Yearbook on Space Policy 2008/2009 Kai-Uwe Schrogl, Blandina Baranes, Christophe Venet, Wolfgang Rathgeber, 2011-02-02

The Yearbook on Space Policy aims to be the reference publication analysing space policy developments. Each year it presents issues and trends in space policy and the space sector as a whole. Its scope is global and its perspective is European. The Yearbook also links space policy with other policy areas. It highlights specific events and issues, and provides useful insights, data and information on space activities. The Yearbook on Space Policy is edited by the European Space Policy Institute (ESPI) based in Vienna, Austria. It combines in-house research and contributions of members of the European Space Policy Research and Academic Network (ESPRAN), coordinated by ESPI. The Yearbook is designed for government decision-makers and agencies, industry professionals, as well as the service sectors, researchers and scientists and the interested public.

North Korea - US Relations Ramon Pacheco Pardo, 2019-09-04 How has North Korea sought to normalize diplomatic relations with the US? Explaining the continuities between the Kim Jong-un and Kim Jong-il governments, as well as the discontinuities, especially the decisive move towards brinkmanship under Kim Jong-un culminating in 2017, this book shows how North Korea has constantly learnt from its own experience and the experience of others to evolve and adapt its policy towards the US. This fully revised and expanded second edition draws on interviews and conversations with American, North and South Korean, Chinese and other countries' policy-makers and experts and North Korean official media stories. It has been updated to include discussion of the post-2012 period when Kim Jong-un replaced his father to become the leader of North Korea, and provides detailed analysis of both presidencies, concluding with a study of the two bilateral summits held with President Donald Trump. Showing how weaker powers can try to achieve their main foreign policy goals with respect to great powers, this book will be of interest to scholars and students of the international relations of East Asia, US Foreign Policy, Korean Studies and Foreign Policy Analysis. It should also prove relevant to those studying international bargaining and negotiation.

Encyclopedia of Solid Earth Geophysics Harsh Gupta, 2011-06-29 The past few decades have witnessed the growth of the Earth Sciences in the pursuit of knowledge and understanding of the planet that we live on. This development addresses the challenging endeavor to enrich human lives with the bounties of Nature as well as to preserve the planet for the generations to come. Solid Earth Geophysics aspires to define and quantify the internal structure and processes of the Earth in terms of the principles of physics and forms the intrinsic framework, which other allied disciplines utilize for more specific investigations. The first edition of the Encyclopedia of Solid Earth Geophysics was published in 1989 by Van Nostrand Reinhold publishing company. More than two decades later, this new volume, edited by Prof. Harsh K. Gupta, represents a thoroughly revised and expanded reference work. It brings together more than 200 articles covering established and new concepts of Geophysics across the various sub-disciplines such as Gravity, Geodesy, Geomagnetism, Seismology, Seismics, Deep Earth Processes, Plate Tectonics, Thermal Domains, Computational Methods, etc. in a systematic and consistent format and standard. It is an authoritative and current reference source with extraordinary width of scope. It draws its unique strength from the expert contributions of editors and authors across the globe. It is designed to serve as a valuable and cherished source of information for current and future generations of professionals.

The International Missile Bazaar William C. Potter, Harlan W. Jencks, 2021-05-31 This book discusses interconnections of missile technology networks to present discussions about missile proliferation in the Third World. It examines missile technology transactions and capabilities, structures of trade, and the norms influencing each country's dealings in the international arena.

North Korea Larry Niksch, 2010-02 In late 2006 and early 2007, the Bush Admin. reportedly offered North Korea (NK) removal from the U.S. terrorism list if NK agreed to end its nuclear programs. U.S. and NK diplomats negotiated much of the Six Party Nuclear Agreement, which was signed on 2/13/07, which specified that the U.S. and NK would begin to negotiate a process of removal of NK from the terrorism list. In 8-9/07, the State Dept. made promises to NK's chief negotiator to remove NK as part of the process to implement Phase Two of the 2/07 nuclear agreement. They set a deadline of 12/31/07, for completion of Phase II, which requires NK to allow the 'disablement' of its plutonium facilities at Yongbyon. This report, updated on 12/11/07, discusses these issues.

Handbook of Satellite Orbits Michel Capderou, 2014-04-23 Fifty years after Sputnik, artificial satellites have become indispensable monitors in many areas, such as economics, meteorology, telecommunications, navigation and remote sensing. The specific orbits are important for the proper functioning of the satellites. This book discusses the great variety of satellite orbits, both in shape (circular to highly elliptical) and properties (geostationary, Sun-synchronous, etc.). This volume starts with an introduction into geodesy. This is followed by a presentation of the fundamental equations of mechanics to explain and demonstrate the properties for all types of orbits. Numerous examples are included, obtained through IXION software developed by the author. The book also includes an exposition of the historical background that is necessary to help the reader understand the main stages of scientific thought from Kepler to GPS. This book is intended for researchers, teachers and students working in the field of satellite technology. Engineers, geographers and all those involved in space exploration will find this information valuable. Michel Capderou's book is an essential treatise in orbital mechanics for all students, lecturers and practitioners in this field, as well as other aerospace systems engineers. —Charles Elachi, Director, NASA Jet Propulsion Laboratory

