**A New Direction for China's Defense Industry** Evan S. Medeiros, Roger Cliff, Keith Crane, James C. Mulvenon, 2005-12-19 Since the early 1980s, a prominent and consistent conclusion drawn from research on China's defense-industrial complex has been that China's defense-production capabilities are rife with weaknesses and limitations. This study argues for an alternative approach: From the vantage point of 2005, it is time to shift the focus of current research to the gradual improvements in and the future potential of China's defense-industrial complex. The study found that China's defense sectors are designing and producing a wide range of increasingly advanced weapons that, in the short term, are relevant to a possible conflict over Taiwan but also to China's long-term military presence in Asia. Part of a larger RAND Project AIR FORCE study on Chinese military modernization, this study examines the current and future capabilities of China's defense industry. The goals of this study are to 1.

**The Chinese Air Force** Richard P. Hallion, Roger Cliff, Phillip C. Saunders, Center for the Study of Chinese Military Affairs (National Defense University), 2012-10-03 Presents revised and edited papers from a October 2010 conference held in Taipei on the Chinese Air Force. The conference was jointly organized by Taiwan's Council for Advanced Policy Studies, the Carnegie Endowment for International Peace, the U.S. National Defense University, and the RAND Corporation. This book offers a complete picture of where the Chinese air force is today, where it has come from, and most importantly, where it is headed.

**An Introduction to Categorical Data Analysis** Alan Agresti, 2018-10-11 A valuable new edition of a standard reference The use of statistical methods for categorical data has increased dramatically, particularly for applications in the biomedical and social sciences. An Introduction to Categorical Data Analysis, Third Edition summarizes these methods and shows readers how to use them using software. Readers will find a unified generalized linear models approach that connects logistic regression and loglinear models for discrete data with normal regression for continuous data. Adding to the value in the new edition is: • Illustrations of the use of R software to perform all the analyses in the book • A new chapter on alternative methods for categorical data, including smoothing and regularization methods (such as the lasso), classification methods such as linear discriminant analysis and classification trees, and cluster analysis • New sections in many chapters introducing the Bayesian approach for the methods of that chapter • More than 70 analyses of data sets to illustrate application of the methods, and about 200 exercises, many containing other data sets • An appendix showing how to use SAS, Stata, and SPSS, and an appendix with short solutions to most odd-numbered exercises Written in an applied, nontechnical style, this book illustrates the methods using a wide variety of real data, including medical clinical trials, environmental questions, drug use by teenagers, horseshoe crab mating, basketball shooting, correlates of happiness, and much more. An Introduction to Categorical Data Analysis, Third Edition is an invaluable tool for statisticians and biostatisticians as well as methodologists in the social and behavioral sciences, medicine and public health, marketing, education, and the biological and agricultural sciences.

**Buy, Build, Or Steal** Phillip Charles Saunders, Joshua K. Wiseman, 2011 This study identifies potential aviation technology development and procurement strategies, presents a general model of the options available to developing countries, and applies that model to explain Chinese procurement and aviation technology acquisition efforts over the last 60 years. The model articulates three main technology procurement avenues: purchase (buy), indigenous development (build), and espionage (steal), and three subavenues: reverse engineering (combining buy/steal and build), coproduction (combining buy and build), and codevelopment (combining buy and build, with an emphasis on build). It examines the costs, benefits, and tradeoffs inherent in each approach. Four variables influence decisions about the mix of strategies: (1) a country's overall level of economic development, in particular the state of its technical/industrial base; (2) the technological capacity of a country's military aviation sector; (3) the willingness of foreign countries to sell advanced military aircraft, key components, armaments, and related production technology; and (4) the country's bargaining power vis-à-vis potential suppliers.

