Introductory Grammar of Amharic Wolf Leslau, 2000 This book closes the gap for beginners who want to study the Amharic language and had difficulties in finding the right grammar for this purpose: The first grammar of Amharic, the national language of Ethiopia, was published by Hiob Ludolf in 1698. The Amharic grammar published by Praetorius in 1879 is based on Amharic religious texts and on scattered material, usually composed by missionaries. A milestone in the study of Amharic is Marcel Cohen's *Traite de langue amharique* (1936), but this grammar, too is not completely suited for beginners since the author's generalizations are at times aimed at linguists. The grammar that comes closest to the concept of a beginner's grammar is that of C.H. Dawkin (1960), yet this grammar is extremely short, does not give examples and does not introduce the student to the intricacies of the language. The new book gives all the grammatical forms and the sentences of the present grammar in Amharic script and in phonetic transcription. The illustrative examples have a free and a literal translation. This procedure should likewise prove to be useful for the Semitist as well as for the general linguist.

On the Shoulders of Giants National Research Council, Mathematical Sciences Education Board, 1990-01-01 What mathematics should be learned by today's young people as well as tomorrow's workforce? *On the Shoulders of Giants* is a vision of richness of mathematics expressed in essays on change, dimension,

quantity, shape, and uncertainty, each of which illustrate fundamental strands for school mathematics. These essays expand on the idea of mathematics as the language and science of patterns, allowing us to realize the importance of providing hands-on experience and the development of a curriculum that will enable students to apply their knowledge to diverse numerical problems.

Frontiers in Computational Fluid-Structure Interaction and Flow Simulation
Tayfun E. Tezduyar, 2018-10-26 Computational fluid-structure interaction and flow simulation are challenging research areas that bring solution and analysis to many classes of problems in science, engineering, and technology. Young investigators under the age of 40 are conducting much of the frontier research in these areas, some of which is highlighted in this book. The first author of each chapter took the lead role in carrying out the research presented. The topics covered include Computational aerodynamic and FSI analysis of wind turbines, Simulating free-surface FSI and fatigue-damage in wind-turbine structural systems, Aorta flow analysis and heart valve flow and structure analysis, Interaction of multiphase fluids and solid structures, Computational analysis of tire aerodynamics with actual geometry and road contact, and A general-purpose NURBS mesh generation method for complex geometries. This book will be a valuable resource for early-career

researchers and students – not only those interested in computational fluid-structure interaction and flow simulation, but also other fields of engineering and science, including fluid mechanics, solid mechanics and computational mathematics – as it will provide them with inspiration and guidance for conducting their own successful research. It will also be of interest to senior researchers looking to learn more about successful research led by those under 40 and possibly offer collaboration to these researchers.

From Cave Man to Cave Martian Manfred "Dutch" von Ehrenfried,2019-04-05 This book explores the practicality of using the existing subsurface geology on the Moon and Mars for protection against radiation, thermal extremes, micrometeorites and dust storms rather than building surface habitats at great expense at least for those first few missions. It encourages NASA to plan a precursor mission using this concept and employ a "Short Stay" Opposition Class mission to Mars as the first mission rather than the "Long Stay" concept requiring a mission that is too long, too dangerous and too costly for man's first missions to Mars. Included in these pages is a short history on the uses of caves by early humans over great periods of time. It then describes the ongoing efforts to research caves, pits, tunnels, lava tubes, skylights and the associated technologies that pertain to potential

lunar and Mars exploration and habitation. It describes evidence for existing caves and lava tubes on both the Moon and Mars. The work of noted scientists, technologists and roboticists are referenced and described. This ongoing work is more extensive than one would think and is directly applicable to longer term habitation and exploration of the Moon and Mars. Emphasis is also given to the operational aspects of working and living in lunar and Martian caves and lava tubes.

The Romance of Modern Astronomy Hector Macpherson, 1911

Eclipse 3 Jonathan Strahan, 2009-10-01 To observe an eclipse is to witness a rare and unusual event. Under darkened skies the sun becomes a negative image of itself, its corona transforming the landscape into a strange space where anything might happen, and any story may be true... In the spirit of classic science fiction anthologies such as *Universe*, *Orbit*, and *Starlight*, master anthologist Jonathan Strahan (*The Best Science Fiction and Fantasy of the Year*) presents the non-themed genre anthology *Eclipse: New Science Fiction and Fantasy*. Here you will find stories where strange and wonderful things happen--where reality is eclipsed by something magical and new. Continuing in

the footsteps of the multiple-award-nominated anthologies Eclipse One and Eclipse Two, Eclipse Three delivers new fiction by some of the genre's most celebrated authors, including Karen Joy Fowler's story of a family's desperation and a rebellious young woman's strange incarceration; Ellen Klages's fable of a practical girl, an unusual tortoise, and an ancient mathematical puzzle; Pat Cadigan's story of a mysterious photograph and two friends' journey through space and time in order to solve its riddle; Jeffrey Ford's tale of a legendary sword imbued with the power to turn flesh to coral, and of the artist that wields it; Daniel Abraham's story of divine providence, sacred oaths, and the omens that indicate whether a man is fit to be king; and Caitlin R. Kiernan's chronicle of an astronaut whose memories of a lover lost to an alien intelligence haunt her.

Hardware: The Definitive SF Works of Chris Foss Chris Foss, 2011-09-06 Foss's groundbreaking and distinctive science fiction art revolutionized paperback covers in the 1970s and 80s. Dramatically raising the bar for realism and invention, his trademark battle-weary spacecraft, dramatic alien landscapes and crumbling brutalist architecture irrevocably changed the aesthetic of science fiction art and cinema. Featuring work for books by Isaac Asimov, E. E. 'Doc' Smith, Arthur C. Clarke, A. E. Van Vogt and Philip K. Dick, and film design for Ridley Scott and Stanley Kubrick, this volume brings together many rare and classic images that have never been seen or reprinted before. The first comprehensive retrospective of Chris Foss's SF career. "Chris Foss' name has become pre-eminent among sf artists... He is in love

with the monstrous, with angular momentum, with inertia-free projectiles and irresistible objects.” – Brian Aldiss “[Foss’] creations are real machines, not just an artist’s dreams. They combine the two elements so essential to science fiction: realism and a sense of wonder... A medieval goldsmith of future eons.” – Alejandro Jodorowsky
