Demonic History Kirk Wetters, 2014-08-31 In this ambitious book, Kirk Wetters traces the genealogy of the demonic in German literature from its imbrications in Goethe to its varying legacies in the work of essential authors, both canonical and less well known, such as Gundolf, Spengler, Benjamin, Lukács, and Doderer. Wetters focuses especially on the philological and metaphorological resonances of the demonic from its core formations through its appropriations in the tumultuous twentieth century. Propelled by equal parts theoretical and historical acumen, Wetters explores the ways in which the question of the demonic has been employed to multiple theoretical, literary, and historico-political ends. He thereby produces an intellectual history that will be consequential both to scholars of German literature and to comparatists.

Geographical Data Acquisition Yong-Qi Chen, Yuk-Cheung Lee, 2012-12-06 This book presents the theory and methodology of geographical data acquisition, providing comprehensive coverage ranging from the definition of geo-referencing systems and transformation between these systems to the acquisition of geographical data using different methods. The material provides readers with a good understanding of the nature of spatial data, the accuracy of spatial data, and the theory behind various data acquisition methodologies.

Statistical Relational Artificial Intelligence Luc De Raedt, Kristian Kersting, Sriraam Natarajan, David Poole, 2016-03-24 An intelligent agent interacting with the real world will encounter individual people, courses, test results, drugs prescriptions, chairs, boxes, etc., and needs to reason about properties of these individuals and relations among them as well as cope with uncertainty. Uncertainty has been studied in probability theory and graphical models, and relations have been studied in logic, in particular in the predicate calculus and its extensions. This book examines the foundations of combining

logic and probability into what are called relational probabilistic models. It introduces representations, inference, and learning techniques for probability, logic, and their combinations. The book focuses on two representations in detail: Markov logic networks, a relational extension of undirected graphical models and weighted first-order predicate calculus formula, and Problog, a probabilistic extension of logic programs that can also be viewed as a Turing-complete relational extension of Bayesian networks.

Work on Myth Hans Blumenberg, 1988-03-18 In this rich examination of how we inherit and transform myths, Hans Blumenberg continues his study of the philosophical roots of the modern world. *Work on Myth* is in five parts. The first two analyze the characteristics of myth and the stages in the West's work on myth, including long discussions of such authors as Freud, Joyce, Cassirer, and Valéry. The latter three parts present a comprehensive account of the history of the Prometheus myth, from Hesiod and Aeschylus to Gide and Kafka. This section includes a detailed analysis of Goethe's lifelong confrontation with the Prometheus myth, which is a unique synthesis of psychobiography and history of ideas. *Work on Myth* is included in the series *Studies in Contemporary German Social Thought*, edited by Thomas McCarthy.

The Veil of Isis Pierre Hadot, 2006 Nearly twenty-five hundred years ago the Greek thinker Heraclitus supposedly uttered the cryptic words *Phusis kruptesthai philei*. How the aphorism, usually translated as Nature loves to hide, has haunted Western culture ever since is the subject of this engaging study by Pierre Hadot. Taking the allegorical figure of the veiled goddess Isis as a guide, and drawing on the work of both the

ancients and later thinkers such as Goethe, Rilke, Wittgenstein, and Heidegger, Hadot traces successive interpretations of Heraclitus' words. Over time, Hadot finds, Nature loves to hide has meant that all that lives tends to die; that Nature wraps herself in myths; and (for Heidegger) that Being unveils as it veils itself. Meanwhile the pronouncement has been used to explain everything from the opacity of the natural world to our modern angst. From these kaleidoscopic exegeses and usages emerge two contradictory approaches to nature: the Promethean, or experimental-questing, approach, which embraces technology as a means of tearing the veil from Nature and revealing her secrets; and the Orphic, or contemplative-poetic, approach, according to which such a denuding of Nature is a grave trespass. In place of these two attitudes Hadot proposes one suggested by the Romantic vision of Rousseau, Goethe, and Schelling, who saw in the veiled Isis an allegorical expression of the sublime. Nature is art and art is nature, Hadot writes, inviting us to embrace Isis and all she represents: art makes us intensely aware of how completely we ourselves are not merely surrounded by nature but also part of nature.

