*How to Make Paper Dinosaurs* Mari Ono, Hiroaki

Takai, 2018-09-11 Go back to the days when dinosaurs ruled the earth with *How to Make Paper Dinosaurs*, the great origami book containing 25 prehistoric paper-folding projects to sink your teeth into. With big dinosaurs, small ones, ocean-dwellers, and high flyers, there are origami projects here to entertain any dino lover. Try your hand at the flying Pteranodon or fold one of the largest land animals that ever existed, the Apatosaurus. From the Cretaceous period you can make the king of dinosaurs, the Tyrannosaurus Rex, and from the Jurassic age comes the spiny Stegosaurus. Every project has simple step-by-step instructions and clear photographs, as well as helpful arrows showing you where to fold. Each design is allocated a skill rating—start with an easy one and once you've mastered that move on to something a bit more challenging. The book includes 50 specially designed pieces of origami paper so you can start folding right away.

3D Origami Art Jun Mitani, 2017-12-19 Easily Create Origami with Curved Folds and Surfaces Origami—making shapes only through folding—reveals a fascinating area of geometry woven with a variety of representations. The world of origami has progressed dramatically since the advent of computer programs to

perform the necessary computations for origami design. 3D Origami Art presents the design methods underlying 3D creations derived from computation. It includes numerous photos and design drawings called crease patterns, which are available for download on the author's website. Through the book's clear figures and descriptions, readers can easily create geometric 3D structures out of a set of lines and curves drawn on a 2D plane. The author uses various shapes of sheets such as rectangles and regular polygons, instead of square paper, to create the origami. Many of the origami creations have a 3D structure composed of curved surfaces, and some of them have complicated forms. However, the background theory underlying all the creations is very simple. The author shows how different origami forms are designed from a common theory.

**Origami for the Enthusiast** John Montroll, 1979 Twenty-five original paper animal creations offer strong challenges to origamists seeking advanced projects. Well-known origamist Montroll shows how to fold fish, ostrich, peacock, squirrel, rhinoceros, Pegasus, and 19 other intricate subjects. Complete instructions. Diagrams.

*Learning Stories* Margaret Carr, Wendy Lee, 2012-03-19 Margaret Carr's seminal work on Learning Stories was first published by SAGE in 2001, and this widely acclaimed approach to assessment has since gained a huge international following. In this new full-colour book, the authors outline the philosophy behind Learning Stories and refer to the latest findings from the research projects they have led with teachers on learning dispositions and learning power, to argue that Learning Stories can construct learner identities in early childhood settings and schools. By making the connection between sociocultural approaches to pedagogy and assessment, and narrative inquiry, this book contextualizes Learning Stories as a philosophical approach to education, learning and pedagogy. Chapters explore how Learning Stories: - help make connections with families - support the

inclusion of children and family voices - tell us stories about babies  
- allow children to dictate their own stories - can be used to revisit children's learning journeys - can contribute to teaching and learning wisdom This ground-breaking book expands on the concept of Learning Stories and includes examples from practice in both New Zealand and the UK. It outlines the philosophy behind this pedagogical tool for documenting how learning identities are constructed and shows, through research evidence, why the early years is such a critical time in the formation of learning dispositions. Margaret Carr is a Professor of Education at the University of Waikato, New Zealand. Wendy Lee is Director of the Educational Leadership Project, New Zealand.

**Explorer** ,2021-01-28 The year is 2065. The end of Earth and all its habitants is imminent. Using the world's greatest technologies, a new generation of highly advanced, autonomous robotic vehicles is developed to explore new lands for human colonization. Inspired by legendary futurists such as Syd Mead (Blade Runner), German industrial designer and concept artist Christian Grajewski used his expert knowledge of automotive design and his fascination with animal anatomy to create fifteen stunning, interplanetary vehicles. Each varies in size and technological capabilities, yet they are unified by one overarching goal: to preserve the human race. From the stealth rotorcraft Hornet to the massive space transporter Orca, the designs of Explorer were fueled by Grajewski's deep desire to launch vehicles beyond Earth's solar system. He drew from his professional experience working on the design team at Volkswagen Design Center Potsdam, where he developed concepts for such carmakers as Lamborghini, Audi, and Porsche. Explorer compiles Grajewski's early sketches, wondrous renderings, and design reflections that together make a case for historic multinational cooperation and the incredible innovations such collaborations can achieve.
