Marc Kaufman

*Mars Landing 2012* Marc Kaufman,2012-07-17 National Geographic presents the science, the goals, and the anticipation of humankind’s most ambitious planetary expedition ever: the Curiosity mission to Mars. On August 6, 2012 (EST), NASA’s Curiosity spacecraft will complete its 255-day, 354-million-mile journey and plunge down into Gale Crater, its target on the martian surface, decelerating from 13,200 to 0 mph in 7 minutes. The whole world will be watching this, the most complicated and precise landing ever undertaken, and wondering: What’s the inside story on this Curiosity mission, and what do NASA scientists hope Curiosity will find? In this e-short, written by Washington Post science correspondent Marc Kaufman and published just as the suspense builds, with Curiosity hurtling toward Mars, space science readers, techies, and informed news junkies will find answers to these and other fascinating questions about the red planet.

*The Design and Engineering of Curiosity* Emily Lakdawalla,2018-03-27 This book describes the most complex machine ever sent to another planet: Curiosity. It is a one-ton robot with two brains, seventeen cameras, six wheels, nuclear power, and a laser beam on its head. No one human understands how all of its systems and instruments work. This essential reference to the Curiosity mission explains the engineering behind every system on the rover, from its rocket-powered jetpack to its radioisotope thermoelectric generator to its fiendishly complex sample handling system. Its lavishly illustrated text explains how all the instruments work -- its cameras, spectrometers, sample-cooking oven, and weather station -- and describes the instruments' abilities and limitations. It tells you how the systems have functioned on Mars, and how scientists and engineers have worked around problems developed on a faraway planet: holey wheels and broken focus lasers. And it explains the grueling mission operations schedule that keeps the rover working day in and day out.
