T. A. Heppenheimer

Facing the Heat Barrier T. A. Heppenheimer, 2006 Hypersonics is the study of flight at speeds where aerodynamic heating dominates the physics of the problem. Typically this is Mach 5 and higher. Hypersonics is an engineering science with close links to supersonics and engine design. Within this field, many of the most important results have been experimental. The principal facilities have been wind tunnels and related devices, which have produced flows with speeds up to orbital velocity. Why is it important? Hypersonics has had two major applications. The first has been to provide thermal protection during atmospheric entry. Success in this enterprise has supported ballistic-missile nose cones, has returned strategic reconnaissance photos from orbit and astronauts from the Moon, and has even dropped an instrument package into the atmosphere of Jupiter. The last of these approached Jupiter at four times the speed of a lunar mission returning to Earth. Work with re-entry has advanced rapidly because of its obvious importance. The second application has involved high-speed propulsion and has sought to develop the scramjet as an advanced airbreathing ramjet. Scramjets are built to run cool and thereby to achieve near-orbital speeds. They were important during the Strategic Defense Initiative, when a set of these engines was to power the experimental X-30 as a major new launch vehicle. This effort fell short, but the X-43A, carrying a scramjet, has recently flown at Mach 9.65 by using a rocket. Atmospheric entry today is fully mature as an engineering discipline. Still, the Jupiter experience shows that work with its applications continues to reach for new achievements. Studies of scramjets, by contrast, still seek full success, in which such engines can accelerate a vehicle without the use of rockets. Hence, there is much to do in this area as well. For instance, work with computers may soon show just how good scramjets can become. NASA SP-2007-4232

Women in Space - Following Valentina Shayler David, Ian A. Moule, 2006-08-29 * This is the only book that provides the full story of the role of women in space exploration. * Previously unpublished photographs of various aspects of training and participation in spaceflights are included. * Personal interviews with female cosmonauts and astronauts. * Traces the history of female aviation milestones from the early part of the 20th Century to the current space programme.

Kursk 1943 Anders Frankson, Niklas Zetterling, 2016-12-05 The battle at Kursk in 1943 is often referred to as the greatest tank battle in the history of warfare. This volume makes extensive use of German archival documents as well as various Russian books and articles. As well as an account of the battle, it addresses methodological issues.

Virgin Galactic Erik Seedhouse, 2015-02-23 Thirty years ago when Sir Richard Branson called up Boeing and asked if they had a spare 747, few would have predicted the brash entrepreneur would so radically transform the placid business of air travel. But today, Branson flies airlines on six continents, employs hundreds of jets and, in 2014, was predicting that his spaceship company – Virgin Galactic – would soon open the space frontier to commercial astronauts, payload specialists, scientists and space tourists. With more than 600 seats sold at \$250,000 each, what started off as a dream to send people just for the excitement to look back and marvel at Earth, was on the cusp of finally being turned into a business. Then, on October 21, 2014, tragedy struck. SpaceShipTwo was on its most ambitious test flight to date. Seconds after firing its engine, Virgin Galactic's spaceship was breaking through the sound barrier. In just the three seconds that it took for the vehicle to climb from Mach 0.94 to Mach 1.02, co-pilot Mike Alsbury made what many close to the event believe was a fatal mistake that led to his death and the disintegration of SpaceShipTwo. Miraculously, the pilot, Peter Siebold, survived the 16-km fall back to Earth. Soon after the event Branson vowed to continue his space tourism venture in spite of this. Already a second SpaceShipTwo is being built, and ticket-holders eagerly await the day when Virgin Galactic offers quick, routine and affordable access to the edge of space. This book explains the hurdles Virgin Galactic had and still has to overcome en route to developing suborbital space travel as a profitable economic entity, and describes the missions that will be flown on board SpaceShipTwo Mk II, including high-altitude science studies, astronomy, life sciences, and microgravity physics.

