Energiya-Buran Bart Hendrickx, Bert Vis, 2007-12-05 This absorbing book describes the long development of the Soviet space shuttle system, its infrastructure and the space agency's plans to follow up the first historic unmanned mission. The book includes comparisons with the American shuttle system and offers accounts of the Soviet test pilots chosen for training to fly the system, and the operational, political and engineering problems that finally sealed the fate of Buran and ultimately of NASA's Shuttle fleet.

The Central Intelligence Agency and Overhead Reconnaissance Gregory Pedlow, Donald Welzenbach, 2016-03-15 The CIA's 2013 release of its book *The Central Intelligence Agency and Overhead Reconnaissance 1954-1974* is a fascinating and important historical document. It contains a significant amount of newly declassified material with respect to the U-2 and Oxcart programs, including names of pilots; codenames and cryptonyms; locations, funding, and cover arrangements; electronic countermeasures equipment; cooperation with foreign governments; and overflights of the Soviet Union, Cuba, China, and other countries. Originally published with a Secret/No Foreign Dissemination classification, this detailed study describes not only the program's technological and bureaucratic aspects, but also its political and international context, including the difficult choices faced by President Eisenhower in authorizing overflights of the Soviet Union and the controversy surrounding the shoot down there of U-2 pilot Francis Gary Powers in 1960. The authors discuss the origins of the U-2, its top-secret testing, its specially designed high-altitude cameras and complex life-support systems, and even the possible use of poison capsules by its pilots, if captured. They call attention to the crucial importance of the U-2 in the gathering of strategic and tactical intelligence, as well as the controversies that the program unleashed. Finally, they discuss the CIA's development of a successor to the U-2, the Oxcart, which became the world's most technologically advanced aircraft. For the first time, the more complete 2013 release of this historical text is available in a professionally typeset format, supplemented with higher quality photographs that will bring alive these incredible aircraft and the story of their development and use by the CIA. This edition also includes a new preface by author Gregory W. Pedlow and a foreword by Chris Pocock. Skyhorse Publishing, as well as our Arcade imprint, are proud to publish a broad range of books for readers interested in history--books about World War II, the Third Reich, Hitler and his henchmen, the JFK assassination, conspiracies, the American Civil War, the American Revolution, gladiators, Vikings, ancient Rome, medieval times, the old West, and much more. While not every title we publish becomes a New York Times bestseller or a national bestseller, we are committed to books on subjects that are sometimes overlooked and to authors whose work might not otherwise find a home.

Myasishchev M-4 And 3M Yefim Gordon, Dmitriy Komissarov, 2021-07-28 When the Myasishchev design bureau was reborn in 1951, it was immediately tasked with creating a high-speed strategic bomber to balance the threat posed by NATO's heavy bombers, notably the B-52. Designated M-4 and code-named Bison by NATO, the new four-turbojet bomber was developed within an incredibly short time--just one year. It made use of many innovative features, including a bicycle landing gear, and was designed around the most powerful jet engine of the day. It became the progenitor of a small family of bombers and refueling tankers, including the much-improved 3M and its versions. Many of the intended versions never materialized, and the Bison had its share of problems, but it came at just the right time, providing a valuable nuclear deterrent, and remained in service for 40 years until retired in compliance with the START treaty. The book charts the first Soviet strategic jet bomber's development and operational history. It includes the story of how the 3M was adapted to carry components of the Energiya/Buran space transport system as the VM-T Atlant outsize cargo transporter.

Timelines of Nearly Everything Manjunath.R,2021-07-03 This book takes readers back and forth through time and makes the past accessible to all families, students and the general reader and is an unprecedented collection of a list of events in chronological order and a wealth of informative knowledge about the rise and fall of empires, major scientific breakthroughs, groundbreaking inventions, and monumental moments about everything that has ever happened.

Innovation in the United States Air Force Adam Grissom,Caitlin Lee,Karl P. Mueller,2016 Air Force senior leaders have asked whether the service is sufficiently innovative today and what can be done to make it more innovative for the future. This report assesses historical cases of Air Force innovation or apparent failure to innovate.

Soviet Secret Projects Tony Buttler,Yefim Gordon,2005 This is the latest among Midland's very successful 'Secret Projects' series. This, the second of three volumes covering Soviet secret aviation projects, is devoted to post-World War II fighters and will include designs from famous bureaus such as Lavochkin, Mikoyan, Sukhoi, Yakovlev, Myasishchev, and Tupolev. The book covers early post-war fighters, competitions for the first-generation supersonic designs (MiG-21 and Su-7/-9), advanced designs of the 1960s which led to the MiG-2 and competitions to build the specifications which resulted in the MiG-29, Su-27, and MiG I-44. A number of previously unpublished Yakovlev designs from the late 1950s and early 1960s form a separate chapter, followed by another covering Yakovlev's VSTOL work. The book also describes the competition between design bureaus for orders and shows the progress made in aircraft design behind the Iron Curtain. It will give both experts and enthusiasts the chance to compare this work to Western aircraft programs of the era.

