*Mikoyan Gurevich MiG-15* Dariusz Karnas, 2014-03-06 1/48 and 1/32 scale plans of following aircraft: MiG-15 MiG-15bis UTI MiG-15 all Polish Variants

**Mikoyan-Gurevitch MIG 15 & 17** Gérard Paloque, 2014 At the beginning of the Korean War, the west discovered the MiG-15, the first mass-produced jet fighter built in the Soviet Union. This small device entered service at the end of 1950 in its improved version, the MiG-15bis, and in turn was quickly deployed to Korea where, with its powerful armament and handling, it was an unpleasant surprise for the forces of the United Nations, after finding their air superiority with the arrival of the latest version of the famous F-86 Sabre. While the bundle - a nickname given by NATO to the MiG-15 - was barely in use, MiG conceived its successor, the more efficient and wing modified MiG-17 (Fresco). The type was withdrawn from service in the USSR in the late sixties, however it had great success abroad. The Fresco was the most exported Soviet fighter until the arrival of its indirect successor, MiG-21 (see Planes & Pilots No. 12).

**The Mikoyan-Gurevich Mig-3 Vol. I** Dariusz Paduch, 2022-01-31 The MiG-3 fighter plane, like the history of the creation of the Mikoyan and Gurevich (Микоян и Гуревич) design bureau, is relatively well known to anyone interested in the history of Soviet aviation. Many books and articles have been published about this machine, but information about the circumstances of the birth of the project and the conditions of its creation are very brief and concise. MiG-1 and MiG-3 were the most numerous new generation fighters in Soviet aviation at the time of the German invasion of the USSR. They played a very important role in the first period of the war. Until now, it has been assumed in the literature that this applies mainly to the use of these aircraft during the battle of Moscow, as well as capital's and Leningrad's air defense, but MiGs also took on a large weight of air combat at the front in 1941.

**Famous Russian Aircraft** Yefim Gordon, Dmitrii Sergeevich Komissarov, 2011-01-04 When the Mikoyan Gurevich MiG-15 first appeared in combat against the Western powers during the Korean War it caused consternation amongst its opposition. Its performance far outstripped any jet fighter aircraft produced by the West at the time and its duels with the US F86 Sabre have entered into aviation legend. The success of the MiG-15 was such that it went on to become the most widely produced jet fighter aircraft in history, and although figures vary it is believed over 12,000 were built plus another 6,000 under licence. The prototype of the distinctive fighter, built by the Mikoyan design bureau, with its high swept wing and tailplane and nose intake first flew in 1947, and was first deployed in the Korean War at the start of the 1950s. Although it suffered from handling problems when involved in dogfights with the F86, and a number were shot down, it had been built primarily with the role of interceptor in mind and was highly effective against the US heavy bombers. The MiG-15 was produced in a number of variants, both in single seat and two-seat versions and remained in service as a trainer aircraft for Warsaw Pact countries into the 1970s. Its improved successors, the MiG-17 and MiG-19 became the standard Soviet jet fighters of the early Cold War, including the Vietnam War. The MiG-15 was also produced in Czechoslovakia, Poland and China and aircraft were exported throughout the world. Its rugged build has ensured that a number survive in flying condition today. This book is a worthy addition to the acclaimed 'Famous Russian Aircraft' series, with a comprehensive history of the aircraft's development, design history and use, throughout the world. The comprehensive text is supported by almost 1000 photographs and line drawings as well as over a 100 detailed colour profiles. This will be the definitive book on the market of this historic Soviet jet fighter.

**Visual Aircraft Recognition** U. S. Army, 2013-01-14 This manual is primarily a ready reference to assist the ground observer in aircraft recognition and identification. It provides information on current operational aircraft of the United States and foreign countries, which may be observed worldwide in the combat area. It can be used as source material for personnel conducting unit training in visual aircraft recognition. The procedures in this publication apply throughout the US Army. The data is based on the best information available at the time of publication; however, it is not all-inclusive because of some classification guidelines. This publication, by nature, has a built-in time lag, and some aircraft may still be under development or classified at the time of writing, but may be fielded or unclassified at, or after, publication.

**Sweeping Forward**, 2013 The X-29 was an unusual aircraft with a truly unique silhouette. It combined many features that challenged the technologies of its day and represented special problems for the developers and the team of testers responsible for documenting its features and design goals. This book is a look at the big picture of what this team accomplished in a relatively fast-paced test program involving the truly unique X-29.

