*Designing the T-34* Peter Samsonov,2019-12-27 When the German army launched Operation Barbarossa — the invasion of the Soviet Union — on June 22, 1941, it was expecting to face and easily defeat outdated and obsolete tanks and for the most part it did, but it also received a nasty shock when it came up against the T-34. With its powerful gun and sloped armour, the T-34 was more than a match for the best German tanks at that time and the Germans regarded it with awe. German Field Marshal von Kleist, who commanded the latter stages of Barbarossa, called it —the finest tank in the world—. Using original wartime documents author and historian Peter Samsonov, creator of the Tank Archives blog, explains how the Soviets came to develop what was arguably the war’s most revolutionary tank design.

*The Art of Harvey Kurtzman* Denis Kitchen,Paul Buhle,2012-07-25 The definitive anthology of the pioneering cartoonist and creator of Mad magazine, featuring 100s of classic and never-before-seen illustrations. It’s difficult to overstate Harvey Kurtzman’s influence on pop culture. He discovered Robert Crumb and gave Gloria Steinem her first job in publishing. Terry Gilliam also started at his side, where he met John Cleese, and the genesis of Monty Python was formed. And Art Spiegelman has stated on record that he owes his career to him. Harvey Kurtzman was an astonishingly talented and influential artist, writer, editor, and satirist. The creator of MAD and Playboy’s “Little Annie Fanny” was called, “One of the most important figures in postwar America” by the New York Times. Kurtzman’s groundbreaking “realistic” war comics of the early ’50s and various satirical publications (MAD, Trump, Humbug, and Help!) had an immense impact on popular culture, inspiring a generation of underground cartoonists and comedians. The Art of Harvey Kurtzman includes hundreds of never-before-seen illustrations, paintings, pencil sketches, newly discovered lost E.C. Comics layouts, color compositions,

illustrated correspondence, and vintage photos from the rich Kurtzman archives.

*Sherman Tanks of the Red Army* Peter Samsonov,2020-12-21 More than 4000 examples of the famous diesel-fueled M4A2 Sherman tank were sent to the Soviet Union during the Second World War under the Lead-Lease program. These American-built vehicles were operated by Red Army crews against the Germans during some of the bitterest fighting on the Eastern Front - yet despite serving with distinction and being well-liked by their crews, relatively little has been written about these vehicles until now. Tank expert Peter Samsonov looks at the origins of the M4A2 in Soviet service and the machines that were received from the US as well as providing a detailed assessment of how they fared in combat on the front line.

**Introducing Chaos** Iwona Abrams,Ziauddin Sardar,2014-06-05 If a butterfly flaps its wings in Brazil, does it cause a tornado in Texas? Chaos theory attempts to answer such baffling questions. The discovery of randomness in apparently predictable physical systems has evolved into a science that declares the universe to be far more unpredictable than we have ever imagined. Introducing Chaos explains how chaos makes its presence felt in events from the fluctuation of animal populations to the ups and downs of the stock market. It also examines the roots of chaos in modern maths and physics, and explores the relationship between chaos and complexity, the unifying theory which suggests that all complex systems evolve from a few simple rules. This is an accessible introduction to an astonishing and controversial theory.

**Framework for the World** David Rhind,1997-10-28 framework Framework for the World. The geographical framework for the world is so fundamental it affects the lives of everyone on earth. On top of this 'template' virtually all other kinds of information are collected and displayed, ranging from population and socio-economic statistics, through environmental data of all kinds to asset registers such as the location of underground pipes and cables. For many years, the framework comprised simple topographic paper maps. Increasingly it is formed by topographic digital databases, from which maps and other products can be 'spun off'. These maps and databases have been created by a branch of national government, the National Mapping Organizations. At present, however, there are large variations in the content, quality and currency of the mapping and many countries have not yet converted all their maps into digital format. The world of NMOs is in turmoil, beset by rapid changes in technology, higher expectations from users of information and radical changes in the ways in which governments operate. This book describes how different approaches are being taken in policy and practical terms in different countries to face these common challenges. It also describes how global - as compared to purely national - needs are emerging for GI and how this demand is being met. The mutation of some national mapping organisations into geographical information utilities and the growth of national geographical information systems are outlined. Framework for the World is developed in 21 chapters written by senior managers involved with the framework from many different countries and drawn from both civilian and military organizations, from the United Nations and from the users of geographical frameworks. For the World

SAT Wars Joseph A. Soares,2015-04-17 What can a college admissions officer safely predict about the future of a 17-year-old? Are the best and the brightest students the ones who can check off the most correct boxes on a multiple-choice exam? Or are there better ways of measuring ability and promise? In this penetrating and revealing look at high-stakes standardized admissions tests, Joseph Soares demonstrates the far-reaching and mostly negative impact of the tests on American life and calls for nothing less than a national policy change. SAT Wars presents a roadmap for rethinking college admissions that moves us past the statistically weak and socially divisive SAT/ACT. The author advocates for evaluation tools with a greater focus on what youth actually accomplish in high school as

a more reliable indicator of qualities that really matter in one's life and to one's ability to contribute to society. This up-to-date book features contributions by well-known experts, including a piece from Daniel Golden, who won a Pulitzer Prize for his reporting in the Wall Street Journal on admissions, and a chapter on alternative tests from Robert Sternberg, who is the worlds most-cited living authority on educational research. As we continue to debate the use and misuse of standardized testing, SAT Wars will be important reading for a wide audience, including college administrators and faculty, high school guidance counselors, education journalists, and parents.