The Petlyakov Pe-2 Peter C Smith,2020-03-30 During the Second World War, the Soviet Union's Petlyakov Pe-2 _Peshka_ dive-bomber was unique in that it was as fast as most fighter aircraft. This was in a period when it was considered by the RAF that it was impossible for monoplane aircraft to conduct vertical bombing with any degree of success. During the war the Pe-2 was the principal dive- and light-bomber of Russia's air power across the vast Eastern Front and it continued in service until the early 1950s with the air forces of the Warsaw Pact countries and Yugoslavia. Conceived by a team of top aircraft designers whom Stalin had incarcerated in a prison camp on trumped-up political charges, the Pe-2 had originally been designed as a high-altitude twin-engine fighter plane, but, due to the outstanding success of the German Stukas in the Blitzkrieg, its role was quickly changed to that of a fast dive-bomber. The Pe-2 arrived in service around the time of the German attack on its hitherto ally. Although only a handful had reached front line units by the start of Operation Barbarossa in June 1941, the Pe-2 soon became the main dive-bomber in both the Soviet VVS and Naval service. Mass production, by factories hastily moved back beyond the front, meant that numbers increased rapidly, and more than 11,000 of the type, including many variants, were built up to 1945. The Peshka became the mainstay of the Soviet counteroffensive that ultimately resulted in the fall of Berlin. Pe-2s also led the way in the brief but annihilating Manchurian campaign against Japan in the closing days of the war in 1945. Using official sources, including the official Pe-2 handbook, and numerous color and black-and-white photographs made available to the author from both official and private sources and collections, this book is the definitive record of the Pe-2 - the dive-bomber supreme!

Sukhoi Su-57-Op/HS Yefim Gordon,Dmitriy Komissarov,2021 As early as 1979, Soviet aircraft designers started work on a program called I-90, a fighter for the 1990s. Two Soviet aircraft design bureaus took on the task, Mikoyan and Sukhoi. Work began in 1983 but with the dissolution of the Soviet Union the project stalled. In 2002 the Russian government kicked off a new program under which Sukhoi began development of what was then known as PAK FA (Future Tactical Aviation Aircraft System). Known in house as the T-50, this aircraft strongly resembled the

American F-22 Raptor in overall appearance. The first prototype took to the air on January 29, 2010 and in 2017 the fighter was allocated the service designation Su-57. In 2018 the aircraft had its combat debut when four of the prototypes were briefly deployed to Syria during the Russian campaign against the IS terror network in that country. Production was officially launched in May 2019, with the Russian Air Force having 70-plus on order. This work charts the development and trials history of the 1.44, Su-47 and Su-57, as well as other project versions that did not make it to the hardware stage. It is illustrated with numerous previously unpublished photos and drawings.

Historical Dictionary of Air Intelligence Glenmore S. Trenear-Harvey, 2009-04-13 From the moment man learned how to ascend off the ground, the strategic significance of air intelligence became apparent. This relatively new discipline_the first dedicated air reconnaissance missions were undertaken in 1870 during the siege of Paris when tethered French balloons were employed to spot enemy positions and direct artillery fire onto them_has developed at an astonishing speed. Over the past century air intelligence has moved from hazardous observation balloons to micro-circuitry, which can send pictures from a video camera mounted on a remotely-controlled vehicle the size of a hummingbird. The Historical Dictionary of Air Intelligence relates the evolving history of the rapidly advancing field of air intelligence. A chronology, an introductory essay, and cross-referenced dictionary entries on the agencies, agents, operations, equipment, tradecraft, and jargon of air intelligence make this reference as essential as it is fascinating.

Challenge to Apollo Asif A. Siddiqi, NASA History Office, 2011-03-01 Taking advantage of the Soviet archives, which were opened in the 1990s, Siddiqi has written a groundbreaking work that examines why the Soviet Union fell behind in the space race of the 1960s after changing the course of human history with the first artificial satellite launch, Sputnik, in 1957.