**Visual Aircraft Recognition** U. S. Army, 2013-01-14 This manual is primarily a ready reference to assist the ground observer in aircraft recognition and identification. It provides information on current operational aircraft of the United States and foreign countries, which may be observed worldwide in the combat area. It can be used as source material for personnel conducting unit training in visual aircraft recognition. The procedures in this publication apply throughout the US Army. The data is based on the best information available at the time of publication; however, it is not all-inclusive because of some classification guidelines. This publication, by nature, has a built-in time lag, and some aircraft may still be under development or classified at the time of writing, but may be fielded or unclassified at, or after, publication.

**The United States and China in Power Transition** David Lai, Strategic Studies Institute, 2019-07-24 The most profound change that the United States and China have experienced in their relations over the past 30 years is perhaps the onset of an apparent power transition between the two nations. This potentially titanic change was set in motion as a result of China's genuine and phenomenal economic development, and the impact of this economic success on the

United States and the U.S.-led international system has been growing steadily. This perceived power transition process will continue to be a defining factor in U.S.-China relations for the next 30 years. As China's economic, political, cultural, and military influence continue to grow globally, what kind of a global power will China become? What kind of a relationship will evolve between China and the United States? How will the United States maintain its leadership in world affairs and develop a working relationship with China so that China can join hands with the United States to shape the world in constructive ways? In this book, Dr. David Lai offers an engaging discussion of these questions and others. His analysis addresses issues that trouble U.S. as well as Chinese leaders. Dr. Lai has taken painstaking care to put the conflicting positions in perspective, most notably presenting the origins of the conflicts, highlighting the conflicting parties' key opposing positions (by citing their primary or original sources), and pointing out the stalemates.

*Shaking the Heavens and Splitting the Earth* Roger Cliff, 2011 Less than a decade ago, China's air force was an antiquated service equipped almost exclusively with weapons based on 1950s-era Soviet designs and operated by personnel with questionable training according to outdated employment concepts. Today, the People's Liberation Army Air Force (PLAAF) appears to be on its way to becoming a modern, highly capable air force for the 21st century. This monograph analyzes publications of the Chinese military, previously published Western analyses of China's air force, and information available in published sources about current and future capabilities of the PLAAF. It describes the concepts for employing forces that the PLAAF is likely to implement in the future, analyzes how those concepts might be realized in a conflict over Taiwan, assesses the implications of China implementing these concepts, and provides recommendations about actions that should be taken in response.

**The People's Liberation Army and Contingency Planning in China** Arthur S. Ding, Phillip C. Saunders, Scott W. Harold, 2019-02-17 All militaries have a responsibility to plan for contingencies, and China's military, the People's Liberation Army (PLA), is no exception. PLA contingency planning takes place primarily within the General Staff Department's (GSD's) First Department, also known as the GSD Operations Department. China's seven military regions participate in drafting and reviewing the plans relevant to their areas of responsibility, albeit under heavy supervision from the GSD. U.S. joint doctrine defines a contingency as a situation that likely would involve military forces in response to natural and manmade disasters, terrorists, subversives, military operations by foreign powers, or other situations. U.S. doctrine distinguishes between deliberate planning (advance preparation of campaign and contingency plans in non-crisis situations) and crisis action planning (rapid planning in response to a developing incident or situation). Deliberate planning is typically used to develop campaign and contingency plans for a broad range of activities based on requirements identified in strategic guidance for military commanders. Crisis action planning is conducted with less advance warning (hours, days, or up to 12 months) and focuses on developing alternative courses of action or refining existing campaign or contingency plans to adapt to current circumstances. Why publish a book you can download for free? We print this book so you don't have to. Some documents are only available in electronic format. The print versions may be 6 inch by 9 inch (or smaller) so they are difficult to read. We print books a full 8 1/2 inches by 11 inches with large text and wide margins so you can jot down notes. Some documents found on the web are missing some pages or the image quality is so poor, they are difficult to read. If you find a good copy, you could print it using a network printer you share with 100 other people (typically its either out of

