Making Italian Jews Carlotta Ferrara degli Uberti, 2016-11-10 This book depicts the cultural imagination of the Italian-Jewish minority from the unification of the country to the end of the First World War. The creation of an Italian nation-state introduced new problems and new opportunities for its citizens. What did it mean for the Jewish minority? How could members of the minority combine and redefine Jewishness and Italianness in a radically new political and legal framework? Key concepts such as family, religion, nation, assimilation and – later – Zionism are observed as they shift and change over time. The interaction between the public and private spheres plays a pivotal role in the analysis, and the self-fashioning of Italian Jewish élites is read alongside the evolution of the cultural stereotypes typical of the time. Reinterpreting the Italian national patriotic narrative through the eyes of the Jews, Carlotta Ferrara degli Uberti is able to unveil its less known layers and articulations, while at the same time offering a new perspective from which to read the modern Jewish experience in the Western World.

Engineering Thermofluids Mahmoud Massoud, 2005-12-05 Thermofluids, while a relatively modern term, is applied to the well-established field of thermal sciences, which is comprised of various intertwined disciplines. Thus mass, momentum, and heat transfer constitute the fundamentals of thermofluids. This book discusses thermofluids in the context of thermodynamics, single- and two-phase flow, as well as heat transfer associated with single- and two-phase flows. Traditionally, the field of thermal sciences is taught in universities by requiring students to study engineering thermodynamics, fluid mechanics, and heat transfer, in that order. In graduate school, these topics

are discussed at more advanced levels. In recent years, however, there have been attempts to integrate these topics through a unified approach. This approach makes sense as thermal design of widely varied systems ranging from hair dryers to semiconductor chips to jet engines to nuclear power plants is based on the conservation equations of mass, momentum, angular momentum, energy, and the second law of thermodynamics. While integrating these topics has recently gained popularity, it is hardly a new approach. For example, Bird, Stewart, and Lightfoot in *Transport Phenomena*, Rohsenow and Choi in *Heat, Mass, and Momentum Transfer*, El-Wakil, in *Nuclear Heat Transport*, and Todreas and Kazimi in *Nuclear Systems* have pursued a similar approach. These books, however, have been designed for advanced graduate level courses. More recently, undergraduate books using an integrated approach are appearing.

The Media Welfare State Ole J. Mjøs, Hallvard Moe, Trine Syvertsen, Gunn Sara Enli, 2014-10-22
The *Media Welfare State: Nordic Media in the Digital Era* comprehensively addresses the central dynamics of the digitalization of the media industry in the Nordic countries—Sweden, Norway, Denmark, Finland, and Iceland—and the ways media organizations there are transforming to address the new digital environment. Taking a comparative approach, the authors provide an overview of media institutions, content, use, and policy throughout the region, focusing on the impact of information and communication technology/internet and digitalization on the Nordic media sector. Illustrating the shifting media landscape the authors draw on a wide range of cases, including developments in the press, television, the public service media institutions, and telecommunication.

Conservation by Proxy Tim Caro, 2010-06-23 The vast scope of conservation problems has forced biologists and managers to rely on surrogate species to serve as shortcuts to guide their decision making. These species—known by a host of different terms, including indicator, umbrella, and flagship species—act as proxies to represent larger conservation issues, such as the location of biodiversity hotspots or general ecosystem health. Synthesizing an immense body of literature, conservation biologist and field researcher Tim Caro offers systematic definitions of surrogate species concepts, explores biological theories that underlie them, considers how surrogate species are chosen, critically examines evidence for and against their utility, and makes recommendations for their continued use. The book clarifies terminology and contrasts how different terms are used in the real world, considers the ecological, taxonomic, and political underpinnings of these shortcuts, identifies criteria that make for good surrogate species, outlines the circumstances where the application of the surrogate species concept shows promise. *Conservation by Proxy* is a benchmark reference that provides clear definitions and common understanding of the evidence and theory behind surrogate species. It is the first book to review and bring together literature on more than fifteen types of surrogate species, enabling us to assess their role in conservation and offering guidelines on how they can be used most effectively.

The Arctic and World Order Kristina Spohr, Daniel S. Hamilton, Jason C. Moyer, 2021-01-26 The Arctic, long described as the world's last frontier, is quickly becoming our first frontier—the front line in a world of more diffuse power, sharper geopolitical competition, and deepening interdependencies between people and nature. A space of often-bitter cold, the Arctic is the fastest-warming place on earth. It is humanity's canary in the coal mine—an early warning sign of the world's climate crisis. The Arctic "regime" has pioneered many innovative means of governance among often-contentious state

and non-state actors. Instead of being the “last white dot on the map,” the Arctic is where the contours of our rapidly evolving world may first be glimpsed. In this book, scholars and practitioners—from Anchorage to Moscow, from Nuuk to Hong Kong—explore the huge political, legal, social, economic, geostrategic and environmental challenges confronting the Arctic regime, and what this means for the future of world order.

