Elizabeth Truswell

A Memory of Ice Elizabeth Truswell, 2019-08-01 In the southern summer of 1972/73, the Glomar Challenger was the first vessel of the international Deep Sea Drilling Project to venture into the seas surrounding Antarctica, confronting severe weather and ever-present icebergs. *A Memory of Ice* presents the science and the excitement of that voyage in a manner readable for non-scientists. Woven into the modern story is the history of early explorers, scientists and navigators who had gone before into the Southern Ocean. The departure of the Glomar Challenger from Fremantle took place 100 years after the HMS Challenger weighed anchor from Portsmouth, England, at the start of its four-year voyage, sampling and dredging the world's oceans. Sailing south, the Glomar Challenger crossed the path of James Cook's HMS Resolution, then on its circumnavigation of Antarctica in search of the Great South Land. Encounters with Lieutenant Charles Wilkes of the US Exploring Expedition and Douglas Mawson of the Australasian Antarctic Expedition followed. In the Ross Sea, the voyages of the HMS Erebus and HMS Terror under James Clark Ross, with the young Joseph Hooker as botanist, were ever present. The story of the Glomar Challenger's iconic voyage is largely told through the diaries of the author, then a young scientist experiencing science at sea for the first time. It weaves together the physical history of Antarctica with how we have come to our current knowledge of the polar continent. This is an attractive, lavishly illustrated and curiosity-satisfying read for the general public as well as for scholars of science.

Scientific Ocean Drilling National Research Council, Division on Earth and Life Studies, Ocean Studies Board, Committee on the Review of the Scientific Accomplishments and Assessment of the Potential for Future Transformative Discoveries with U.S.-Supported Scientific

Ocean Drilling, 2012-01-22 Through direct exploration of the seafloor, U.S.-supported scientific ocean drilling programs have significantly contributed to a broad range of scientific accomplishments in Earth science disciplines, shaping understanding of Earth systems and enabling new fields of inquiry. Scientific Ocean Drilling: Accomplishments and Challenges reviews the scientific accomplishments of U.S.-supported scientific ocean drilling over the past four decades. The book evaluates how the programs (Deep Sea Drilling Project [DSDP], 1968-1983, Ocean Drilling Program [ODP], 1984-2003, and Integrated Ocean Drilling Program [IODP], 2003-2013) have shaped understanding of Earth systems and Earth history and assessed the role of scientific ocean drilling in enabling new fields of inquiry. This book also assesses the potential for transformative discoveries for the next proposed phase of scientific ocean drilling, which is scheduled to run from 2013 to 2023. The programs' technological innovations have played a strong role in these accomplishments. The science plan for the proposed 2013-2023 program presents a strong case for the continuation of scientific ocean drilling. Each of the plan's four themes identifies compelling challenges with potential for transformative science that could only be addressed through scientific ocean drilling, although some challenges appear to have greater potential than others. Prioritizing science plan challenges and integrating multiple objectives into single expeditions would help use resources more effectively, while encouraging technological innovations would continue to increase the potential for groundbreaking science.

World Social Science Report 2010 United Nations Educational, Scientific and Cultural Organization,2010-01-01 Social science from Western countries continues to have the greatest global influence, but the field is expanding rapidly in Asia and Latin America, particularly in China and Brazil. In sub-Saharan Africa, social scientists from South Africa, Nigeria andKenya produce 75% of academic publications. In South Asia, barring some centres of excellence in India, social sciences as a whole have low priority. These are a few of the findings from World Social Science Report, 2010: Knowledge divides. Produced by the International Social Science Council (ISSC) and co-published with UNESCO, the Report is the first comprehensive overview of the field in over a decade. Hundreds of social scientists from around the world contributed their expertise to the publication. Gudmund Hernes, President of the ISSC, Adebayo Olukoshi, Director of the United Nations African Institute for Economic Development and Planning

(IDEP), Hebe Vessuri, Director, Venezuelan Institute for Scientific Research (IVIC), and François Héran, Director of Research, National Institute for Demographic Studies (INED), France, are among the experts who presented the Report during its official launch at UNESCO Headquarters in Paris on 25 June 2010.

