Mikoyan-Gurevich MiG-21 Pilot's Flight Operating Instructions
Nato,2008-09 The Mikoyan-Gurevich MiG-21 is known in NATO circles as the ¿Fishbed¿. Designed as a Mach 2.0 interceptor, the plane holds the distinction of being produced in greater numbers than any other jet aircraft. The Fishbed flew in combat in Vietnam, where it held its own against the F-105 Thunderchief. During the 1973 Arab-Israeli War, 17 Israeli aircraft were shot down, for a loss of six Egyptian MiG-21s. The plane also flew in combat in the Indo-Pakistani War of 1971, during the Soviet invasion of Afghanistan, and in Yugoslavia. Today, over 28 of the world¿s air forces continue to fly MiG-21s. Originally printed by NATO, this English-language handbook provides a glimpse inside the cockpit of this incredible plane. The manual was recently declassified and is here reprinted in book form. Care has been taken to preserve the integrity of the text

The MiG-21 Holger Müller,Motorbuch,2019-01-28 This book presents a detailed look at the design and development of the legendary MiG-21, including its powerplant, armament, upgrades, and variants. The Mikoyan-Gurevich MiG-21 was the standard fighter/interceptor aircraft of the Warsaw Pact and it stood up to its western counterparts for decades. This single-engine, supersonic jet fighter entered service in 1959, and in addition to the Soviet Union, almost every eastern European military operated the Mach 2 fighter, including East Germany (which flew more than 500 aircraft of this type), Poland, Romania, Yugoslavia, and others. With approximately 11,000 of all types built, the MiG-21 has been produced in greater numbers than almost any other combat aircraft in history, and has also seen combat with such countries as Vietnam, China, Syria, Iraq, Angola, and others.

Mikoyan-Gurevich Mig-21 Theodore Gianna,2023-02-14 The MiG-21 was the first supersonic fighter from the Soviet Union. It

was first built in the mid-1950s, around the same time as the US Century Series jet fighters, the F-100, F-101, F-102, F-104, F-105, and F-106. However, the MiG 21 would outlive all those fighters. The three largest MiG factories in the USSR manufactured the MiG-21s in many variants. The Moscow Gorki plant (no.21) saw the most extensive production; 5,278 units. The second facility, also in Moscow, was the 'Znamya Truda' (Moscow Aircraft Production Association) plant, which produced 3,203 units, and the no. 31 plant in Tbilisi, Georgia, built 1,677 units. Production lasted 27 years, from 1959 until 1986. MiG fighters for internal and export use totaled an amazing 10,158 MiG-21s built, including the last of a great breed, 2,030 MiG-21bis fighters, and 1,133 MiG-21 UM 'Mongol' training versions. It was the most mass-produced supersonic fighter aircraft in aviation history, and it still holds that title. Although the MiG-21 was an excellent jet fighter, one aircraft had its measure, the McDonnell Douglas F-4 Phantom. The air battles that took place between the two rival jets during the long Vietnam conflict are legendary. This book devotes a section on the MiG's operations in the Vietnam War.

Mikoyan-Gurevich MiG-21 Alexander Mladenov, 2014-06-17
The MiG-21, nicknamed 'Fishbed' by NATO, was the primary Soviet jet fighter from 1972 onward, opposing the F-15 Eagle and F-14 Tomcat worldwide in a variety of conflicts. The MiG-21 firmly holds the title of the world's most widely built and used jet fighter, with over 10,000 units rolling off the lines of three plants in the former Soviet Union. The type was also built under license in India and Czechoslovakia, and without license in China until the late 2000s. Designed as a Mach-2 light tactical fighter, its original prototype, the Ye-6/1, was first flown in 1958. The first production variant of the type, designated the MiG-21F, appeared in 1960 and its improved sub-variant, the MiG-21F-13 (Type 74, NATO reporting name Fishbed-C), was made available for export by 1961. It was a simplified daytime short-range, clear-weather interceptor and tactical fighter. The MiG-21F-13 featured a relatively weak

armament of just two R-3S air-to-air missiles (AA-2 Atoll, a slightly improved reverse-engineered copy of the AIM-9B Sidewinder heat-seeking AAM) with an effective range at low altitude of between 0.27nm/0.5km and 1.1nm/2km. According to its pilots, the MiG-21F-13 was an excellent clear-day interceptor though it had limited combat radius and poor night capability. The light and agile aircraft was designed from the outset to intercept transonic/supersonic bombers and tactical fighters at all altitudes, up to 66,000ft. The MiG-21bis was the last version of the type that took the air for the first time in 1969, with the first production examples rolling off the line in 1972. The MiG-21bis featured a strengthened fuselage, optimised for low-level air combat and ground attack. It was powered by the upgraded R-25-300 turbojet, rated at 40.2kN (9,038lb) dry and 69.65kN (15,653lb) with reheat, featuring a three-minute emergency reheat rating of 97 kN (21,790 lb) at low level. Pilots noted, however, that the heavier 'bis' was much less agile than the MiG-21PF/PFM, and that it behaved like a bull in the air while flying the MiG-21PFM was like riding a stallion. The MiG-21bis was a successful combination of a 1960s airframe and powerplant fitted with a 1970s-vintage analog avionics suite and modern dogfight missiles. By the mid-1980s, although it retained the principal shortcomings of its predecessors - limited operational radius and radar range, lack of beyond-visual-range missiles, poor pilot visibility, mediocre slow speed handling characteristics and high pilot workload, requiring hard training and concentration during the entire sortie - it proved to be an inexpensive and widely popular combat aircraft.