Hollywood Highbrow Shyon Baumann, 2018-06-05 Today's moviegoers and critics generally consider some Hollywood products--even some blockbusters--to be legitimate works of art. But during the first half century of motion pictures very few Americans would have thought to call an American movie art. Up through the 1950s, American movies were regarded as a form of popular, even lower-class, entertainment. By the 1960s and 1970s, however, viewers were regularly judging Hollywood films by artistic criteria previously applied only to high art forms. In *Hollywood Highbrow*, Shyon Baumann for the first time tells how social and cultural forces radically changed the public's perceptions of American movies just as those forces were radically changing the movies themselves. The development in the United States of an appreciation of film as an art was,

Baumann shows, the product of large changes in Hollywood and American society as a whole. With the postwar rise of television, American movie audiences shrank dramatically and Hollywood responded by appealing to richer and more educated viewers. Around the same time, European ideas about the director as artist, an easing of censorship, and the development of art-house cinemas, film festivals, and the academic field of film studies encouraged the idea that some American movies--and not just European ones--deserved to be considered art.

Computational Sustainability Jörg Lässig, Kristian Kersting, Katharina Morik, 2016-04-20 The book at hand gives an overview of the state of the art research in Computational Sustainability as well as case studies of different application scenarios. This covers topics such as renewable energy supply, energy storage and e-mobility, efficiency in data centers and networks, sustainable food and water supply, sustainable health, industrial production and quality, etc. The book describes computational methods and possible application scenarios.

Goethe's Concept of the Daemonic Angus James Nicholls, 2006 The first book to examine Goethe's writings on the daemonic in relation to both Classical philosophy and German Idealism. For Plato, the daemonic is a sensibility that brings individuals into contact with divine knowledge; Socrates was also inspired by a divine voice known as his daimonion. Goethe was introduced to this ancient concept by Hamann and Herder, who associated it with the aesthetic category of genius. This book shows how the young Goethe depicted the idea of daemonic genius in works of the Storm and Stress period, before exploring the daemonic in a series of later poetic and autobiographical works. Reading Goethe's works on the daemonic through theorists such as Lukács, Benjamin, Gadamer, Adorno, and Blumenberg, Nicholls contends that they contain arguments concerning reason, nature, and subjectivity that are central to both European Romanticism and the Enlightenment. Angus Nicholls is Claussen-Simon

Foundation Research Lecturer in German and Comparative Literature at the Centre for Anglo-German Cultural Relations in the Department of German, Queen Mary, University of London.

Boosted Statistical Relational Learners Sriraam

Natarajan,Kristian Kersting,Tushar Khot,Jude Shavlik,2015-03-03

This SpringerBrief addresses the challenges of analyzing multi-relational and noisy data by proposing several Statistical Relational Learning (SRL) methods. These methods combine the expressiveness of first-order logic and the ability of probability theory to handle uncertainty. It provides an overview of the methods and the key assumptions that allow for adaptation to different models and real world applications. The models are highly attractive due to their compactness and comprehensibility but learning their structure is computationally intensive. To combat this problem, the authors review the use of functional gradients for boosting the structure and the parameters of statistical relational models. The algorithms have been applied successfully in several SRL settings and have been adapted to several real problems from Information extraction in text to medical problems. Including both context and well-tested applications, *Boosting Statistical Relational Learning from Benchmarks to Data-Driven Medicine* is designed for researchers and professionals in machine learning and data mining. Computer engineers or students interested in statistics, data management, or health informatics will also find this brief a valuable resource.

An Introduction to Lifted Probabilistic Inference Guy

Van den Broeck,Kristian Kersting,Sriraam Natarajan,David Poole,2021-08-17 Recent advances in the area of lifted inference, which exploits the structure inherent in relational probabilistic models. Statistical relational AI (StaRAI) studies the integration of reasoning under uncertainty with reasoning about individuals and relations. The representations used are often called relational probabilistic models. Lifted inference is about how to exploit the structure inherent in relational probabilistic models, either in the

way they are expressed or by extracting structure from observations. This book covers recent significant advances in the area of lifted inference, providing a unifying introduction to this very active field. After providing necessary background on probabilistic graphical models, relational probabilistic models, and learning inside these models, the book turns to lifted inference, first covering exact inference and then approximate inference. In addition, the book considers the theory of liftability and acting in relational domains, which allows the connection of learning and reasoning in relational domains.

Probabilistic Inductive Logic Programming Luc De Raedt, Paolo Frasconi, Kristian Kersting, Stephen H. Muggleton, 2008-02-26 This book provides an introduction to probabilistic inductive logic programming. It places emphasis on the methods based on logic programming principles and covers formalisms and systems, implementations and applications, as well as theory.