**Red Eagles** Steve Davies, 2012-01-24 When two Navy F-14 Tomcats engaged and shot down two Sukhoi Su-22 jet fighters in 1981, they drew on experience and tactics that they had learned from a previous encounter with MiG jet fighters. The difference between the two encounters was that in the first, the enemy fighters were flown by American pilots assigned to a top secret squadron hidden at a remote airfield in the ultra-secret Tonopah Nuclear Test range, Nevada. In the second, the Sukhoi fighters were flown by Libyan pilots attempting to enforce Colonel Qaddafi's 'Line of Death' over the Gulf of Sidra. From the mid-1960s until the end of the Cold War, the United States Air Force acquired and flew Russian-made MiG jets, eventually creating a secret squadron dedicated to exposing American fighter pilots to enemy MiGs. Following underperformance in the Vietnam War, the USAF began to study MiGs in order to improve fighter pilot training. This then developed into the black Constant Peg program. In this program, MiGs were secretly acquired, and made airworthy, a difficult task without manuals or parts. A secret base was found to operate the planes from; and then ace pilots were found and trained to not only fly the assets, but fly them as they were flown by America's enemies. Finally, a program of exposing American fighter pilots to the MiGs was developed. In all, more than 1,600 American fighter pilots would train against America's secret MiGs between 1974 and 1989. Uncovering the story of the secret MiGs in America during the Cold War, and specifically Constant Peg and the 4477th Test & Evaluation Squadron, is a challenge because much of the information has been destroyed, or remains classified. To piece together the story of this group of men who provided America's fighter pilots with a level of training that was the stuff of dreams, author Steve Davies has interviewed over thirty of the Red Eagle pilots, along with other members of the squadron. This paperback edition includes new material on HAVE IDEA and other HAVE programs; making the MiGs airworthy in 1977 from the maintainers' perspective; and the intelligence activities of MiG expert at the Foreign Technology Division Mike Coyle. The result is a fascinating glimpse into a black program that enabled American fighter pilots to go into combat having already met and defeated their first MiG. Hardcover edition ISBN: 9781846033780

**The Chief Culprit** Viktor Suvorov, 2013-03-15 Bestselling author Victor Suvorov probes newly released Soviet documents and reevaluates existing material to analyze Stalin's strategic design to conquer Europe and the reasons behind his controversial support for Nazi Germany. A former Soviet army intelligence officer, the author explains that Stalin's strategy leading up to World War II grew from Vladimir Lenin's belief that if World War I did not ignite the worldwide Communist revolution, then a second world war would be needed to achieve it. Stalin saw Nazi Germany as the power that would fight and weaken capitalist countries so that Soviet armies could then sweep across Europe. Suvorov reveals how Stalin conspired with German leaders to bypass the Versailles Treaty, which forbade German rearmament, and secretly trained German engineers and officers and provided bases and factories for war. He also calls attention to the 1939 nonaggression pact between the Soviet Union and Germany that allowed Hitler to proceed with his plans to invade Poland, fomenting war in Europe. Suvorov debunks the theory that Stalin was duped by Hitler and that the Soviet Union was a victim of Nazi aggression. Instead, he makes the case that Stalin neither feared Hitler nor mistakenly trusted him. Suvorov maintains that after Germany occupied Poland, defeated France, and started to prepare for an invasion of Great Britain, Hitler's intelligence services detected the Soviet Union's preparations for a major war against Germany. This detection, he argues, led to Germany's preemptive war plan and the launch of an invasion of the USSR. Stalin emerges from the pages of this book as a diabolical genius consumed by visions of a worldwide Communist revolution at any cost—a leader who wooed Hitler and Germany in his own effort to conquer the world. In contradicting traditional theories about Soviet planning, the book is certain to provoke debate among historians throughout the world.

**Reverse Engineering** Wego Wang, 2010-09-16 The process of reverse engineering has proven infinitely useful for analyzing Original Equipment Manufacturer (OEM) components to duplicate or repair them, or simply improve on their design. **The English Electric Lightning** Martin W. Bowman, 2018-01-30 A photo-packed history of this Cold War-era supersonic fighter aircraft. The early 1950s were a boom time for British aviation. The lessons of six years of war had been learned, and much of the research into jet engines, radar, and aerodynamics had begun to reach fruition. In Britain, jet engine technology led the world while wartime developments into swept-wing design in Germany and their transonic research program were used to give western design teams a quantum leap in aircraft technology. The English Electric Lightning emerged at this time. This supersonic fighter aircraft of the Cold War era is perhaps best remembered for its amazing takeoff performance, its exceptional rate of climb, and its immense speed. Here, Martin Bowman takes us on a photographic journey, illustrating the various landmarks of the Lightning's impressive operational history.