Ballistic Missiles in the Third World W. Seth Carus, 1990-09-25 The proliferation of ballistic missiles in the Third World has posed a new type of challenge to policy makers in the United States. More than twenty Third World countries either possess surface-to-surface missiles or are trying to develop or acquire them. Current trends suggest that the number of countries with missiles will increase in the 1990s and that the capabilities of the available systems will also grow. W. Seth Carus assesses the threat of such proliferation to United States military forces as well as those of its allies operating in the Third World. The book studies the military utility of these missiles to the countries that possess them and covers the various military responses of Third World countries to missile proliferation. Carus also examines the various attempts the United States has made to slow the proliferation of ballistic missiles. Washington has joined many of its allies in the Missile Technology Control Regime (MTCR), a suppliers agreement designed to restrict exports of missiles and missile technologies to the Third World. According to Carus, efforts have been made to persuade the Soviet Union, China and other countries to abide by the provisions of the MTCR. After discussing the bilateral talks with proliferating countries, Carus also analyzes the attempts made to derail specific missile programs and the difficulties involved in controlling missile technology.

Emerging Space Powers Brian Harvey, Henk H. F. Smid, Theo Pirard, 2011-01-30 This work introduces the important emerging space powers of the world. Brian Harvey describes the origins of the Japanese space program, from rocket designs based on WW II German U-boats to tiny solid fuel 'pencil' rockets, which led to the launch of the first Japanese satellite in 1970. The next two chapters relate how Japan expanded its space program, developing small satellites into astronomical observatories and sending missions to the Moon, Mars, comet Halley, and asteroids. Chapter 4 describes how India's Vikram Sarabhai developed a sounding rocket program in the 1960s. The following chapter describes the expansion of the Indian space program. Chapter 6 relates how the Indian space program is looking ahead to the success of the moon probe Chandrayan, due to launch in 2008, and its first manned launching in 2014. Chapters 7, 8, and 9 demonstrate how, in Iran, communications and remote sensing drive space technology. Chapter 10 outlines Brazil's road to space, begun in the mid-1960's with the launch of the Sonda sounding rockets. The following two chapters describe

Brazil's satellites and space launch systems and plans for the future. Chapters 13 and 14 study Israel's space industry. The next chapters look at the burgeoning space programs of North and South Korea. The book ends by contrasting and comparing all the space programs and speculating how they may evolve in the future. An appendix lists all launches and launch attempts to date of the emerging space powers.

The Complete Book of Spaceflight David Darling, 2008-04-21 A commanding encyclopedia of the history and principles of spaceflight—from earliest conceptions to faster-than-light galaxy-hopping Here is the first truly comprehensive guide to space exploration and propulsion, from the first musings of the Greeks to current scientific speculation about interstellar travel using warp drives and wormholes. Space buffs will delight in its in-depth coverage of all key manned and unmanned missions and space vehicles—past, present, and projected—and its clear explanations of the technologies involved. Over the course of more than 2,000 extensively cross-referenced entries, astronomer David Darling also provides fascinating insights into the cultural development of spaceflight. In vivid accounts of the major characters and historical events involved, he provides fascinating tales of early innovators, the cross-pollination that has long existed between science fiction and science fact, and the sometimes obscure links between geopolitics, warfare, and advances in rocketry.

Shield of the Great Leader Joseph S. Bermudez, 2003 The first unclassified account of the armed forces of one of the most isolated and unpredictable nations in Asia - North Korea.

Fifty Years of the Outer Space Treaty Ajey Lele, 2017 The Outer Space Treaty (OST) was signed on January 27, 1967 as a binding legal instrument. Over the years this treaty has largely ensured responsible conduct of space activities. This book attempts to examine and contextualize the treaty and its relevance in the 21st century while tracing its journey over the last fifty years.

Nuclear North Korea Victor D. Cha, David C. Kang, 2018-09-11 Victor D. Cha and David C. Kang's Nuclear North Korea was first published in 2003 amid the outbreak of a lasting crisis over the North Korean nuclear program. It promptly became a landmark of an ongoing debate in academic and policy circles about whether to engage or contain North Korea. Fifteen years later, as North Korea tests intercontinental ballistic missiles and the U.S. president angrily refers to Kim Jong-un as "Rocket Man," Nuclear North Korea remains an essential guide to the difficult choices we face. Coming from different perspectives—Kang believes the threat posed by Pyongyang has been inflated and endorses a more open approach, while Cha is more skeptical and advocates harsher measures, though both believe that some form of engagement is necessary—the authors together present authoritative analysis of one of the world's thorniest challenges. They refute a number of misconceptions and challenge the faulty thinking that surrounds the discussion of North Korea, particularly the idea that North Korea is an irrational actor. Cha and Kang look at the implications of a nuclear North Korea, assess recent and current approaches to sanctions and engagement, and provide a functional framework for constructive policy. With a new chapter on the way forward for the international community in light of continued nuclear tensions, this book is of lasting relevance to understanding the state of affairs on the Korean peninsula.

