Anthony Dunne, Fiona Raby

ChildDance Diane Lynch Fraser,2000 Imagine there is no one in the world with whom you can communicate. All your attempts to reach out and make sense in the world are thwarted because there is no one who understands your language. This is a normal event in child development. Yet the child with disabilities has less adaptive skills than other children her age. Attempts are more frustrating. To make matters worse, the whole circle of communication between adult and child becomes thwarted as parents and therapists, instead of reading nonverbal cues accurately, misjudge them and send the whole communication circle spiraling downward. The character, the pacing, the whole theatre of our play and movement with young children is extremely important. As we believe children must learn to speak, we adults, parents and therapists, must learn to play. It's not that adults are not well meaning. Very many are. It's just that most adults have no idea how to be in the child's preverbal world. It is to this preverbal task that *ChildDance* is addressed. It describes one therapist's encounter with six different children with special needs, how child development theory and practice is woven together to form a fabric for preverbal communication.

The Life and Death of a Minke Whale in the Amazon Fábio Zuker,2022-06-07 As the Amazon burns, Fábio Zuker shares stories of resistance, self-determination, and kinship with the land. In 2007, a seven-ton minke whale was found stranded on the banks of the Tapajós River, hundreds of miles into the Amazon rainforest. For days, environmentalists, journalists, and locals followed the lost whale, hoping to guide her back to the ocean, but ultimately proved unable to save her. Ten years later, journalist Fábio Zuker travels to the state of Pará, to the town known as “the place where the whale appeared,” which developers are now eyeing for mining, timber, and soybean cultivation. In these essays, Zuker shares intimate stories of life in the rainforest and its surrounding cities during an age of raging wildfires, mass migration, populist politics, and increasing deforestation. As a group of Venezuelan migrants wait at a bus station in Manaus, looking for a place more stable than home, an elder in Alter do Chão becomes the first Indigenous person in Brazil to die from COVID-19 after years of fighting for the rights and recognition of the Borari people. The subjects Zuker interviews are often torn between ties with their ancestral territories and the push for capitalist gain; *The Life and Death of*

a Minke Whale in the Amazon captures the friction between their worlds and the resilience of movements for autonomy, self-definition, and respect for the land that nourishes us.

Speculative Everything Anthony Dunne,Fiona Raby,2013-12-06 How to use design as a tool to create not only things but ideas, to speculate about possible futures. Today designers often focus on making technology easy to use, sexy, and consumable. In *Speculative Everything*, Anthony Dunne and Fiona Raby propose a kind of design that is used as a tool to create not only things but ideas. For them, design is a means of speculating about how things could be—to imagine possible futures. This is not the usual sort of predicting or forecasting, spotting trends and extrapolating; these kinds of predictions have been proven wrong, again and again. Instead, Dunne and Raby pose “what if” questions that are intended to open debate and discussion about the kind of future people want (and do not want). *Speculative Everything* offers a tour through an emerging cultural landscape of design ideas, ideals, and approaches. Dunne and Raby cite examples from their own design and teaching and from other projects from fine art, design, architecture, cinema, and photography. They also draw on futurology, political theory, the philosophy of technology, and literary fiction. They show us, for example, ideas for a solar kitchen restaurant; a flypaper robotic clock; a menstruation machine; a cloud-seeding truck; a phantom-limb sensation recorder; and devices for food foraging that use the tools of synthetic biology. Dunne and Raby contend that if we speculate more—about everything—reality will become more malleable. The ideas freed by speculative design increase the odds of achieving desirable futures.

Dream Tonight of Peacock Tails Umberto Rossi,Paolo Simonetti,2015-09-04 *Dream Tonight of Peacock Tails* marks the first in-depth examination of Pynchon’s debut novel, which was immediately recognized as a breakthrough masterpiece. The eight essays collected in the volume provide both scholars and avid readers with new and original insights into a too-often underestimated work that, probably even more than *Gravity’s Rainbow*, established Pynchon as one of the great masters of twentieth-century American literature. This book deliberately privileges a multidisciplinary and transnational approach, encompassing collaborations from a particularly international and diverse academic context. As such, this volume offers a multifaceted pattern of expanding investigation that

tackles the novel's apparently chaotic but meticulously organized structure by rereading it in the light of recent US and European history and economics, as well as by exploring its many real and imagined locations. Not only are the essays brought together here revelatory of Pynchon's way of working, but they also tell us something about our own ways of approaching his fiction.

