The Hydrogen Society Arno A. Evers,2010 Erhaps even more attractive is the idea to use the sun's heat for splitting water into hydrogen and oxygen and storing them in two separate vessels. The high temperature produced by recombining oxygen and hydrogen is known to be the most intense heat available to mankind. Moreover, one could use the hydrogen for lighting, and inexpensively produced oxygen would also close a longstanding gap. But how can one use the sun's energy to split water? In my opinion, thermopiles, which have already accomplished excellent performance, could solve this problem ...--The Back Cover.

Social and Environmental Dimensions of Organizations and Supply Chains Marcus Brandenburg,Gerd J. Hahn,Tobias Rebs,2017-07-13 This book

focuses on environmental and social factors in international supply chains and industry networks. It explores whether socially-responsible and environmentally-conscious operations are complementary or conflictive to economic targets. The book elaborates on innovative approaches to manage the economic, ecological and social performance in supply networks from different perspectives. In addition, it links sustainability to operational processes and illustrates specific application contexts. Moreover, it covers the social dimension of sustainability. The rise of sustainability in management forces enterprises to revisit the concept of profitability that drives their operations. Social standards and ecological targets represent critical factors that challenge industry networks. The interplay of these goals requires new insights from scientific research and managerial practice. New approaches and systems are needed to minimize environmental and social harms and to promote sustainability.

New Generation of Electric Vehicles Johanna Adison,2016-10-01 There is an unprecedented surge of interest in and the desire of producing gaselectric hybrid (HEVs) and all-electric vehicles (EVs) by the governments and public in the industrialized countries. This surge of interest and desire is attributed to several factors relating to the life-threatening air pollution in many parts of the world, the high petroleum price, conflicts in oil producing Middle East regions and the alarming trend of global warming due to rapid increase of greenhouse gas emissions by all sources, including those from transportation. Full electric vehicles use no gasoline; they are powered by a high-voltage electric motor and battery pack. All the elements are now in place to tackle fairly complex static rigid body problems. Battery electric vehicles do not have an internal combustion engine and use no on-board gasoline. Instead, they use a highvoltage electric motor, which gets its power from a high-voltage battery pack. The primary benefit of BEVs is that they completely eliminate carbon dioxide (CO2) and other emissions directly from the vehicle.Therefore, it is vital to raise global ecological awareness and wider public education regarding ecology. Goal of this book is to bring closer to the readers new drive technologies that are intended to environment and nature protection. New Generation of Electric Vehicles presents modern technique achievements and technologies applied in the implementation of electric vehicles. Special attention was paid to energy efficiency of electrical vehicles. Also today's trends, mathematical models and computer design elements of future cars are presented.
