Duy Nguyen

Origami Myths & Legends Duy Nguyen, 2005 The fantastic creatures in this beautiful and colorful collection may exist only in storybooks-but with some paper, simple origami folds, and Duy Nguyen's incredibly detailed illustrations as a guide, they can spring to life right in your hands. Some come from Greek mythology: the mysterious Sphinx; Cerberus, the fierce dog that guards the underworld; and Medusa, with her snaky locks and deadly looks. Others, including Shiva Nataraja, have their origins in Indian legend. Magical fairy tale characters, such as a mermaid, unicorn, and dragon, populate the pages, too. All the basic folds and symbols needed for the origami figures appear right up front, fully diagrammed and easy to follow.

The Lady Or the Tiger? Raymond M. Smullyan, 2009-01-01

Another scintillating collection of brilliant problems and paradoxes by the most entertaining logician and set theorist who ever lived. — Martin Gardner. Inspired by the classic tale of a prisoner's dilemma, these whimsically themed challenges involve paradoxes about probability, time, and change; metapuzzles; and self-referentiality. Nineteen chapters advance in difficulty from relatively simple to highly complex.

From China to Paris Yvonne Dold-Samplonius, 2002 The reports of a conference of 11 scholars who began the task of examining together primary sources that might shed some light on exactly how and in what forms mathematical problems, concepts, and techniques may have been transmitted between various civilizations, from antiquity down to the European Renaissance following more or less the legendary silk routes between China and Western Europe.

Serious Fun with Flexagons L.P. Pook, 2009-08-04 A

flexagon is a motion structure that has the appearance of a ring of hinged polygons. It can be flexed to display different pairs of faces,

usually in cyclic order. Flexagons can be appreciated as toys or puzzles, as a recreational mathematics topic, and as the subject of serious mathematical study. Workable paper models of flexagons are easy to make and entertaining to manipulate. The mathematics of flexagons is complex, and how a flexagon works is not immediately obvious on examination of a paper model. Recent geometric analysis, included in the book, has improved theoretical understanding of flexagons, especially relationships between different types. This profusely illustrated book is arranged in a logical order appropriate for a textbook on the geometry of flexagons. It is written so that it can be enjoyed at both the recreational mathematics level, and at the serious mathematics level. The only prerequisite is some knowledge of elementary geometry, including properties of polygons. A feature of the book is a compendium of over 100 nets for making paper models of some of the more interesting flexagons, chosen to complement the text. These are accurately drawn and reproduced at half full size. Many of the nets have not previously been published. Instructions for assembling and manipulating the flexagons are included.

Sit and Solve Cross Number Puzzles Henry Hook, 2006-03 Love numbers? Then this one's for you. It offers wildly challenging, brain-busting math puzzles that really test your arithmetic logic. Like a regular crossword, it features a grid that you have to fill in by solving clues. But here, one clue may refer you to another one, which you'll then have to figure out first to go further. For example, the solution for 21 Down might be: 34 Down Septupled. You'll then have to go to 34 Down to see what it says. Nothing's obvious, so you'll have to think hard and do some smart calculations. In case you need a little help, there are starting hints" that give you a few answers to get you going.

Flexagons Inside Out Les Pook, 2003 Flexagons are hinged polygons that have the intriguing property of displaying different pairs of faces when they are flexed. Workable paper models of

flexagons are easy to make and entertaining to manipulate. Flexagons have a surprisingly complex mathematical structure and just how a flexagon works is not obvious on casual examination of a paper model. Flexagons may be appreciated at three different levels. Firstly as toys or puzzles, secondly as a recreational mathematics topic and finally as the subject of serious mathematical study. This book is written for anyone interested in puzzles or recreational maths. No previous knowledge of flexagons is assumed, and the only pre-requisite is some knowledge of elementary geometry. An attractive feature of the book is a collection of nets, with assembly instructions, for a wide range of paper models of flexagons. These are printed full size and laid out so they can be photocopied.

Shifting Gravity Ute Meta Bauer, Hanru Hou, 2013 The rise in biennials worldwide over the past three decades--and most notably in Asia--provokes a shift away from the traditional centers of contemporary art and signifies a new cultural phenomenon that changes the way we understand the relationship between artistic creation, institutions, localities, and social relations. Biennials provide a platform for presenting contemporary art from the world over to a traveling group of art professionals, but more importantly to a wide public. Initiated by the Biennial Foundation and hosted by the Gwangju Biennale Foundation in South Korea, the inaugural World Biennial Forum investigated this multiplicity of new centers and gravities along with the heterogeneous practices in large-scale art shows today. This publication collects the presentations and discussions developed during the forum. Keynotes by eminent intellectuals on democracy, aesthetic representation, and cosmopolitanism help us conceive of biennials as an alternative space of political imagination. Case studies with a focus on Asia examine innovative and contextually relevant models of presentations of this kind in the Asia Pacific region. The contributions look back to the history of biennials, or investigate contemporary art's relationship with other disciplines. Biennials featured (selection): Anyang Public Art Project, Biennale of Sydney, Chobi Mela, Emergency Biennale, Istanbul Biennial, Mediacity Seoul, Shanghai Biennale, Taipei Biennial, Tbilisi Triennial, Yokohama Triennial