NASA's First 50 Years Historical Perspectives Steven J. Dick, 2010-08-20 Fifty years after the founding of NASA, from 28 to 29 October 2008, the NASA History Division convened a conference whose purpose was a scholarly analysis of NASA's first 50 years. Over two days at NASA Headquarters, historians and policy analysts discussed NASA's role in aeronautics, human spaceflight, exploration, space science, life science, and Earth science, as well as crosscutting themes ranging from space access to international relations in space and NASA's interaction with the public. The speakers were asked to keep in mind the following questions: What are the lessons learned from the first 50 years? What is NASA's role in American culture and in the history of exploration and discovery? What if there had never been a NASA? Based on the past, does NASA have a future? The results of those papers, elaborated and fully referenced, are found in this 50th anniversary volume. The reader will find here, instantiated in the complex institution that is NASA, echoes of perennial themes elaborated in an earlier volume, *Critical Issues in the History of Spaceflight*. The conference culminated a year of celebrations, beginning with an October 2007 conference celebrating the 50th anniversary of the Space Age and including a lecture series, future forums, publications, a large presence at the Smithsonian Folklife Festival, and numerous activities at NASA's 10 Centers and venues around the country. It took place as the Apollo 40th anniversaries began, ironically still the most famous of NASA's achievements, even in the era of the Space Shuttle, International Space Station (ISS), and spacecraft like the Mars Exploration Rovers (MERs) and the Hubble Space Telescope. And it took place as NASA found itself at a major crossroads, for the first time in three decades transitioning, under Administrator Michael Griffin, from the Space Shuttle to a new Ares launch vehicle and Orion crew vehicle capable of returning humans to the Moon and proceeding to Mars in a program known as Constellation. The Space Shuttle, NASA's launch system since 1981, was scheduled to wind down in 2010, freeing up funds for the new Ares launch vehicle. But the latter, even if it moved forward at all deliberate speed, would not be ready until 2015, leaving the unsettling possibility that for at least five years the United States would be forced to use the Russian Soyuz launch vehicle and spacecraft as the sole access to the ISS in which the United States was the major partner. The presidential elections a week after the conference presaged an imminent presidential transition, from the Republican administration of George W. Bush to (as it turned out) the Democratic presidency of Barack Obama, with all the uncertainties that such transitions imply for government programs. The uncertainties for NASA were even greater, as Michael Griffin departed with the outgoing administration and as the world found itself in an unprecedented global economic downturn, with the benefits of national space programs questioned more than ever before. There was no doubt that 50 years of the Space Age had altered humanity in numerous ways ranging from applications satellites to philosophical world views. Throughout its 50 years, NASA has been fortunate to have a strong sense of history and a robust, independent, and objective history program to document its achievements and analyze its activities. Among its flagship publications are *Exploring the Unknown: Selected Documents in the History of the U.S. Civil Space Program*, of which seven of eight projected volumes were completed at the time of the 50th anniversary. The reader can do no better than to turn to these volumes for an introduction to NASA history as seen through its primary documents. The list of NASA publications at the end of this volume is also a testimony to the tremendous amount of historical research that the NASA History Division has sponsored over the last 50 years, of which this is the latest volume.

The Rocket into Planetary Space Hermann Oberth, 2014-10-22 For all being interested in astronautics, this translation of Hermann Oberth's classic work is a truly historic event. Readers will be impressed with this extraordinary pioneer and his incredible achievement. In a relatively short work of 1923, Hermann Oberth laid down the mathematical laws governing rocketry and spaceflight, and he offered practical design considerations based on those laws.

My Commando Operations Otto Skorzeny, 1995 The memoirs of the legendary Skorzeny appear here in its first unabridged English edition. Skorzeny's fame began with the successful raid to free Benito Mussolini from the Gran Sasso, Italy in 1943. His elite commandos surprised Italian guards in a daring daytime raid. Hitler presented Skorzeny with the Knight's Cross for this operation. Not only is this raid explained in minute detail, many of Skorzeny's previously unknown operations in all European and Russian theatres of World War II are given in detailed accounts. Operation Griffin - the innovative use of German Kommandos dressed as American soldiers working behind enemy lines - during the Ardennes Offensive in 1944 is

given in-depth coverage, as is Skorzeny's remembrances on the Malmedy massacre. Skorzeny also offers his insights into the mysterious Rudolf Hess mission to England in May 1941, and offers a behind the scenes look at German and Russian secret military intelligence, and the workings of Canaris and Gehlen.