Introduction to Buddhist Economics Ernest C. H. Ng, 2020-01-30
Living in a market-driven economy where short-term profit and economic growth appear to be the ultimate goal, this book explores how Buddhist teachings could bridge the divide between our spiritual and material needs and reconcile the tension between doing good for social interest and doing well for financial success. This book serves as a pioneering effort to systematically introduce Buddhist Economics as an interdisciplinary subject to audience with limited background in either Buddhism or economics. It elaborates some core concepts in Buddhist teachings, their relevance to economics, and means of achieving sustainability for individuals, society and the environment with the cultivation of ethical living and well-being. Through scholarly research from relevant fields including Buddhist studies, economics, behavioral finance, cognitive science, and psychology, this book illustrates the relevance of Buddhist values in the contemporary economy and society, as well as the efficacy of Buddhist perspectives on decision-making in daily life.

Nationalisms of Japan Brian J. McVeigh, 2004 In this fresh and original analysis, Brian J. McVeigh confronts both the demonizers and apologists of Japan. He argues persuasively that far from being unique, Japanese nationalism becomes demystified once 'management' and 'mysticism'--the same processes and practices that operate in other national states--are taken into account. Stripping away Orientalist-inspired misconceptions, the author stresses the variety and relative

intensity of nationalisms, ranging from economic, ethnic, and educational to cultural, gendered, and religious. He moves beyond state-centered ideologies to explore the linkages between official and popular nationalisms and the complex interplay of ethnocultural, ethnopolitical, and ethnoracial forms of identity. The ambiguity and everydayness of nationalism, McVeigh contends, explain its enduring power. He concludes that modern Japan is imbued with a deeply rooted legacy of 'renovationism' or 'reform nationalism' that accounts for its streamlined state structures, guarded economic nationalism, and highly scrutinized relationship with the rest of the world. Highlighting the pluralism of identity among Japanese, this book will be an invaluable corrective to recent works that glibly proclaim the emergence of 'globalization, ' 'internationalization, ' and 'convergence.'

Distributed Database Management Systems Saeed K.

Rahimi, Frank S. Haug, 2015-02-13 This book addresses issues related to managing data across a distributed database system. It is unique because it covers traditional database theory and current research, explaining the difficulties in providing a unified user interface and global data dictionary. The book gives implementers guidance on hiding discrepancies across systems and creating the illusion of a single repository for users. It also includes three sample frameworks—implemented using J2SE with JMS, J2EE, and Microsoft .Net—that readers can use to learn how to implement a distributed database management system. IT and development groups and computer sciences/software engineering graduates will find this guide invaluable.

Core-log Integration Peter K. Harvey, M. A. Lovell, 1998 This volume addresses some of the problems of core-log integration encountered by scientists and engineers from both industry and academia. Core and log measurements provide crucial information about subsurface formations. Their usage, either for integration or calibration, is complicated by the different measurement methods employed, different volumes of formation analysed and, in turn, the heterogeneity of the formations. While the problems of comparing core and log data are only too well known, the way in which these data can be most efficiently combined is not at all clear in most cases. In recent years there has been increased interest in this problem, both in industry and academia, due to developments in technology which offer access to new types of information and, in the case of industry, pressure for improved reservoir models and hydrocarbon recovery. The application of new numerical methods for analysing and modelling core and log data, the availability of core scanning facilities, and novel core measurements in both two and three dimensions, currently provide a framework for the development of new and exciting approaches to core-log integration. The contributions within Core-Log Integration geologically range from hydrocarbon-bearing sediments in the North Sea to the volcanic rocks that form the upper part of the oceanic crust.

Globalizing Polar Science R. Launius, J. Fleming, D. DeVorkin, 2010-11-22 The International Polar Years and the International Geophysical Year represented a remarkable international

collaborative scientific effort that has been largely neglected by historians. This groundbreaking collection seeks to redress that neglect and illuminate critical aspects of the last 150 years of international scientific endeavour.

