutionary psychologist Pascal Boyer in this uniquely innovative book. Integrating recent insights from evolutionary biology, genetics, psychology, economics, and other fields, Boyer offers precise models of why humans engage in social behaviors such as forming families, tribes, and nations, or creating gender roles. In fascinating, thought-provoking passages, he explores questions such as: Why is there conflict between groups? Why do people believe low-value information such as rumors? Why are there religions? What is social justice? What explains morality? Boyer provides a new picture of cultural transmission that draws on the pragmatics of human communication, the constructive nature of memory in human brains, and human motivation for group formation and cooperation. "Cool and captivating...It will change forever your understanding of society and culture."—Dan Sperber, co-author of *The Enigma of Reason* "It is highly recommended...to researchers firmly settled within one of the many single disciplines in question. Not only will they encounter a wealth of information from the humanities, the social sciences and the natural sciences, but the book will also serve as an invitation to look beyond the horizons of their own fields."—Eveline Seghers, *Evolutionary Studies in Imaginative Culture*

**Noninvasive Mechanical Ventilation** ANTONIO ESQUINAS, 2010-08-12 Noninvasive mechanical ventilation is an effective technique for the management of patients with acute or chronic respiratory failure. This comprehensive and up-to-date book explores all aspects of the subject. The opening sections are devoted to theory and equipment, with detailed attention to the use of full-face masks or helmets, the range of available ventilators, and patient-ventilator interactions. Clinical applications are then considered in depth in a series of chapters that address the use of noninvasive mechanical ventilation in chronic settings and in critical care, both within and outside of intensive care units. Due attention is also paid to weaning from conventional mechanical ventilation, potential complications, intraoperative applications, and staff training. The closing chapters examine uses of noninvasive mechanical ventilation in neonatal and pediatric care. This book, written by internationally recognized experts, will be an invaluable guide for both clinicians and researchers.

**Teaching Translation from Spanish to English** Allison Beeby Lonsdale, Allison Beeby, 1996 While many professional translators believe the ability to translate is a gift that one either has or does not have, Allison Beeby Lonsdale questions this view. In her innovative book, she demonstrates how teachers can guide their students by showing them how insights from communication theory, discourse analysis, pragmatics, and semiotics can illuminate the translation process. Using Spanish to English translation as her example, she presents the basic principles of translation through 29 teaching units, which are prefaced by objectives, tasks, and commentaries for the teacher, and through 48 task sheets, which show how to present the material to students.

*Global Guidelines for the Prevention of Surgical Site Infection* World Health Organization, 2017-01-27 Surgical site infections are caused by bacteria that get in through incisions made during surgery. They threaten the lives of millions of patients each year and contribute to the spread of antibiotic resistance. In low- and middle-income countries, 11% of patients who undergo surgery are infected in the process. In Africa, up to 20% of women who have a caesarean section contract a wound infection, compromising their own health and their ability to care for their babies. But surgical site infections are not just a problem for poor countries. In the United States, they contribute to patients spending more than 400 000 extra days in hospital at a cost of an additional US \$10 billion per year. No international evidence-based guidelines had previously been available before WHO launched its global guidelines on the prevention of surgical site infection on 3 November 2016, and there are inconsistencies in the interpretation of evidence and recommendations in existing national guidelines. These new WHO guidelines are valid for any country

and suitable to local adaptations, and take account of the strength of available scientific evidence, the cost and resource implications, and patient values and preferences.

Turbulent Jets and Plumes Joseph Hun-wei Lee,Vincent Chu,2012-12-06 Jets and plumes are shear flows produced by momentum and buoyancy forces. Examples include smokestack emissions, fires and volcano eruptions, deep sea vents, thermals, sewage discharges, thermal effluents from power stations, and ocean dumping of sludge. Knowledge of turbulent mixing by jets and plumes is important for environmental control, impact and risk assessment. Turbulent Jets and Plumes introduces the fundamental concepts and develops a Lagrangian approach to model these shear flows. This theme persists throughout the text, starting from simple cases and building towards the practically important case of a turbulent buoyant jet in a density-stratified crossflow. Basic ideas are illustrated by ample use of flow visualization using the laser-induced fluorescence technique. The text includes many illustrative worked examples, comparisons of model predictions with laboratory and field data, and classroom tested problems. An interactive PC-based virtual-reality modelling software (VISJET) is also provided. Engineering and science students, researchers and practitioners may use the book both as an introduction to the subject and as a reference in hydraulics and environmental fluid mechanics.