*Fundamentals of Aircraft and Rocket Propulsion* Ahmed F. El-Sayed, 2016-05-25 This book provides a comprehensive basics-to-advanced course in an aero-thermal science vital to the design of engines for either type of craft. The text classifies engines powering aircraft and single/multi-stage rockets, and derives performance parameters for both from basic aerodynamics and thermodynamics laws. Each type of engine is analyzed for optimum performance goals, and mission-appropriate engines selection is explained. *Fundamentals of Aircraft and Rocket Propulsion* provides information about and analyses of: thermodynamic cycles of shaft engines (piston, turboprop, turboshaft and propfan); jet engines (pulsejet, pulse detonation engine, ramjet, scramjet, turbojet and turbofan); chemical and non-chemical rocket engines; conceptual design of modular rocket engines (combustor, nozzle and turbopumps); and conceptual design of different modules of aero-engines in their design and off-design state. Aimed at graduate and final-year undergraduate students, this textbook provides a thorough grounding in the history and classification of both aircraft and rocket engines, important design features of all the engines detailed, and particular consideration of special aircraft such as unmanned aerial and short/vertical takeoff and landing aircraft. End-of-chapter exercises make this a valuable student resource, and the provision of a downloadable solutions manual will be of further benefit for course instructors.

*Mikoyan MiG-23 and MiG-27: Famous Russian Aircraft* Yefim Gordon, Dmitriy Komissarov, 2019-09 Originally conceived as a replacement for the famous MiG-21, changing priorities turned the MiG-23 into a STOL fighter with variable-geometry wings that first flew in June 1967. After two years of testing, the aircraft, codename Flogger, entered service in 1969. From then on development of the Flogger proceeded along two parallel lines originally as a fighter/interceptor with a two-seat trainer variant and later as a fighter/bomber which evolved into the MiG-27 used by the Soviet Air Force. This, in turn, was progressively improved as the MiG-27D/MiG-27M and the MiG-27K. The MiG-23 family was widely exported. New aircraft were supplied to the Soviet Union's Warsaw Pact allies and selected nations in the Middle East, Africa and Asia. Later, second-hand machines were sold from CIS stocks to various parts of the world, which allowed the MiG-23 to remain active abroad longer than in Russia where single-engined combat jets had been phased out in 1997. The Flogger saw a good deal of action. Soviet MiG-23MLDs were actively used in the Afghan War; elsewhere, the fighter variants saw action in Syria (both in against Israel in the 1970s and in the Syrian Civil War), Libya, Iraq, Angola and Sudan. The fighter-bombers also fought in Afghanistan, Iraq, Libya and Sri Lanka. This comprehensive book describes the development and service history of all variants of these aircraft, featuring fleet lists and numerous rare photos and color profiles.

*Foxbat Tales* Mike Guardia,2021-12-15 From the Middle East to the Iron Curtain?the definitive combat history of the Mikoyan-Gurevich MiG-25.July 1967: At the Moscow Air Show, the Soviets unveiled six new state-of-the-art aircraft. From among this lineup of new fighters and interceptors stood the Mikoyan-Gurevich MiG-25-purportedly capable of outrunning and outmaneuvering any aircraft in NATO's inventory.Yet even before its public appearance in Moscow, the MiG-25 had been a grave concern for Western analysts. Indeed, this new interceptor could fly at speeds in excess of Mach 3 and cruise at altitudes heretofore deemed unreachable for a tactical fighter. Moreover, NATO's intelligence community was baffled by how the Soviet Union had cobbled together such a masterpiece of modern engineering.The reality, however, was that this interceptor was a poorly-designed airframe with an oversized motor. Although it excelled as a reconnaissance aircraft, it fared poorly as a dogfighter - and it was typically the loser when pitted against Western aircraft like the F-14 Tomcat and F-15 Eagle.From the Sinai Peninsula?to the Soviet-Afghan War?to Operation Desert Storm, *Foxbat Tales* is the definitive operational and combat history of the MiG-25.

**F-86 Sabre vs MiG-15** Douglas C. Dildy,Warren Thompson,2013-05-20 As the routed North Korean People's Army (NKPA) withdrew into the mountainous reaches of their country and the People's Republic of China (PRC) funneled in its massive infantry formations in preparation for a momentous counter-offensive, both lacked adequate air power to challenge US and UN. Reluctantly, Josef Stalin agreed to provide the requisite air cover, introducing the superior swept-wing MiG-15 to counter the American's straight-wing F-80 jets. This in turn prompted the USAF to deploy its very best – the F-86A Sabre – to counter this threat. Thus began a two-and-a-half-year struggle in the skies known as “MiG Alley.” In this period, the unrelenting campaign for aerial superiority witnessed the introduction of successive models of these two revolutionary jets into combat. This meticulously researched study not only provides technical descriptions of the two types and their improved variants, complete with a “fighter pilot's assessment” of these aircraft, but also chronicles the entire scope of their aerial duel in “MiG Alley” by employing the recollections of the surviving combatants – including Russian, Chinese, and North Korean pilots – who participated.

Soviet X-planes Gordon Yefim,E. Gordon,Bill Gunston,2000 This is the first book to collect stories of the most important Soviet aircraft, including experimental machines from the early 1900s through to the latest Russian prototypes of today. About 150 types are described, each with data and many with extensive drawings.
