Soviet Strategic Bombers Jason Nicholas Moore, 2018-06-30 The history of Soviet strategic bombers after the Second World War is a fascinating one: from the reverse-engineering of interned American Boeing B-29 bombers into the first Soviet strategic bomber, the Tu-4; to the huge jet and turbo-prop powered aircraft of today's Russian Air Force. This comprehensive history of these aircraft will deal not just with the development of aircraft that entered service, but of experimental aircraft as well, and projects that were never even built will also be explored. The service life of these bombers will be covered, including both active and retired aircraft, and their use outside of the Soviet Union, in places such as the Middle East and Afghanistan, will be described in detail. The Soviet Union built some of the first jet-powered strategic bombers, and the Tu-95 Bear, the only swept-winged turbo-prop bomber to ever enter service, remains in service to this day. Less successful aircraft, like the graceful but problem-plagued supersonic Tu-22 Blinder, and the Mach 3 Sukhoi T-4 will also be examined.

*Myasishchev M-4 And 3M* Yefim Gordon, Dmitriy Komissarov, 2021-07-28 When the Myasishchev design bureau was reborn in 1951, it was immediately tasked with creating a high-speed strategic bomber to balance the threat posed by NATO's heavy bombers, notably the B-52. Designated M-4 and code-named Bison by NATO, the new four-turbojet bomber was developed within an incredibly short time--just one year. It made use of many innovative features, including a bicycle landing gear, and was designed around the most powerful jet engine of the day. It became the progenitor of a small family of bombers and refueling tankers, including the much-improved 3M and its versions. Many of the intended versions never materialized, and the Bison had its share of problems, but it came at just the right time, providing a valuable nuclear deterrent, and remained in service for 40 years until retired in compliance with the START treaty. The book charts the first Soviet strategic jet bomber's development and operational history. It includes the story of how the 3M was adapted to carry components of the Energiya/Buran space transport system as the VM-T Atlant outsize cargo transporter.

*Myasishchev M-4 and 3M* Yefim Gordon, 2003 8 1/2 x 11, 16 pgs of color photos plus color side views 200 b&w photos This is the story of the Soviet Union's first intercontinental jet bomber which was to have become a carrier of nuclear missiles and the Soviet answer to the Boeing B-52. Much to the surprise of many, the little-known Myasishchev bureau was chosen to do the job; it had been disbanded a few years earlier and reinstated solely to create such a bomber. Known to the West as the Bison, the new bomber employed many innovative features (including a bicycle landing gear) and was created within the short period of just one year; Western military observers were stunned when the aircraft was formally unveiled at the 1953 May Day parade. The M-4 and the much-improved 3M remained in service for 40 years until retired and scrapped in compliance with the START treaty. The Bison also served as the basis for the VM-T Atlant specialized cargo aircraft designed to piggy-back the Buran space shuttle and components of the Energiya launch rocket. Also described are the many projected derivatives of the M-4 designed in the 1950s, including long-range airliners. This book, written by a Russian author using material from original Russian archives, includes more than 200 photos, most of which have not been seen in the West.

**Tupolev Tu-16 Badger** Yefim Gordon, Vladimir Rigmant, 2004-06-21 The establishment of NATO posed the need for the Soviet war machine to create a fast jet bomber capable of reaching targets throughout Western Europe and combatting the carrier task forces with which the US Navy could throw its weight around the world. The basic Tu-16 which first flew in the mid-1950s was developed into nearly 50 versions adopted for various roles, including nuclear-capable bombers, anti-shipping missile strike aircraft, torpedo-bombers and minelayers, numerous reconnaissance and ECM variants, assorted development aircraft for testing new engines, avionics and systems. The Tu-16 even found civil uses as a fast mailplane and a weather research/rainmaking aircraft! The Badger, as the bomber was known to the West, served as the basis for the Soviet Union's first jet airliner, the Tu-104. The nearly 1,500 Tu-16s built in the Soviet Union were an important factor in preventing all-out military confrontation between the East and the West.