The Hidden History of the Korean War, 1950–1951 I. F. Stone, 2014-09-16 "A great journalist" raises troubling questions about the forgotten war in this courageous, controversial book—with a new introduction by Bruce Cumings (The Baltimore Sun). "Much about the Korean War is still hidden, and much will long remain hidden. I believe I have succeeded in throwing new light on its origins." —From the author's preface In 1945 US troops arrived in Korea for what would become America's longest-lasting conflict. While history books claim without equivocation that the war lasted from 1950 to 1953, those who have actually served there know better. By closely analyzing US intelligence before June 25, 1950 (the war's official start), and the actions of key players like John Foster Dulles, General Douglas MacArthur, and Chiang Kai-shek, the great investigative reporter I. F. Stone demolishes the official story of America's "forgotten war" by shedding new light on the tangled sequence of events that led to it. The Hidden History of the Korean War was first published in 1952—during the Korean War—and then republished during the Vietnam War. In the 1990s, documents from the former Soviet archives became available, further illuminating this controversial period in history.

Space Capstone Publication Spacepower US Government United States Space Force, 2020-08-11 This book, Space Capstone Publication Spacepower: Doctrine for Space Forces, is capstone doctrine for the United States Space Force and represents our Service's first articulation of an independent theory of spacepower. This publication answers why spacepower is vital for our Nation, how military spacepower is employed, who military space forces are, and what military space forces value. In short, this capstone document is the foundation of our professional body of knowledge as we forge an independent military Service committed to space operations. Like all doctrine, the SCP remains subject to the policies and strategies that govern its employment. Military spacepower has deterrent and coercive capacities - it provides independent options for National and Joint leadership but achieves its greatest potential when integrated with other forms of military power. As we grow spacepower theory and doctrine, we must do so in a way that fosters greater integration with the Air Force, Army, Navy, Marine Corps, and Coast Guard. It is only by achieving true integration and interdependence that we can hope to unlock spacepower's full potential.

From Stalin to Kim Il Sung Andrei Nikolaevich Lan'kov, 2002 Andrei Lankov traces the formation of the North Korean state and the early years of Kim Il Sung's rule, when the future Great Leader and his entourage were consolidating their power base. Surveying the situation in North Korea after 1945, Lankov explores the internal composition of the ruling elite, the role of the Soviets, and the uneasy relations between various political groups. He also focuses on how in 1956 Kim Il Sung defeated the only known attempt to oust him and thereby established absolute personal rule beyond either Soviet or Chinese control.

Ambiguities of Domination Lisa Wedeen, 2015-09-09 Treating rhetoric and symbols as central rather than peripheral to politics, Lisa Wedeen's groundbreaking book offers a compelling counterargument to those who insist that politics is primarily about material interests and the groups advocating for them. During the thirty-year rule of President Hafiz al-Asad's regime, his image was everywhere. In newspapers, on television, and during orchestrated spectacles. Asad was praised as the "father," the "gallant knight," even the country's "premier pharmacist." Yet most Syrians, including those who create the official rhetoric, did not believe its claims. Why would a regime spend scarce resources on a personality cult whose content is patently spurious? Wedeen shows how such flagrantly fictitious claims were able to produce a politics of public dissimulation in which citizens acted as if they revered the leader. By inundating daily life with tired symbolism, the regime exercised a subtle, yet effective form of power. The cult worked to enforce obedience, induce complicity, isolate Syrians from one another, and set guidelines for public speech and behavior. Wedeen's ethnographic research demonstrates how Syrians recognized the disciplinary aspects of the cult and sought to undermine them. In a new preface, Wedeen discusses the uprising against the Syrian regime that began in 2011 and questions the usefulness of the concept of legitimacy in trying to analyze and understand authoritarian regimes.

North Korea and Nuclear Weapons Sung Chull Kim, Michael D. Cohen, 2017-05-01 North Korea is perilously close to developing strategic nuclear weapons capable of hitting the United States and its East Asian allies. Since their first nuclear test in 2006, North Korea has struggled to perfect the required delivery systems. Kim Jong-un's regime now appears to be close, however. Sung Chull Kim, Michael D. Cohen, and the volume contributors contend that the time to prevent North Korea from achieving this capability is virtually over; scholars and policymakers must turn their attention to how to deter a nuclear North Korea. The United States, South Korea, and Japan must also come to terms with the fact that North Korea will be able to deter them with its nuclear arsenal. How will the erratic Kim Jong-un behave when North Korea develops the capability to hit medium- and long-range targets with nuclear weapons? How will and should the United States, South Korea, Japan, and China respond, and what will this mean for regional

stability in the short term and long term? The international group of authors in this volume address these questions and offer a timely analysis of the consequences of an operational North Korean nuclear capability for international security.
