War in the Iberian Peninsula, 700–1600 Francisco García Fitz, João Gouveia Monteiro, 2018-04-30 War in the Iberian Peninsula, 700–1600 is a panoramic synthesis of the Iberian Peninsula including the kingdoms of Leon and Castile, Aragon, Portugal, Navarra, al-Andalus and Granada. It offers an extensive chronology, covering the entire medieval period and extending through to the sixteenth century, allowing for a very broad perspective of Iberian history which displays the fixed and variable aspects of war over time. The book is divided kingdom by kingdom to provide students and academics with a better understanding of the military interconnections across medieval and early modern Iberia. The continuities and transformations within Iberian military history are showcased in the majority of chapters through markers to different periods and phases, particularly between the Early and High Middle Ages, and the Late Middle Ages. With a global outlook, coverage of all the most representative military campaigns, sieges and battles between 700 and 1600, and a wide selection of maps and images, War in the Iberian Peninsula is ideal for students and academics of military and Iberian history.

Introduction to Plasma Physics and Controlled Fusion Francis F.

Chen, 2013-03-09 TO THE SECOND EDITION In the nine years since this book was first written, rapid progress has been made scientifically in nuclear fusion, space physics, and nonlinear plasma theory. At the same time, the energy shortage on the one hand and the exploration of Jupiter and Saturn on the other have increased the national awareness of the important applications of plasma physics to energy production and to the understanding of our space environment. In magnetic confinement fusion, this period has seen the attainment 13 of a Lawson number nTE of 2×10^{21} cm⁻³ sec in the Alcator tokamaks at MIT; neutral-beam heating of the PL T tokamak at Princeton to $KTi = 6.5$ keV; increase of average β to 3%-5% in tokamaks at Oak Ridge and General Atomic; and the stabilization of mirror-confined plasmas at Livermore, together with injection of ion current to near field-reversal conditions in the 2XII-B device. Invention of the tandem mirror has given magnetic confinement a new and exciting dimension. New ideas have emerged, such as the compact torus, surface-field devices, and the EBT mirror-torus hybrid, and some old ideas, such as the stellarator and the reversed-field pinch, have been revived. Radiofrequency heating has become a new star with its promise of dc current drive. Perhaps most importantly, great progress has been made in the understanding of the MHD behavior of toroidal plasmas: tearing modes, magnetic Vll Vlll islands, and disruptions.