Since the mid-1950s and until the 1980s the Badger has been a regular picture on the pages of the Western press, snooping around Western naval groups every now and then. The type also had its share of 'hot' wars, getting its baptism of fire in the Six-Day War of 1967. Apart from three factories in the USSR, the Tu-16 was built under license in China as the H-6 and remains in service with the People's Liberation Army Air Force. Other foreign users were Egypt, Indonesia and Iraq. All known versions are described and a full account is given of the Tu-16's operational career in the USSR and abroad during the Cold War and in the days after that when many of the surviving Badgers were used as target drones. The book features many previously unpublished photos and a detailed production list.

*Aircraft Design* Daniel P. Raymer, 2006 Winner of the Summerfield Book Award Winner of the Aviation-Space Writers Association Award of Excellence. --Over 30,000 copies sold, consistently the top-selling AIAA textbook title This highly regarded textbook presents the entire process of aircraft conceptual design from requirements definition to initial sizing, configuration layout, analysis, sizing, and trade studies in the same manner seen in industry aircraft design groups. Interesting and easy to read, the book has more than 800 pages of design methods, illustrations, tips, explanations, and equations, and extensive appendices with key data essential to design. It is the required design text at numerous universities around the world, and is a favorite of practicing design engineers.

*Hypersonics, Ramjets and Missiles* Chris Gibson, Tony Buttler, 2007 The fourth volume in the British Secret Projects series shows how the hopes of the time failed to see fulfillment. Following a scene-setting introduction, chapters will deal with test vehicles and guided weapons. This includes those developed for air defense, ballistic missile defense, anti-tank weapons, anti-ship ordnance, and stand-off weapons.

**The Avro Arrow** Palmiro Campagna, 2024-02-06 "No one has done more than Palmiro Campagna to document the story of Canada's extraordinary Avro Arrow ... This latest work sheds new light on the Arrow's fascinating saga." — ANDREW CHAIKIN, author of *A Man on the Moon* An expanded edition of the bestselling book, including newly discovered American records that shed further light on the disastrous cancellation of the Avro Arrow. The controversial cancellation of the Avro Arrow — an extraordinary achievement of Canadian military aviation — continues to inspire debate today. When the program was scrapped in 1959, all completed aircraft and those awaiting assembly were destroyed, along with tooling and technical information. Was abandoning the program the right decision? Did Canada lose more than it gained? Brimming with information to fill the gaps in the Arrow's troubled history, this new edition also brings to light recently discovered documents that answer whether the United States government wished Canada to continue the development of what was considered the world's most advanced interceptor aircraft.

**Sabres Over MiG Alley** Kenneth P Werrell, 2013-06-11 This is the story of the first jet versus jet war, the largest in number of victories and losses, and one of the few military bright spots in the Korean War. It tells how an outnumbered force of F-86 Sabres limited by range and restricted by the rules of engagement, decisively defeated its foe. Based on the latest scholarship, author Kenneth Werrell uses previously untapped sources and interviews with sixty former F-86 pilots to explore new aspects of the subject and shed light on controversies previously neglected. For example, he found much greater violation of the Yalu River than thus far has appeared in the published materials. The F-86 became a legend in *The Forgotten War* because of its performance and beauty, but most of all, because of its record in combat.

*Instrument Flying Training*, 1942

Tupolev Tu-16 Yefim Gordon, Dmitriy Komissarov, Vladimir Rigmant, 2017-10-17 Developed to meet a Soviet Ministry of Defense requirement for a fast bomber that would counter the threat posed by NATO, the Tu-16 was a ground-breaking project. It was the first Soviet medium bomber to feature swept wings, and it was built around a pair of turbojets that were the world's most powerful jet engines at the time. First flown in 1952, the Tu-16 filled

such roles as nuclear bomb delivery, missile strike, reconnaissance, and Electronic Counter Measures. It also served as the basis for the first Soviet jet airliner, the Tu-104. Nearly 1,500 were built for the Soviet Air Force and the Soviet Navy, and the Tu-16 showed remarkable longevity, the final examples being retired in 1993. The type saw quite a bit of combat--from the Six-Days War of 1967 to the Afghan War. The Tu-16 was also produced in China and remains in Chinese service to this day. All known versions are described, as is the Tu-16's operational career. The book features many hitherto unpublished photos.