Visual Aircraft Recognition U. S. Army, 2013-01-14 This manual is primarily a ready reference to assist the ground observer in aircraft recognition and identification. It provides information on current operational aircraft of the United States and foreign countries, which may be observed worldwide in the combat area. It can be used as source material for personnel conducting unit training in visual aircraft recognition. The procedures in this

publication apply throughout the US Army. The data is based on the best information available at the time of publication; however, it is not all-inclusive because of some classification guidelines. This publication, by nature, has a built-in time lag, and some aircraft may still be under development or classified at the time of writing, but may be fielded or unclassified at, or after, publication.

Red Eagles Steve Davies,2012-01-24 When two Navy F-14 Tomcats engaged and shot down two Sukhoi Su-22 jet fighters in 1981, they drew on experience and tactics that they had learned from a previous encounter with MiG jet fighters. The difference between the two encounters was that in the first, the enemy fighters were flown by American pilots assigned to a top secret squadron hidden at a remote airfield in the ultra-secret Tonopah Nuclear Test range, Nevada. In the second, the Sukhoi fighters were flown by Libyan pilots attempting to enforce Colonel Qaddafi's 'Line of Death' over the Gulf of Sidra. From the mid-1960s until the end of the Cold War, the United States Air Force acquired and flew Russian-made MiG jets, eventually creating a secret squadron dedicated to exposing American fighter pilots to enemy MiGs. Following underperformance in the Vietnam War, the USAF began to study MiGs in order to improve fighter pilot training. This then developed into the black Constant Peg program. In this program, MiGs were secretly acquired, and made airworthy, a difficult task without manuals or parts. A secret base was found to operate the planes from; and then ace pilots were found and trained to not only fly the assets, but fly them as they were flown by America's enemies. Finally, a program of exposing American fighter pilots to the MiGs was developed. In all, more than 1,600 American fighter pilots would train against America's secret MiGs between 1974 and

1989. Uncovering the story of the secret MiGs in America during the Cold War, and specifically Constant Peg and the 4477th Test & Evaluation Squadron, is a challenge because much of the information has been destroyed, or remains classified. To piece together the story of this group of men who provided America's fighter pilots with a level of training that was the stuff of dreams, author Steve Davies has interviewed over thirty of the Red Eagle pilots, along with other members of the squadron. This paperback edition includes new material on HAVE IDEA and other HAVE programs; making the MiGs airworthy in 1977 from the maintainers' perspective; and the intelligence activities of MiG expert at the Foreign Technology Division Mike Coyle. The result is a fascinating glimpse into a black program that enabled American fighter pilots to go into combat having already met and defeated their first MiG. Hardcover edition ISBN: 9781846033780

Soviet X-planes Gordon Yefim,E. Gordon,Bill Gunston,2000

This is the first book to collect stories of the most important Soviet aircraft, including experimental machines from the early 1900s through to the latest Russian prototypes of today. About 150 types are described, each with data and many with extensive drawings.

The Chinese Air Force Richard P. Hallion,Roger Cliff,Phillip C. Saunders,Center for the Study of Chinese Military Affairs (National Defense University),2012-10-03 Presents revised and edited papers from a October 2010 conference held in Taipei on the Chinese Air Force. The conference was jointly organized by Taiwan's Council for Advanced Policy Studies, the Carnegie Endowment for International Peace, the U.S. National Defense University, and the RAND Corporation. This books offers a complete picture of where the Chinese air force is today, where it has come from, and most importantly, where it is headed.

The Chief Culprit Viktor Suvorov,2013-03-15 Bestselling

author Victor Suvorov probes newly released Soviet documents and reevaluates existing material to analyze Stalin's strategic design to conquer Europe and the reasons behind his controversial

support for Nazi Germany. A former Soviet army intelligence officer, the author explains that Stalin's strategy leading up to World War II grew from Vladimir Lenin's belief that if World War I did not ignite the worldwide Communist revolution, then a second world war would be needed to achieve it. Stalin saw Nazi Germany as the power that would fight and weaken capitalist countries so that Soviet armies could then sweep across Europe. Suvorov reveals how Stalin conspired with German leaders to bypass the Versailles Treaty, which forbade German rearmament, and secretly trained German engineers and officers and provided bases and factories for war. He also calls attention to the 1939 nonaggression pact between the Soviet Union and Germany that allowed Hitler to proceed with his plans to invade Poland, fomenting war in Europe. Suvorov debunks the theory that Stalin was duped by Hitler and that the Soviet Union was a victim of Nazi aggression. Instead, he makes the case that Stalin neither feared Hitler nor mistakenly trusted him. Suvorov maintains that after Germany occupied Poland, defeated France, and started to prepare for an invasion of Great Britain, Hitler's intelligence services detected the Soviet Union's preparations for a major war against Germany. This detection, he argues, led to Germany's preemptive war plan and the launch of an invasion of the USSR. Stalin emerges from the pages of this book as a diabolical genius consumed by visions of a worldwide Communist revolution at any cost—a leader who wooed Hitler and Germany in his own effort to conquer the world. In contradicting traditional theories about Soviet planning, the book is certain to provoke debate among historians throughout the world.

