Drawing Futures Bob Sheil,Frédéric Migayrou,Luke Pearson,Laura Allen,2016-11-11 Drawing Futures brings together international designers and artists for speculations in contemporary drawing for art and architecture.Despite numerous developments in technological manufacture and computational design that provide new grounds for designers, the act of drawing still plays a central role as a vehicle for speculation. There is a rich and long history of drawing tied to innovations in technology as well as to revolutions in our philosophical understanding of the world. In reflection of a society now underpinned by computational networks and interfaces allowing hitherto unprecedented views of the world, the changing status of the drawing and its representation as a political act demands a platform for reflection and innovation. Drawing Futures will present a compendium of projects, writings and interviews that critically reassess the act of drawing and where its future may lie.Drawing Futures focuses on the discussion of how the field of drawing may expand synchronously alongside technological and computational developments. The book coincides with an international conference of the same name, taking place at The Bartlett School of Architecture, UCL, in November 2016. Bringing together practitioners from many creative fields, the book discusses how drawing is changing in relation to new technologies for the production and dissemination of ideas.

Connecting Asia Michael G. Plummer, Peter J. Morgan, Ganeshan Wignaraja, 2016-01-29 This book analyses how closer regional connectivity and economic integration between South Asia and Southeast Asia can benefit both regions. With a focus on the role played by infrastructure and public policies in facilitating this process, it provides a detailed and up-to-date discussion of issues, innovations, and progress. Country studies of national connectivity issues and policies cover Bangladesh, India, Myanmar, Nepal, Sri Lanka, and Thailand, examining major developments in trade and investment, economic cooperation, the role of economic corridors, and regional cooperation initiatives. Thematic chapters explore investment in land and sea transport infrastructure, trade facilitation, infrastructure investment financing, supporting national and regional policies, and model-based estimates of the benefits of integration. They also identify significant opportunities for strengthening these integration efforts as a result of the recent opening up of Myanmar in political, economic, and financial terms. For the first time for these regions, the book employs a state-of-the-art computable general equilibrium (CGE) model incorporating heterogeneous firms to estimate the advantages of integration. Providing perspective on the latest thinking on integration policy, *Connecting Asia* is an essential resource for academics, policymakers, and business people alike.

However, the benefits of this system are available only to a handful of major powers and their allies. The three orbital elevators belong to three superpower blocs. These are the Union, led by the United States of America; the Human Reform League, led by China, Russia, and India; and the AEU, led by Europe. These superpower blocs continue to play a grand zero-sum game for the sake of their own prestige and prosperity. In this world of never-ending conflict, a private armed organization appears, dedicated to the elimination of war through armed force. Its name is Celestial Being, and it is in possession of Gundam mobile suits. With these Gundams, it begins armed intervention into all acts of war.

Transported to Another World Stephen Reysen, Courtney N. Plante, Daniel Chadborn, Sharon E. Roberts, Kathleen C. Gerbasi, 2021-04-19 Anime/manga (Japanese animation and comics) have been increasing in popularity worldwide for decades. But despite being a global phenomenon, there's been surprisingly little psychological research formally studying its devoted fanbase. In this book we aim to do just that with an overview of nearly a decade of research by fan psychologists. Otaku and cosplayers, genre preferences, hentai, parasocial connections, motivation,

personality, fandom and fanism, stigma, and well-being – this book looks at all of these topics through a psychological lens. Many of these findings are being presented for the first time, without the jargon and messy statistical analyses, but in plain language so it's accessible to all readers – fans and curious observers alike!

The Dragon and the Dazzle Marco Pellitteri, Jean-Marie Bouissou, Gianluca Di Fratta, Cristiano Martorella, Bounthavy Suvilay, 2010 In the worldwide circulation of the products of cultural industries, an important role is played by Japanese popular culture in European contexts. Marco Pellitteri shows that the contact between Japanese pop culture and European youth publics occurred during two phases. By use of metaphor, the author calls them the Dragon and the Dazzle. The first took place between 1975 and 1995, the second from 1996 to today. They can be distinguished by the modalities of circulation and consumption/re-elaboration of Japanese themes and products in the most receptive countries: Italy, France, Spain, Germany and, across the ocean, the United States. During these two phases, several themes have been perceived, in Europe, as rising from Japan's social and mediatic systems. Among them, this book examines the most apparent from a European point of view: the author names them machine, infant, and mutation, visible mostly through manga, anime, videogames, and toys. Together with France, Italy is the European country that in this respect has had the most central role. There, Japanese imagination has been acknowledged not only by young people, but also by politicians, television programmers, the general public, educators, comics and cartoons authors. The growing influence of Japanese pop culture, connected to the appreciation of its manga, anime, toys, and videogames, also urges political and mediologic questions linked to the identity/ies of Japan as they are understood--wrongly or rightly--in Europe and the West, and to the increasingly important role of Japan in international relations.--Back cover