Hitler's Flying Saucers Henry Stevens,2012-11-29 WWII expert Stevens shows us the incredible and suppressed technology of the Third Reich and their desire to create highly advanced “wingless” aircraft-yes, flying saucers! Learn why the Schriever-Habermohl project was actually two projects and read the written statement of a German test pilot who actually flew one of these saucers; about the Leduc engine, the key to Dr. Miethes saucer designs; how US government officials kept the truth about foo-fighters hidden for almost sixty years and how they were finally forced to come clean about the German origin of foo fighters. Learn of the Peenemuende saucer project and how it was slated to go atomic. Read the testimony of a German eyewitness who saw magnetic discs. Read the U.S. governments own reports on German field propulsion saucers. Read how the post-war German KM-2 field propulsion rocket worked. Learn details of the work of Karl Schappeller and Viktor Schauberger. Learn how their ideas figure in the quest to build field propulsion flying discs. Find out what happened to this technology after the war. Find out how the Canadians got saucer technology directly from the SS. Find out about the surviving Third Power of former Nazis. Learn of the US government’s methods of UFO deception and how they used the German Sonderbueroll as the model for Project Blue Book.

Luftwaffe Over America Manfred Griehl,2016-03-30 The plans that Nazi Germany had to raid - and bomb - New York and the eastern seabord are revealed in this book. They were were based on the use of transoceanic aircraft planes, such as the six-engined Ju 390, Me 264 or Ta 400, but the Third Reich was unable to produce such machines in sufficient numbers. If the Soviet Union had been conquered, however, these plans would have become a reality. With the seizure of vital resources from the Soviet Union the Wehrmacht would have had enough fuel and material to mass-produce giant bomber aircraft: it was a near run thing. The collapse of the Wehrmacht infrastructure and the end of the Thousand-Year Reich ensured that plans for long-range remote-controlled missiles never got off the drawing board and were never manufactured. Manfred Griehl makes it clear that until the collapse, numerous secret research laboratories seemed to have worked in parallel seeking nuclear power and explosives. Only classified material held within British, French and American archives can prove whether these groups were close to perfecting small atomic explosives. But, without a shadow of doubt, Germany was far more technologically advanced by the end of 1944 that has been previously suspected.

World's Worst Aircraft Jim Winchester,2008-07-30 Describes the aircraft with the least success, including planes that were obsolete, based on ideas that did not work, powered by engines that were too weak, or had stability problems.

The Morality of War - Second Edition Brian Orend,2013-09-10 The first edition of The Morality of War was one of the most widely-read and successful books ever written on the topic. In this second edition, Brian Orend builds on the substantial strengths of the first, adding important new material on: cyber-warfare; drone attacks; the wrap-up of Iraq and Afghanistan; conflicts in Libya and Syria; and protracted struggles (like the Arab-Israeli conflict). Updated and streamlined throughout, the book offers new research tools and case studies, while keeping the winning blend of theory and history featured in the first edition. This book remains an engaging and comprehensive examination of the ethics, and practice, of war and peace in today’s world.

Critical Issues in the History of Spaceflight Steven J. Dick,Roger D. Launius,2006 In March 2005, the NASA History Division and the Division of Space History at the National Air and Space Museum brought together a distinguished group of scholars to consider the state of the discipline of space history. This volume is a collection of essays based on those deliberations. The meeting took place at a time of extraordinary transformation for NASA, stemming from the new Vision of Space Exploration announced by President George W. Bush in January 2004: to go to the Moon, Mars, and beyond. This Vision, in turn, stemmed from a deep reevaluation of NASA’s goals in the wake of the Space Shuttle Columbia accident and the recommendations of the Columbia Accident Investigation Board. The new goals were seen as initiating a New Age of Exploration and were placed in the context of the importance of exploration and discovery to the American experiences. (Amazon).

The Mighty Eighth Roger Anthony Freeman,2000 The US 8th Air Force was based in the UK from 1942 onwards, spread exclusively across East Anglia and operating from over 40 locations. The remains of some of these sites can still be found and a few are still airfields. The 8th flew intensive bomber and fighter sorties over Europe. Over 2000 aircraft, mostly B-17s, B-26s and P-47s, involving 150,000 men and a vastly sophisticated supply chain, were engaged in a ceaseless war of high-altitude daylight precision bombing that did much to secure eventual Allied success.