Understanding the Universe Manjunath.R,2020-03-17 A Scientific Introduction to Subatomic particles, Alien Intelligence, and Human Space Exploration (For the Cosmically Curious): There are many fundamental questions about the universe that have intrigued scientists, philosophers, and ordinary people for centuries. Here are a few of them: What is the universe made of? This is one of the most basic questions about the universe. Scientists have identified a number of different types of matter and energy, including atoms, subatomic particles, dark matter, and dark energy, but there is still much we don't know. How did the universe begin? The origin of the universe is a subject of intense study and debate. The prevailing theory is the Big Bang, which suggests that the universe began as a singularity and has been expanding ever since. What is the ultimate fate of the universe? Will it keep on expanding indefinitely or will it ultimately come to an end? Some theories suggest that the universe may end in a big rip or a big crunch, while others suggest that it will continue to expand indefinitely. What is the nature of space and time? These are fundamental concepts that are still not fully understood. Some theories suggest that space and time are intertwined and that they can be distorted by the presence of matter and energy. Are there other universes beyond our own? Some theories suggest that our universe may be just one of many in a multiverse. Although this theory is yet hypothetical, it is a fascinating concept that could have significant ramifications for our comprehension of the cosmos. These are just a few of the many fundamental questions about the universe that scientists and philosophers continue to explore. Understanding the Universe: Quarks, Leptons and the Big Bang is a comprehensive exploration of the fundamental principles that govern the universe we live in. From the tiniest particles to the grandest structures in the cosmos, this book takes readers on a journey of discovery through the mysteries of modern physics and cosmology. Starting with an introduction to the basic building blocks of matter, the book delves into the strange world of quarks and leptons, exploring their properties and interactions. It then examines the forces that govern the behavior of matter, including the strong and weak nuclear forces, electromagnetism, and gravity. The book also covers the history of the universe, from its origins in the Big Bang to the present day, and discusses the evolution of stars and galaxies. Readers will gain a deep understanding of the structure of the universe, its expansion, and the mysterious dark matter and dark energy that make up the vast majority of its mass. Filled with engaging examples, clear explanations, and fascinating insights, Understanding the Universe: Quarks, Leptons and the Big Bang is a must-read for anyone interested in the inner workings of the cosmos. Whether you're a student of physics, a science enthusiast, or simply curious about the universe, this book will provide you with a solid foundation for understanding the world around us.

Carl Sauer on Culture and Landscape William M. Denevan,Kent Mathewson,2009-05 Perhaps one of the most distinctive and studied geographers of the twentieth century, Carl O. Sauer (1889--1975) had influence that extends well beyond the confines of any one discipline. With a focus on historical and cultural geography, Sauer's essays have garnered praise from poets, natural historians, and social scientists alike who continue to explore Sauer's work. In Carl Sauer on Culture and Landscape, editors William M. Denevan and Kent Mathewson have compiled thirty-seven of Sauer's original works, including rare early writings, articles in now largely inaccessible publications, and transcriptions of key oral presentations that remain little known. A student of the relationships between land and life, people and places, Sauer helped establish landscape studies in cultural geography and paved the way for paradigmatic shifts in the scholarly assessment of Native American history. By strongly advocating a land ethic, a responsible stewardship of the sustaining earth, for his own and for future generations, Carl Sauer supplied an esthetic rationale and a historical perspective to the environmental movement. The volume opens with two extended essays on Sauer's critics and his works. Essays by prominent geographers and other authorities on Sauer introduce each section of the book, adding a contemporary element to the presentation and interpretation of Sauer's life and scholarship in areas such as soil conservation, man in nature, and cultivated plants. A complete bibliography of his publications and an extensive compilation of commentaries on his life and work make this an indispensable reference. Carl Sauer on Culture and Landscape sheds new light on Sauer's contributions to the history of geographic thought, sustainable land use, and the importance of biological and cultural diversity -- all of which remain key issues today.

**Islam and the West. Arabic inscriptions and pseudo inscriptions** Maria Vittoria Fontana,2020-02-28 This volume contains four essays on inscriptions and/or pseudo inscriptions made with letters of the Arabic alphabet or with characters deriving from the latter, used in artifacts produced in the West (and especially Italy) during the medieval and Renaissance period. Maria Vittoria Fontana is Full Professor of Islamic Archaeology and History of Art at the Department of Science of Antiquities of Sapienza University in Rome; previously, she held the same role at "L'Orientale" University of Naples. She has carried out excavations in Iran, Jordan and Yemen. The last excavation was at Istakhr and the final report was published in the volume Istakhr (Iran) 2011-2016: Historical and Archaeological Essays (Quaderni di Vicino Oriente XIII), Rome: Sapienza 2018. She is also the author of numerous scientific articles and monographs on both archaeological and iconographic subjects, the latter concerning Islamic productions as well as Western ones that have come into contact with Islam.