Development of Novel Vaccines Alexander von Gabain, Christoph Klade, 2012-04-23 “Development of novel vaccines” gives an overview of the tasks in basic research leading to the final product – the vaccine and its applications, belonging to the most complex biologics in the pharmaceutical field. Distinct from most textbooks in the vaccine arena, the current issue focuses on the translational aspect, namely, how research results can be transformed into life-saving medical interventions. Each chapter of the book deals with one important paradigm for the development of novel vaccines, along the value chain towards the final vaccine, and furthermore, with the inevitable tools required for this process. Contributions are prepared by teams of scientists, all of whom are experts in the field, most of them anchored in biomedical organizations devoted to translational culture, thereby lighting the certain topics from different views. This volume is a must read for researchers engaged in vaccine development and who really want to see their research results to become a product.

A Global Doll's House Julie Holledge, Jonathan Bollen, Frode Helland, Joanne Tompkins, 2016-09-15 This book addresses a deceptively simple question: what accounts for the global success of *A Doll's House*, Henrik Ibsen's most popular play? Using maps, networks, and images to explore the world history of the play's production, this question is considered from two angles: cultural transmission and adaptation. Analysing the play's transmission reveals the social, economic, and political forces that have secured its place in the canon of world drama; a comparative study of the play's 135-year

production history across five continents offers new insights into theatrical adaptation. Key areas of research include the global tours of nineteenth-century actress-managers, Norway's soft diplomacy in promoting gender equality, representations of the female performing body, and the sexual vectors of social change in theatre.

Composites Manufacturing Sanjay Mazumdar, 2001-12-27 More and more companies manufacture reinforced composite products. To meet the market need, researchers and industries are developing manufacturing methods without a reference that thoroughly covers the manufacturing guidelines. *Composites Manufacturing: Materials, Product, and Process Engineering* fills this void. The author presents a fundamental

Writing for Science Robert Goldbort, 2006-01-01 This book encompasses the entire range of writing skills that today's experimental scientist may need to employ. Chapters cover routine forms, such as laboratory notes, abstracts, and memoranda; dissertations; journal articles; and grant proposals. Robert Goldbort discusses how best to approach various writing tasks as well as how to deal with the everyday complexities that may get in the way of ideal practice--difficult collaborators, experiments gone wrong, funding rejections. He underscores the importance of an ethical approach to science and scientific communication and insists on the necessity of full disclosure.

Biodiversity and Human Health Francesca Grifo, Joshua Rosenthal, 1997-02-01 The implications of biodiversity loss for the global environment have been widely discussed, but only recently has attention been paid to its direct and serious effects on human health. Biodiversity loss affects the spread of human diseases, causes a loss of medical models, diminishes the supplies of raw materials for drug discovery and biotechnology, and threatens food production and water quality. *Biodiversity and Human Health* brings together leading thinkers on the global environment and biomedicine to

explore the human health consequences of the loss of biological diversity. Based on a two-day conference sponsored by the National Institutes of Health, the National Science Foundation, and the Smithsonian Institution, the book opens a dialogue among experts from the fields of public health, biology, epidemiology, botany, ecology, demography, and pharmacology on this vital but often neglected concern. Contributors discuss the uses and significance of biodiversity to the practice of medicine today, and develop strategies for conservation of these critical resources. Topics examined include: the causes and consequences of biodiversity loss emerging infectious diseases and the loss of biodiversity the significance and use of both prescription and herbal biodiversity-derived remedies indigenous and local peoples and their health care systems sustainable use of biodiversity for medicine an agenda for the future In addition to the editors, contributors include Anthony Artuso, Byron Bailey, Jensa Bell, Bhaswati Bhattacharya, Michael Boyd, Mary S. Campbell, Eric Chivian, Paul Cox, Gordon Cragg, Andrew Dobson, Kate Duffy-Mazan, Robert Engelman, Paul Epstein, Alexandra S. Fairfield, John Grupenhoff, Daniel Janzen, Catherine A. Laughin, Katy Moran, Robert McCaleb, Thomas Mays, David Newman, Charles Peters, Walter Reid, and John Vandermeer. The book provides a common framework for physicians and biomedical researchers who wish to learn more about environmental concerns, and for members of the environmental community who desire a greater understanding of biomedical issues.