paper or toner). If it's just a 10-page document, no problem, but if it's 250-pages, you will need to punch 3 holes in all those pages and put it in a 3-ring binder. Takes at least an hour. It's much more cost-effective to just order the latest version from Amazon.com This book includes original commentary which is copyright material. Note that government documents are in the public domain. We print these large documents as a service so you don't have to. The books are compact, tightly-bound, full-size (8 1/2 by 11 inches), with large text and glossy covers. We publish short-run books (limited numbers) so they are not the least expensive available. However, we strive to issue a high-quality product with large text that is clear and crisp. Of course, color printing is expensive, so we pass that cost along to the customer. 4th Watch Publishing is a Service Disabled Veteran Owned Small Business (SDVOSB) located in a HUBZONE. **China's Air Force Enters the 21st Century** Kenneth W. Allen, Glenn Krumel, Jonathan D. Pollack, 1995 The authors maintain that the constrained strategic thinking in China about the role of airpower and force modernization will affect the ability of The Chinese People's Liberation Army Air Force to become a credible offensive threat against the U.S. or its Asian allies.

**Infrastructure's Role in Lowering Asia's Trade Costs** Douglas H. Brooks, David Hummels, 2005 Much of the analysis of infrastructure's impact on trade costs focuses on conditions in developed countries. This book makes an invaluable contribution to our understanding by examining the situation in developing Asia, the world's most populous and fastest growing region. This study analyzes and draws policy implications from infrastructure's central role in lowering Asia's trade costs. Infrastructure is shown to be a cost-effective means of lowering trade costs and thereby promoting regional growth and integration. This book combines thematic and country studies, while breaking new ground in.

**Open-Source Electronics Platforms** Trung Dung Ngo, 2019-05-20 Open-source electronics are becoming very popular, and are integrated with our daily educational and developmental activities. At present, the use open-source electronics for teaching science, technology, engineering, and mathematics (STEM) has become a global trend. Off-the-shelf embedded electronics such as Arduino- and Raspberry-compatible modules have been widely used for various applications, from do-it-yourself (DIY) to industrial projects. In addition to the growth of open-source software platforms, open-source electronics play an important role in narrowing the gap between prototyping and product development. Indeed, the technological and social impacts of open-source electronics in teaching, research, and innovation have been widely recognized.

*Natural Disasters and Extreme Events in Agriculture* Mannava VK Sivakumar, Raymond P. Motha, Haripada P. Das, 2005-12-06 Agricultural production is highly sensitive to weather and climate-related disasters such as drought, storm and flood. While it is not possible to prevent the occurrence of natural disasters, the resultant disastrous effects can be reduced mitigated through proper planning and effective preparation. This book, based on a gathering of experts in Beijing, discusses ways to reduce the vulnerability of agriculture to disaster and extreme events, both by accurate and timely warning, and by impact-reducing countermeasures.

**Urban Informatics** Wenzhong Shi,Michael F. Goodchild,Michael Batty,Mei-Po Kwan,Anshu Zhang,2021-04-06 This open access book is the first to systematically introduce the principles of urban informatics and its application to every aspect of the city that involves its functioning, control, management, and future planning. It introduces new models and tools being developed to understand and implement these technologies that enable cities to function more efficiently – to become ‘smart’ and ‘sustainable’. The smart city has quickly emerged as computers have become ever smaller to the point where they can be embedded into the very fabric of the city, as well as being central to new ways in which the population can communicate and act. When cities are wired in this way, they have the potential to become sentient and responsive, generating massive streams of ‘big’ data in real time as well as providing immense opportunities for extracting new forms of urban data through crowdsourcing. This book offers a comprehensive review of the methods that form the core of urban informatics from various kinds of urban remote sensing to new approaches to machine learning and statistical modelling. It provides a detailed technical introduction to the wide array of tools information scientists need to develop the key urban analytics that are fundamental to learning about the smart city, and it outlines ways in which these tools can be used to inform design and policy so that cities can become more efficient with a greater concern for environment and equity.