Flash Crash Liam Vaughan,2021-02-04 On May 6, 2010, financial markets around the world tumbled simultaneously and without warning. In the span of five minutes, a trillion dollars of valuation was lost. The Flash Crash, as it became known, represented the fastest drop in market history. When share values rebounded less than half an hour later, experts around the globe were left perplexed. What had they just witnessed? Navinder Singh Sarao hardly seemed like a man who would shake the world's financial markets to their core. Raised in a working-class neighbourhood in West London, Nav was a preternaturally gifted trader who played the markets like a computer game. By the age of thirty, he had left behind London's trading arcades, working instead out of his childhood home. For years the money poured in. But when lightning-fast electronic traders infiltrated markets and started eating into his profits, Nav built a system of his own to fight back. It worked-until 2015, when the FBI arrived at his door. Depending on whom you ask, Sarao was a scourge, a symbol of a financial system run horribly amok, or a folk hero-an outsider who took on the tyranny of Wall Street and the high-frequency traders. A real-life financial thriller, *Flash Crash* uncovers the remarkable, behind-the-scenes narrative of a mystifying market crash, a globe-spanning investigation into international fraud, and the man at the centre of them both.

All that is Solid Melts Into Air Marshall Berman,1983 The experience of modernization -- the dizzying social changes that swept millions of people into the capitalist world -- and modernism in art, literature and architecture are brilliantly integrated in this account.

The Talent Code Daniel Coyle,2009-04-28 What is the secret of talent? How do we unlock it? This groundbreaking work provides readers with tools they can use to maximize potential in themselves and others. Whether you're coaching soccer or teaching a child to play the piano, writing a novel or trying to improve your golf swing, this revolutionary book shows you how to grow talent by tapping into a newly discovered brain mechanism. Drawing on cutting-edge neurology and firsthand research

gathered on journeys to nine of the world's talent hotbeds—from the baseball fields of the Caribbean to a classical-music academy in upstate New York—Coyle identifies the three key elements that will allow you to develop your gifts and optimize your performance in sports, art, music, math, or just about anything.

- **Deep Practice** Everyone knows that practice is a key to success. What everyone doesn't know is that specific kinds of practice can increase skill up to ten times faster than conventional practice.
- **Ignition** We all need a little motivation to get started. But what separates truly high achievers from the rest of the pack? A higher level of commitment—call it passion—born out of our deepest unconscious desires and triggered by certain primal cues. Understanding how these signals work can help you ignite passion and catalyze skill development.
- **Master Coaching** What are the secrets of the world's most effective teachers, trainers, and coaches? Discover the four virtues that enable these “talent whisperers” to fuel passion, inspire deep practice, and bring out the best in their students. These three elements work together within your brain to form myelin, a microscopic neural substance that adds vast amounts of speed and accuracy to your movements and thoughts. Scientists have discovered that myelin might just be the holy grail: the foundation of all forms of greatness, from Michelangelo's to Michael Jordan's. The good news about myelin is that it isn't fixed at birth; to the contrary, it grows, and like anything that grows, it can be cultivated and nourished. Combining revelatory analysis with illuminating examples of regular people who have achieved greatness, this book will not only change the way you think about talent, but equip you to reach your own highest potential.

Milk! Mark Kurlansky,2018-05-08 Mark Kurlansky's first global food history since the bestselling *Cod and Salt*; the fascinating cultural, economic, and culinary story of milk and all things dairy--with recipes throughout. According to the Greek creation myth, we are so much spilt milk; a splatter of the goddess Hera's breast milk became our galaxy, the Milky Way. But while mother's milk may be the essence of nourishment, it is the milk of other mammals that humans have cultivated ever since the domestication of animals more than 10,000 years ago, originally as a source of cheese, yogurt, kefir, and all manner of edible innovations that rendered lactose digestible, and then, when genetic mutation made some of us lactose-tolerant, milk itself. Before the industrial revolution, it was common for

families to keep dairy cows and produce their own milk. But during the nineteenth century mass production and urbanization made milk safety a leading issue of the day, with milk-borne illnesses a common cause of death. Pasteurization slowly became a legislative matter. And today milk is a test case in the most pressing issues in food politics, from industrial farming and animal rights to GMOs, the locavore movement, and advocates for raw milk, who controversially reject pasteurization. Profoundly intertwined with human civilization, milk has a compelling and a surprisingly global story to tell, and historian Mark Kurlansky is the perfect person to tell it. Tracing the liquid's diverse history from antiquity to the present, he details its curious and crucial role in cultural evolution, religion, nutrition, politics, and economics.