50 Years of Solar System Exploration Linda Billings, 2020 To commemorate the 50th anniversary of the first successful planetary mission, Mariner 2 sent to Venus in 1962, the NASA History Program Office, the Division of Space History at the National Air and Space Museum, NASA's Science Mission Directorate, and the Jet Propulsion Laboratory organized a symposium. *Solar System Exploration @ 50* was held in Washington, D.C., on 25-26 October 2012. The purpose of this symposium was to consider, over the more than 50-year history of the Space Age, what we have learned about the other bodies of the solar system and the processes by which we have learned it. Symposium organizers asked authors to address broad topics relating to the history of solar system exploration such as various flight projects, the development of space science disciplines, the relationship between robotic exploration and human spaceflight, the development of instruments and methodologies for scientific exploration, as well as the development of theories about planetary science, solar system origins and implications for other worlds. The papers in this volume provide a richly textured picture of important developments - and some colorful characters - in a half century of solar system exploration. A comprehensive history of the first 50 years of solar system exploration would fill many volumes. What readers will find in this volume is a collection of interesting stories about money, politics, human resources, commitment, competition and cooperation, and the faster, better, cheaper era of solar system exploration--

General Intellects McKenzie Wark, 2017-05-16 A guide to the thinkers and the ideas that will shape the future What happened to the public intellectuals that used to challenge and inform us? Who is the Sartre or De Beauvoir of the internet age? General Intellects argues that we no longer have such singular figures, but we do have general intellects whose writing could, if read together, explain our times. Covering topics such as culture, politics, work, technology, and the Anthropocene, each chapter is a concise account of an individual thinker, providing useful context and connections to the work of the others. McKenzie Wark's distinctive readings are appreciations, but are also critical of how neoliberal universities militate against cooperative intellectual work to understand and change the world. The thinkers included are Amy Wendling, Kojin Karatani, Paolo Virno, Yann Moulier Boutang, Maurizio Lazzarato, Franco "Bifo" Berardi, Angela McRobbie, Paul Gilroy, Slavoj Žižek, Jodi Dean, Chantal Mouffe, Wendy Brown, Judith Butler, Azuma Hiroki, Paul B. Preciado, Wendy Chun, Timothy Morton, Quentin Meillassoux, Isabelle Stengers, and Donna Haraway.

Obiter Dicta Erick Verran, 2021-10-14 Stitched together over five years of journaling, *Obiter Dicta* is a commonplace book of freewheeling explorations representing the transcription of a dozen notebooks, since painstakingly reimagined for publication. Organized after Theodor Adorno's *Minima Moralia*, this unschooled exercise in aesthetic thought--gleefully dilettantish, oftentimes dangerously close to the epigrammatic--interrogates an array of subject matter (although inescapably circling back to the curiously resemblant histories of Western visual art and instrumental music) through the lens of drive-by speculation. Erick Verran's approach to philosophical inquiry follows the brute-force literary technique of Jacques Derrida to exhaustively favor the material grammar of a signifier over hand-me-down meaning, juxtaposing outer semblances with their buried systems and our etched-in-stone intuitions about color and illusion, shape and value, with lessons stolen from seemingly unrelatable disciplines. Interlarded with extracts of Ludwig Wittgenstein but also Wallace Stevens, Cormac McCarthy as well as Roland Barthes, this cache of incidental remarks eschews what's granular for the biggest picture available, leaving below the hyper-specialized fields of academia for a bird's-eye view of their crop circles. *Obiter Dicta* is an unapologetic experiment in intellectual dot-connecting that challenges much long-standing wisdom about everything from illuminated manuscripts to Minecraft and the evolution of European music with lyrical brevity; that is, before jumping to the next topic.

Talk to Me T.C. Boyle, 2021-09-14 From bestselling and award-winning author T.C. Boyle, a lively, thought-provoking novel that asks us what it would be like if we could really talk to the animals When animal behaviorist Guy Schermerhorn demonstrates on a TV game show that he has taught Sam, his juvenile chimp, to speak in sign language, Aimee Villard, an undergraduate at Guy's university, is so taken with the performance that she applies to become his assistant. A romantic and intellectual attachment soon morphs into an interspecies love triangle that pushes hard at the boundaries of consciousness and the question of what we know and how we know it. What if

it were possible to speak to the members of another species—to converse with them, not just give commands or coach them but to really have an exchange of ideas and a meeting of minds? Did apes have God? Did they have souls? Did they know about death and redemption? About prayer? The economy, rockets, space? Did they miss the jungle? Did they even know what the jungle was? Did they dream? Make wishes? Hope for the future? These are some the questions T.C. Boyle asks in his wide-ranging and hilarious new novel *Talk to Me*, exploring what it means to be human, to communicate with another, and to truly know another person—or animal...

The Space Elevator Bradley C. Edwards, Eric A. Westling, 2002 The authors take the reader through the history of the concept, technical design and economic practicalities of building an elevator to space, and, ultimately, the implications of what such a low cost transportation system would mean to society. They conclude by addressing the effects that the space elevator could have on mankind's future from communications and energy to colonizing space.