The Extractive Zone Macarena Gómez-Barris, 2017-11-03 In *The Extractive Zone* Macarena Gómez-Barris traces the political, aesthetic, and performative practices that emerge in opposition to the ruinous effects of extractive capital. The work of Indigenous activists, intellectuals, and artists in spaces Gómez-Barris labels extractive zones—majority indigenous regions in South America noted for their biodiversity and long history of exploitative natural resource extraction—resist and refuse the

terms of racial capital and the continued legacies of colonialism. Extending decolonial theory with race, sexuality, and critical Indigenous studies, Gómez-Barris develops new vocabularies for alternative forms of social and political life. She shows how from Colombia to southern Chile artists like filmmaker Huichaqueo Perez and visual artist Carolina Caycedo formulate decolonial aesthetics. She also examines the decolonizing politics of a Bolivian anarcho-feminist collective and a coalition in eastern Ecuador that protects the region from oil drilling. In so doing, Gómez-Barris reveals the continued presence of colonial logics and locates emergent modes of living beyond the boundaries of destructive extractive capital.

Medium-Range Weather Prediction Austin Woods, 2006-01-16 This book provides an overview of the early years of the European Centre for Medium-Range Weather Forecasts, and reviews the work of the institute over the past 30 years, describing along the way the European approach to medium-range weather forecasting. Its combination of historical view and scientific insight is unique.

African Fractals Ron Eglash, 1999 Fractals are characterized by the repetition of similar patterns at ever-diminishing scales. Fractal geometry has emerged as one of the most exciting frontiers on the border between mathematics and information technology and can be seen in many of the swirling patterns produced by computer graphics. It has become a new tool for modeling in biology, geology, and other natural sciences. Anthropologists have observed that the patterns produced in different cultures can be characterized by specific design themes. In Europe and America, we often see cities laid out in a grid pattern of straight streets and right-angle corners. In contrast, traditional African settlements tend to use fractal structures-circles of circles of circular dwellings, rectangular walls enclosing ever-smaller rectangles, and streets in which broad avenues branch down to tiny footpaths with striking geometric repetition. These indigenous fractals are not limited to architecture; their

recursive patterns echo throughout many disparate African designs and knowledge systems. Drawing on interviews with African designers, artists, and scientists, Ron Eglash investigates fractals in African architecture, traditional hairstyling, textiles, sculpture, painting, carving, metalwork, religion, games, practical craft, quantitative techniques, and symbolic systems. He also examines the political and social implications of the existence of African fractal geometry. His book makes a unique contribution to the study of mathematics, African culture, anthropology, and computer simulations.

Morris, Jiahua Fan, 1998 Focusing on reservoir sedimentation management and control, this work defines the nature and severity of sedimentation, reviews relevant physical processes, describes techniques used to combat sedimentation, and presents detailed case studies.

East Asia's Changing Urban Landscape World Bank, 2015-01-07 This study uses satellite imagery and population data for the decade 2000 to 2010 in order to map urban areas and populations across the entire East Asia region, identifying 869 urban areas with populations over 100,000, allowing us for the first time to understand patterns in urbanization in East Asia.

Principles of Turbomachinery Seppo A. Korpela, 2019-07-11 A newly updated and expanded edition that combines theory and applications of turbomachinery while covering several different types of turbomachinery. In mechanical engineering, turbomachinery describes machines that transfer energy between a rotor and a fluid, including turbines, compressors, and pumps. Aiming for a unified treatment of the subject matter, with consistent notation and concepts, this new edition of a highly popular book provides all new information on turbomachinery, and includes 50% more exercises than the previous edition. It allows readers to easily move from a study of the most successful textbooks on thermodynamics and fluid dynamics to the subject of turbomachinery. The book also builds

concepts systematically as progress is made through each chapter so that the user can progress at their own pace. Principles of Turbomachinery, 2nd Edition provides comprehensive coverage of everything readers need to know, including chapters on: thermodynamics, compressible flow, and principles of turbomachinery analysis. The book also looks at steam turbines, axial turbines, axial compressors, centrifugal compressors and pumps, radial inflow turbines, hydraulic turbines, hydraulic transmission of power, and wind turbines. New chapters on droplet laden flows of steam and oblique shocks help make this an incredibly current and well-rounded resource for students and practicing engineers. Includes 50% more exercises than the previous edition Uses MATLAB or GNU/OCTAVE for all the examples and exercises for which computer calculations are needed, including those for steam Allows for a smooth transition from the study of thermodynamics, fluid dynamics, and heat transfer to the subject of turbomachinery for students and professionals Organizes content so that more difficult material is left to the later sections of each chapter, allowing instructors to customize and tailor their courses for their students Principles of Turbomachinery is an excellent book for students and professionals in mechanical, chemical, and aeronautical engineering.