Soviet Air Power, 1917-1976 Kenneth R. Whiting, 1976

Chinese Air Power Yefim Gordon, Dmitriy Komissarov, 2021-05-04 By the turn of the century China had reaffirmed its position as one of the world's leading military powers. With much importance attached to fleet renewal; the People's Liberation Army Air Force (PLAAF) and the Naval Aviation are fielding new types, emphasis shifting from local derivatives of Russian or western types to indigenously developed aircraft and helicopters. The book focuses on the current PLAAF/PLANAF order of battle and describes the most advanced aircraft types currently in service or due to enter service. Among the many aircraft reviewed in this volume are the Chengdu J-10 single-engine fourth-generation fighter in service since 2003, fifth-generation fighters like the twin-engine, tail-first Chengdu J-20, and the smaller Shenyang J-31 fifth-generation light fighter. Deliveries of Xian H-6K missile carriers, the Chinese version of the Tupolev Tu-16 bomber, are continuing, the H-6N with inflight refueling capability, entering service in 2019. Transport aviation is not forgotten either. China has also been building an aircraft carrier fleet equipped with the Shenyang J-15 Flying Shark shipboard fighter derived from the Sukhoi Su-33. The latest addition to the Chinese Army Aviation's arsenal is the Harbin Z-20 medium utility helicopter which looks like the Sikorsky S-70 Black Hawk. Numbers of the CAIC Z-10 attack helicopter and the lighter Harbin Z-19 attack helicopter are also now operational. Unmanned aerial vehicles are also reviewed in this comprehensive survey.

75 years of the Lockheed Martin Skunk Works James C. Goodall, 2021-05-13 The Lockheed Martin Skunk Works was founded in the summer of 1943 to develop a jet-powered high-altitude interceptor for the USAAF, and ever since it has been at the forefront of technological development in the world of aviation. From the XP-80 to the U-2, SR-71,

F-117, F-22 and now the F-35, the Skunk Works team has designed aircraft that are the pinnacle of innovation and performance. 75 years of the Lockheed Martin Skunk Works takes us through the history of this legendary facility from its foundation at the height of World War II under the talented engineer, Clarence "Kelly" Johnson, through to the present day. Illustrated with over a thousand photographs and drawings, it details the 46 unclassified programmes developed by the Skunk Works, following them through prototype build-up, first flight and, if they reached the frontline, operational service.

History of Strategic Air and Ballistic Missile Defense: 1945-1955 ,2009 From the book's Foreword: In the early 1970s, the U.S. Army Center of Military History contracted with BDM Corporation for a history of U.S. efforts to counter Soviet air and missile threats during the Cold War. The resulting two-volume History of Strategic Air and Ballistic Missile Defense covers the years 1945-1972 when the strategic arms competition between the United States and the Soviet Union was at its height. The study was first published for limited distribution in 1975 and recently declassified with minimal redaction. These volumes address the passive and active defense strategies, technologies, and techniques adopted by both U.S. and Soviet defense planners. Much of their actions centered around three common questions: How might we be attacked? How shall we defend our country? What can technology do to solve the basic problems of defending against this new intercontinental threat?

Luftwaffe Special Weapons 1942-45 Robert Forsyth,2021-06-10 As the course of World War II turned against the Third Reich after Stalingrad some of the most inventive and radical proposals, and designs, were put forward by armaments manufacturers, scientists and technicians, aircrew and even private individuals to the Reichsluftministerium (German Air Ministry) for consideration. Some proposals were destined never to leave the drawing board, while others not only underwent trials but were issued to operational units and used in action. In this fascinating new book, leading Luftwaffe historian Robert Forsyth examines the many different types of weapons that comprised the Luftwaffe's increasingly potent arsenal during the second half of the war. This was the period that saw the development and adoption of aerial torpedoes, wire-guided rockets and missiles, batteries fired by photo-electric cells, chemical weapons, composite bombers and air-launched flying bombs.

Mikoyan MiG-31: Famous Russian Aircraft Yefim Gordon,Dmitriy Komissarov,2020 As early as 1965, when the MiG-25 interceptor was in the midst of its test program, the Mikoyan Design Bureau started work on an even more capable two-seat interceptor meant to provide adequate protection for the huge expanses of Siberia and the Soviet Far East. Though superficially resembling a MiG-25 with tandem cockpits, the aircraft was soon designated the MiG-31. Initially dubbed Super Foxbat in the West but soon renamed Foxhound, the MiG-31 first flew on 16 September 1975 and, after a five-year trials program, achieved initial operational capability in 1980. Full-scale deliveries began in 1982 to units covering the Moscow Air Defense Zone, the Arctic and the Far East. One of the effects was that the SR-71s now stayed away from the Soviet borders. Efforts to improve the Foxhound began right away. In-flight refueling capability was added in 1989 to overcome the problem of inadequate range. Next, the MiG-31B, featuring upgraded avionics and better weapons, entered production in 1990; existing MiG-31s were brought up to the new standard (except for IFR capability) as the MiG-31BS. The radically improved 'Generation 4+' MiG-31M featuring a new WCS and new R-37 ultra-long-range AAMs first flew in 1985 but never entered production because of funding shortages. Today, the MiG-31s remains one of modern Russia's key air defense assets, and new versions keep appearing. The book gives the complete development and service history of this remarkable aircraft and is richly illustrated with color photos and color artwork throughout.