Naturally Nude in Nature Amazilia Photography, 2019-08-08 One of the revelations with photography is that monochrome images often enable us to see the world and people in new, and often deeper, ways. Colour is such a dominant part of our vision that we often overlook more subtle variations in tones and textures. This book is a companion volume to the colour book *Rewilding the Human Spirit*, but instead of repeating the contemporary narrative contained in that book, this work includes a range of directly relevant quotations which show and help to explain humans' deep and intrinsic connection to our natural world. The importance of landscape, nature and our natural world is shown both through these quotations and through just over 130 monochrome fine art nude images, involving 15 different women aged 24 to 43. The works have been shot in a range of natural locations around Europe.

Introduction to Statistical Relational Learning Lise Getoor, Ben Taskar, 2019-09-22 Advanced statistical modeling and

knowledge representation techniques for a newly emerging area of machine learning and probabilistic reasoning; includes introductory material, tutorials for different proposed approaches, and applications. Handling inherent uncertainty and exploiting compositional structure are fundamental to understanding and designing large-scale systems. Statistical relational learning builds on ideas from probability theory and statistics to address uncertainty while incorporating tools from logic, databases and programming languages to represent structure. In *Introduction to Statistical Relational Learning*, leading researchers in this emerging area of machine learning describe current formalisms, models, and algorithms that enable effective and robust reasoning about richly structured systems and data. The early chapters provide tutorials for material used in later chapters, offering introductions to representation, inference and learning in graphical models, and logic. The book then describes object-oriented approaches, including probabilistic relational models, relational Markov networks, and probabilistic entity-relationship models as well as logic-based formalisms including Bayesian logic programs, Markov logic, and stochastic logic programs. Later chapters discuss such topics as probabilistic models with unknown objects, relational dependency networks, reinforcement learning in relational domains, and information extraction. By presenting a variety of approaches, the book highlights commonalities and clarifies important differences among proposed approaches and, along the way, identifies important representational and algorithmic issues. Numerous applications are provided throughout.

Punktown Jeffrey Thomas, Michael Marshall

Smith, 2005-05-01 Jeffrey Thomas' collection Punktown explored the streets and back alleys of a futuristic and nightmarish urbanscape in a series of unconnected short stories. In *Punktown: Third Eye*, Thomas has teleported authors Simon Logan, Jonathan Lyons, Charlee Jacob, Paul G. Tremblay, Michael McCarty, Mark

McLaughlin, Garrett Peck, Thomas Andrew Hughes, and Scott Thomas into the city to pen their own tales of its citizens, aliens, mutations, and sentient machines. These talented authors bring a new perspective, a personal vision, a third eye view to the phantasmopolis that is Punktown.

An Inductive Logic Programming Approach to Statistical Relational Learning Kristian Kersting, 2006 Talks about Logic Programming, Uncertainty Reasoning and Machine Learning. This book includes definitions that circumscribe the area formed by extending Inductive Logic Programming to cases annotated with probability values. It investigates the approach of Learning from proofs and the issue of upgrading Fisher Kernels to Relational Fisher Kernels.

Animated Encounters Daisy Yan Du, 2019-02-28 China's role in the history of world animation has been trivialized or largely forgotten. In *Animated Encounters* Daisy Yan Du addresses this omission in her study of Chinese animation and its engagement with international forces during its formative period, the 1940s-1970s. She introduces readers to transnational movements in early Chinese animation, tracing the involvement of Japanese, Soviet, American, Taiwanese, and China's ethnic minorities, at socio-historical or representational levels, in animated filmmaking in China. Du argues that Chinese animation was international almost from its inception and that such border-crossing exchanges helped make it "Chinese" and subsequently transform the history of world animation. She highlights animated encounters and entanglements to provide an alternative to current studies of the subject characterized by a preoccupation with essentialist ideas of "Chineseness" and further questions the long-held belief that the forty-year-period in question was a time of cultural isolationism for China due to constant wars and revolutions. China's socialist era, known for the pervasiveness of its political propaganda and suppression of the arts, unexpectedly witnessed a golden age of animation. Socialist collectivism,

reinforced by totalitarian politics and centralized state control, allowed Chinese animation to prosper and flourish artistically. In addition, the double marginality of animation—a minor art form for children—coupled with its disarming qualities and intrinsic malleability and mobility, granted animators and producers the double power to play with politics and transgress ideological and geographical borders while surviving censorship, both at home and abroad. A captivating and enlightening history, *Animated Encounters* will attract scholars and students of world film and animation studies, children's culture, and modern Chinese history.