**Light This Candle** Neal Thompson, 2007-12-18 The definitive biography of Alan Shepard, America's first man in space, with a new Foreword by Chris Kraft "One of the finest books ever written about the space program."—Homer Hickman, author of *Rocket Boys* "A wonderful and gripping biography . . . meticulously reported in the best tradition of David Halberstam."—Buzz Bissinger, New York Times bestselling author of *Friday Night Lights* Alan Shepard was the brashest, cockiest, and most flamboyant of America's original Mercury Seven, but he was also regarded as the best. Intense, colorful, and dramatic, he was among the most private of America's public figures and, until his death in 1998, he guarded the story of his life zealously. *Light This Candle*, based on Neal Thompson's exclusive access to private papers and interviews with Shepard's family and closest friends—including John Glenn, Wally Schirra, and Gordon Cooper—offers a riveting, action-packed account of Shepard's life.

Aircraft Landing Gear Design Norman S. Currey, 1988 This is the only book available today that covers military and commercial aircraft landing gear design. It is a comprehensive text that will lead students and engineers from the initial concepts of landing gear design through final detail design. The book provides a vital link in landing gear design technology from historical practices to modern design trends, and it considers the necessary airfield interface with landing gear design. The text is backed up by calculations, specifications, references, working examples.

*British Secret Projects* Tony Buttler, 2000 A large number of fighter projects have been drawn by British companies over the last fifty years, but very few have turned into hardware, and very little has been published about these fascinating might-have-beens. This book makes extensive use of previously unpublished, primary-source material—much recently declassified. It gives an insight into a secret world where the public has had little idea of what was going on, while at the same time presenting a coherent nationwide picture of fighter development and evolution. Particular emphasis is placed on tender design competitions and some of the events that led to certain aircraft either being canceled or produced. Some of the many and varied types included are the Hawker P.1103/P.1136/P.1121 series, and the Fairey Delta III. The book includes many illustrations, plus specially commissioned renditions of might-have-been types in contemporary markings.

**Aircraft Engine Design** Jack D. Mattingly, 2002 Annotation A design textbook attempting to bridge the gap between traditional academic textbooks, which emphasize individual concepts and principles; and design handbooks, which provide collections of known solutions. The airbreathing gas turbine engine is the example used to teach principles and methods. The first edition appeared in 1987. The disk contains supplemental material. Annotation c. Book News, Inc., Portland, OR (booknews.com).

*Basic Helicopter Aerodynamics* John M. Seddon, Simon Newman, 2011-06-09 Basic Helicopter Aerodynamics is widely appreciated as an easily accessible, rounded introduction to the first principles of the aerodynamics of helicopter flight. Simon Newman has brought this third edition completely

up to date with a full new set of illustrations and imagery. An accompanying website [www.wiley.com/go/seddon](http://www.wiley.com/go/seddon) contains all the calculation files used in the book, problems, solutions, PPT slides and supporting MATLAB® code. Simon Newman addresses the unique considerations applicable to rotor UAVs and MAVs, and coverage of blade dynamics is expanded to include both flapping, lagging and ground resonance. New material is included on blade tip design, flow characteristics surrounding the rotor in forward flight, tail rotors, brown-out, blade sailing and shipborne operations. Concentrating on the well-known Sikorsky configuration of single main rotor with tail rotor, early chapters deal with the aerodynamics of the rotor in hover, vertical flight, forward flight and climb. Analysis of these motions is developed to the stage of obtaining the principal results for thrust, power and associated quantities. Later chapters turn to the characteristics of the overall helicopter, its performance, stability and control, and the important field of aerodynamic research is discussed, with some reference also to aerodynamic design practice. This introductory level treatment to the aerodynamics of helicopter flight will appeal to aircraft design engineers and undergraduate and graduate students in aircraft design, as well as practising engineers looking for an introduction to or refresher course on the subject.