Mechanical Properties of Bamboo Jules J.A. Janssen, 2012-12-06 In this book I have collected many reports on the properties of bamboo. Since I started bamboo research in 1974, I have collected many publications on bamboo. However, in contacts with other researchers I became aware of the fact that several of these publications were unknown to them. Consequently their activities in research or in bamboo projects had to start at a lower level than if they had known some of these publications. Therefore, I discussed the need for a book like this with several colleagues, and I decided to start writing. In this book I present data on properties, as published by researchers. Certainly it is not complete; e.g. the proceedings of the bamboo workshop in Cochin in November 1988 are not included; they arrived just too late to be taken into account. On the other hand, in writing this preface I realize I have forgotten my own thesis. I do apologize to any colleague whose relevant report is not taken into account as well. I like to express my feelings of respect to the board of my faculty: they allowed me to spend so much time on this book, and they gave a considerable financial support for the printing costs.

Household Sustainability Chris Gibson, Carol Farbotko, Nicholas Gill, Lesley Head, Gordon Waitt, 2013-01-01 The question Chris Gibson and his colleagues answer in this book is simple: "Why is it not easy being green?" In 20 concise, focused and accessible chapters Ð from birthing to dying, from toilets to Christmas Ð they unveil the ambiguities, instabilities and paradoxes of affluent household living in the 21st century. In so doing, they temper the easy rhetoric of

sustainable lifestyles with some authentic realities drawn from the affluent world. Earth system science is showing us the deep complexity of our material planet. This book brilliantly reflects back to us the complex materiality of our cultural lives. Æ Mike Hulme, University of East Anglia, UK

Contrary to the common rhetoric that being green is ÔeasyÕ, household sustainability is rife with contradiction and uncertainty. Households attempting to respond to the challenge to become more sustainable in everyday life face dilemmas on a daily basis when trying to make sustainable decisions. Various aspects of life such as cars, computers, food, phones and even birth and death, may all provoke uncertainty regarding the most sustainable course of action. Drawing on international scientific and cultural research, as well as innovative ethnographies, this timely book probes these wide-ranging sustainability dilemmas, assessing the avenues open to households trying to improve their sustainability. The authors engage critically, and constructively, with the proposition that households are a key scale of action on climate change. They confront dilemmas of practice and circumstance, and cultural norms of lifestyle and consumerism that are linked to troublesome environmental problems Æ and question whether they can be easily unsettled. The work also illuminates the informal and often unheralded work by households Æ frequently the poorest Æ in reducing their environmental burden. This important book is critical to understanding both the barriers to household sustainability and the ÔunsungÕ sustainability work carried out by householders. Containing a unique combination of science and cultural research, this fascinating book will appeal to researchers and students of environmental science, environmental studies, sustainability studies, climate change adaptation, geography, sociology, cultural studies,

science and technology studies, as well as energy studies and housing research. Policy-makers in various levels of government working through sustainability problems, environmental educators, social planners and sustainability officers working for governments, will also find much to interest them in this unique book.

Fidalgos in the Far East 1550-1770 Charles Ralph Boxer, 1968

Kurosawa Mitsuhiro Yoshimoto, 2000 This work will become not only the newly definitive study of Kurosawa, but will redefine the field of Japanese cinema studies, particularly as the field exists in the west.

Automating Instructional Design: Computer-Based Development and Delivery Tools Robert D. Tennyson, Ann E. Barron, 2012-12-06
This institute was organized and presented by an international group of scholars interested in the advancement of instructional design automation through theory, research and applied evaluation. Members of the organizing committee included Dr. Klaus Breuer from disce (Germany), Dr. Jose J. Gonzalez from Agder College of Engineering (Norway), Dr. Begofia Gros from the University of Barcelona, Dr. J. Michael Spector from the Armstrong Laboratory (USA). Dr. Gonzalez, co-director of the institute, and the staff of Agder College were directly responsible for the preparation and operation of the institute in Grimstad, Norway. The institute was held on the campus of Agder College of Engineering, July 12-23, 1993. The theme of the institute extended the initial work developed by the presenters at a NATO Advanced Research Workshop held in Sitges, Spain in 1992. During the two week institute, 21 presentations were made including papers and demonstrations. In addition to the formal presentations, working groups and on-site study groups provided opportunities for the students to participate directly in program activities. An important

outcome for the working groups was the formal preparation of their efforts in chapters for this volume.