**Cultural Organizations, Networks and Mediators in Contemporary Ibero-America** Diana Roig-Sanz,Jaume Subirana,2020-01-03 This book proposes an innovative conceptual framework to explore cultural organizations at a multilateral level and cultural mediators as key figures in cultural and institutionalization processes. Specifically, it analyzes the role of Ibero-American mediators in the institutionalization of Hispanic and Lusophone cultures in the first half of the 20th century by means of two institutional networks: PEN (the non-governmental writer's association) and the International Institute of Intellectual Cooperation (predecessor to UNESCO). Attempting to combine cultural and global history, sociology, and literary studies, the book uses an analytical focus on intercultural networks and cultural transfer to investigate the multiple activities and roles that these mediators and cultural organizations set in motion. Literature has traditionally studied major figures and important centers of cultural production, but other regions and localities also played a crucial role in the development of intellectual cooperation. This book reappraises the place of Ibero-America in international cultural relations and retrieves the lost history of key secondary actors. The book will appeal to scholars from international relations, global and cultural history, sociology, postcolonial Studies, world and comparative literature, and New Hispanisms. **Hope and Healing** Gauvin A. Bailey,Sheila Barker,2005 The bubonic plague ravaged early modern Europe from the mid-fourteenth to the early eighteenth centuries, striking so often and in so many localities that people constantly were on guard against the scourge. Hope and Healing explores the response of the visual arts to this omnipresent aura of death, decay, and tragedy in the early modern European experience, focusing on Italy between the sixteenth and eighteenth centuries. An esteemed group of contributors draws on a wide range of materials, including diaries, medical and devotional treatises, poetry, sermons, letters, and chapbooks to illuminate the various aesthetic, social, and religious concerns that preoccupied artists, patrons, and the general populace. This vibrant and fascinating volume ultimately offers a fresh and intriguing perspective on the forces and concerns that shaped early modern Italian art.

**Domesticated: Evolution in a Man-Made World** Richard C. Francis,2015-05-25 "An essential read for anyone interested in the stories of the animals in our home or on our plate."—BBC Focus Without our domesticated plants and animals, human civilization as we know it would not exist. We would still be living at subsistence level as hunter-gatherers if not for domestication. It is no accident that the cradle of civilization—the Middle East—is where sheep, goats, pigs, cattle, and cats commenced their fatefully intimate association with humans. Before the agricultural revolution, there were perhaps 10 million humans on earth. Now there are more than 7 billion of us. Our domesticated species have also thrived, in stark contrast to their wild ancestors. In a human-constructed environment—or man-made world—it pays to be domesticated. Domestication is an evolutionary process first and foremost. What most distinguishes domesticated animals from their wild ancestors are genetic alterations resulting in tameness, the capacity to tolerate close human proximity. But selection for tameness often results in a host of seemingly unrelated by-products, including floppy ears, skeletal alterations, reduced aggression, increased sociality, and reduced brain size. It's a package deal known as the domestication syndrome. Elements of the domestication syndrome can be found in every domesticated species—not only cats, dogs, pigs, sheep, cattle, and horses but also more recent human creations, such as domesticated camels, reindeer, and laboratory rats. That domestication results in this suite of changes in such a wide variety of mammals is a fascinating evolutionary story, one that sheds much light on the evolutionary process in general. We humans, too, show signs of the domestication syndrome, which some believe was key to our evolutionary success. By this view, human evolution parallels the evolution of dogs from wolves, in particular. A natural storyteller, Richard C. Francis weaves history, archaeology, and anthropology to create a fascinating narrative while seamlessly integrating the most cutting-edge ideas in twenty-first-century biology, from genomics to evo-devo.

**Rhapsodic Objects** Yaelle Biro,Noemie Etienne,2021-12-20 Zirkulation und Nachahmung haben einen wesentlichen Einfluss auf die Gestaltung der materiellen Welt. Die Beiträge des Bandes untersuchen, wie technisches Wissen, immaterielle Wünsche und politische Agenden die Produktion und Rezeption der visuellen und materiellen Kultur im Wandel der Zeit und Orte prägten. Sie gehen den Wanderungen von Kulturgütern unter besonderer Berücksichtigung ihrer Entstehungskontexte nach. Mit dem Begriff des „rhapsodischen Objektes werden dabei die vielschichtigen, nicht immer in einem Zusammenhang stehenden Erzählungen der Objekte angesprochen.
