Design of a Mars Airplane Propulsion System for the Aerial Regional-Scale Environmental Survey (Ares) Mission Concept National Aeronautics and Space Adm Nasa,2019-01-14 The Aerial Regional-Scale Environmental Survey (ARES) is a Mars exploration mission concept with the goal of taking scientific measurements of the atmosphere, surface, and subsurface of Mars by using an airplane as the payload platform. ARES team first conducted a Phase-A study for a 2007 launch opportunity, which was completed in May 2003. Following this study, significant efforts were undertaken to reduce the risk of the atmospheric flight system, under the NASA Langley Planetary Airplane Risk Reduction Project. The concept was then proposed to the Mars Scout program in 2006 for a 2011 launch opportunity. This paper summarizes the design and development of the ARES airplane propulsion subsystem beginning with the inception of the ARES project in 2002 through the submittal of the Mars Scout proposal in July 2006. Testing Aircraft, Exploring Space Roger E. Bilstein,2003 Selected by Choice Magazine as an Outstanding Academic Title for 2003 The National Advisory Committee for Aeronautics—forerunner of today's NASA—emerged in 1915, when airplanes were curiosities made of wood and canvas and held together with yards of baling wire. At the time an unusual example of government intrusion (and foresight, given the importance of aviation to national military concerns), the committee oversaw the development of wind tunnels, metal fabrication, propeller design, and powerful new high-speed aircraft during the 1920s and '30s. In this richly illustrated account, acclaimed historian of aviation Roger E. Bilstein combines the story of NACA and NASA to provide a fresh look at the agencies, the problems they faced, and the hard work as well as inventive genius of the men and women who found the solutions. NACA research during World War II led to critical advances in U.S. fighter and bomber design and, Bilstein explains, contributed to engineering standards for helicopters. After 1945 the agency's test pilots experimented with jet-powered aircraft, testing both human and technical limits in trying to break the so-called sound barrier. In October 1958, when the launch of the Soviet Sputnik signaled the beginning of the space race, NACA formed the nucleus of the new National Aeronautics and Space Agency. The new agency's efforts to meet President Kennedy's challenge—safely landing a man on the Moon and returning him to Earth before the end of the 1960s—is one of the great adventure stories of all time. Bilstein goes on to describe NASA's recent planetary and extraplanetary exploration, as well as its less well-known research into the future of aeronautical design.

Flight Research at NASA Langley Research Center Mark A. Chambers,2007 Following the creation of the National Advisory Committee for

Aeronautics in 1915, a unique flight research operations division was established at the nation's first civilian aeronautics research laboratory, the Langley Memorial Aeronautical Laboratory. Langley flight research personnel helped the nation's aircraft industry bloom during the Golden Era of aviation throughout the 1920s and 1930s. Langley's flight research then helped win World War II with performance-enhancing modifications to new aircraft. During the cold war, Langley helped the country maintain an edge in aeronautics over its Warsaw Pact rivals. When the space race began, the National Aeronautics and Space Administration (NASA) was created in 1958 and Langley's pilots were instrumental in training astronauts. In addition to advancing rotorcraft during the 1960s and 1970s, Langley research pioneered a multitude of military and civil Vertical Short Takeoff and Landing (V/STOL) concepts. During the 1970s, 1980s, and 1990s, Langley research developed advancements in general and commercial aviation technologies.

The Art of NASA Piers Bizony, 2020-10-06 Formed in 1958, NASA has long maintained a department of visual artists to depict the concepts and technologies created in humankind's quest to explore the final frontier. Culled from a carefully chosen reserve of approximately 3,000 files deep in the NASA archives, the 200 artworks presented in this large-format edition provide a glimpse of NASA history like no other. *A 2021 Locus Award Winner* From space suits to capsules, from landing modules to the Space Shuttle, the International Space Station, and more recent concepts for space planes, The Art of NASA presents 60 years of American space exploration in an unprecedented fashion. All the landmark early missions are represented in detail—Gemini, Mercury, Apollo—as are post-Space Race accomplishments, like the mission to Mars and other deep-space explorations. The insightful text relates the wonderful stories associated with the art. For instance, the incredibly rare early Apollo illustrations show how Apollo might have looked if the landing module had never been developed. Black-and-white Gemini drawings illustrate how the massive NASA art department did its stuff with ink pen and rubdown Letraset textures. Cross-sections of the Apollo–Soyuz Test Project docking adapter reveal Russian sensitivity about US “male” probes “penetrating” their spacecraft, thus the androgynous “adapter” now used universally in space. International Space Station cutaways show how huge the original plan was, but also what was retained. Every picture in The Art of NASA tells a special story. This collection of the rarest of the rare is not only a

unique view of NASA history—it's a fascinating look at the art of illustration, the development of now-familiar technologies, and a glimpse of what the space program might have looked like.

Expanding the Envelope Michael H. Gorn, 2014-10-17 Expanding the Envelope is the first book to explore the full panorama of flight research history, from the earliest attempts by such nineteenth century practitioners as England's Sir George Cayley, who tested his kites and gliders by subjecting them to experimental flight, to the cutting-edge aeronautical research conducted by the NACA and NASA. Michael H. Gorn explores the vital human aspect of the history of flight research, including such well-known figures as James H. Doolittle, Chuck Yeager, and A. Scott Crossfield, as well as the less heralded engineers, pilots, and scientists who also had the Right Stuff. While the individuals in the cockpit often receive the lion's share of the public's attention, Expanding the Envelope shows flight research to be a collaborative engineering activity, one in which the pilot participates as just one of many team members. Here is more than a century of flight research, from well before the creation of NACA to its rapid transformation under NASA. Gorn gives a behind the scenes look at the development of groundbreaking vehicles such as the X-1, the D-558, and the X-15, which demonstrated manned flight at speeds up to Mach 6.7 and as high as the edge of space.

Coming Home Roger D. Launius, Dennis R. Jenkins, 2012 NOTE; NO FURTHER DISCOUNT ON THIS PRINT PRODUCT-- OVERSTOCK SALE -- Significantly reduced list price The technologies for the reentry and recovery from space might change over time, but the challenge remains one of the most important and vexing in the rigorous efforts to bring spacecraft and their crews and cargo home successfully. Returning to Earth after a flight into space is a fundamental challenge, and contributions from the NASA Aeronautics Research Mission Directorate in aerodynamics, thermal protection, guidance and control, stability, propulsion, and landing systems have proven critical to the success of the human space flight and other space programs. Without this base of fundamental and applied research, the capability to fly into space would not exist.