The English Electric Lightning Martin W.

Bowman, 2018-01-30 A photo-packed history of this Cold War-era supersonic fighter aircraft. The early 1950s were a boom time for British aviation. The lessons of six years of war had been learned, and much of the research into jet engines, radar, and aerodynamics had begun to reach fruition. In Britain, jet engine

technology led the world while wartime developments into swept-wing design in Germany and their transonic research program were used to give western design teams a quantum leap in aircraft technology. The English Electric Lightning emerged at this time. This supersonic fighter aircraft of the Cold War era is perhaps best remembered for its amazing takeoff performance, its exceptional rate of climb, and its immense speed. Here, Martin Bowman takes us on a photographic journey, illustrating the various landmarks of the Lightning's impressive operational history.

Sweeping Forward ,2013 The X-29 was an unusual aircraft with a truly unique silhouette. It combined many features that challenged the technologies of its day and represented special problems for the developers and the team of testers responsible for documenting its features and design goals. This book is a look at the big picture of what this team accomplished in a relatively fast-paced test program involving the truly unique X-29.

Fundamentals of Aircraft and Rocket Propulsion Ahmed F. El-Sayed,2016-05-25 This book provides a comprehensive basics-to-advanced course in an aero-thermal science vital to the design of engines for either type of craft. The text classifies engines powering aircraft and single/multi-stage rockets, and derives performance parameters for both from basic aerodynamics and thermodynamics laws. Each type of engine is analyzed for optimum performance goals, and mission-appropriate engines selection is explained. Fundamentals of Aircraft and Rocket Propulsion provides information about and analyses of: thermodynamic cycles of shaft engines (piston, turboprop, turboshaft and propfan); jet engines (pulsejet, pulse detonation engine, ramjet, scramjet, turbojet and turbofan); chemical and non-chemical rocket engines; conceptual design of modular rocket engines (combustor, nozzle and turbopumps); and conceptual design of different modules of aero-engines in their design and off-design state. Aimed at graduate and final-year undergraduate students, this textbook provides a thorough grounding in the

history and classification of both aircraft and rocket engines, important design features of all the engines detailed, and particular consideration of special aircraft such as unmanned aerial and short/vertical takeoff and landing aircraft. End-of-chapter exercises make this a valuable student resource, and the provision of a downloadable solutions manual will be of further benefit for course instructors.

F-22 Raptor Steve Pace, 1999 Provides history on America's next generation of fighter plane, known as the F-22 Raptor.

Korean War Aces Robert F Dorr, 2013-01-20 The first virtually all-jet war, the conflict in Korea saw F-86 Sabres of the USAF take on MiG-15s of the North Korean and Chinese air forces. Although the Allied pilots were initially taken aback by the ability of the communist fighter in combat, sound training and skilful leadership soon enabled Sabre pilots to dominate the dogfights over the Yalu River. In all 39 F-86 pilots achieved ace status, and a number of these are profiled in this volume, as are notable pilots from the US Navy, Marine Corps and Royal Navy and, for the first time, the handful of MiG-15 aces.

Foxbats Over Dimona Isabella Ginor, Gideon Remez, 2008-10-01 Isabella Ginor and Gideon Remez's groundbreaking history of the Six-Day War in 1967 radically changes our understanding of that conflict, casting it as a crucial arena of Cold War intrigue that has shaped the Middle East to this day. The authors, award-winning Israeli journalists and historians, have investigated newly available documents and testimonies from the former Soviet Union, cross-checked them against Israeli

and Western sources, and arrived at fresh and startling conclusions. Contrary to previous interpretations, Ginor and Remez's book shows that the Six-Day War was the result of a joint Soviet-Arab gambit to provoke Israel into a preemptive attack. The authors reveal how the Soviets received a secret Israeli message indicating that Israel, despite its official ambiguity, was about to acquire nuclear weapons. Determined to destroy Israel's nuclear program before it could produce an atomic bomb, the Soviets then began preparing for war--well before Moscow accused Israel of offensive intent, the overt trigger of the crisis. Ginor and Remez's startling account details how the Soviet-Arab onslaught was to be unleashed once Israel had been drawn into action and was branded as the aggressor. The Soviets had submarine-based nuclear missiles poised for use against Israel in case it already possessed and tried to use an atomic device, and the USSR prepared and actually began a marine landing on Israel's shores backed by strategic bombers and fighter squadrons. They sent their most advanced, still-secret aircraft, the MiG-25 Foxbat, on provocative sorties over Israel's Dimona nuclear complex to prepare the planned attack on it, and to scare Israel into making the first strike. It was only the unpredicted devastation of Israel's response that narrowly thwarted the Soviet design.
