* The first book to explore washi as a medium for contemporary art* The book reveals the contemporary possibilities - as well as the time-honored essence - of a cultural tradition that has been deeply connected with art and life in Japan for more than a millennium* Collectively, the photographs represent a new concept of washi as they have never been published together before. The book also features previously unpublished photographs of new works by Yuko Nishimura and Ayomi Yoshida* The publication features photographs by Kyoko Ibe, one of the pioneers of contemporary washi that makes the traditional newHistorically, washi paper has been used as a base for Japanese calligraphy, painting, and printmaking as well as a material in architecture, religious ritual and clothing. In recent years, contemporary Japanese artists have turned this supple yet sturdy paper into a medium for expressing their artistic vision - layering, weaving, dyeing, shredding, folding, or cutting the paper to form abstract sculptures, lyrical

folding screens, highly textured wall pieces, and dramatic installations. This elegantly designed volume examines the extraordinary creations of these diverse contemporary artists from Japan, France, and the United States. The publication also demonstrates the resilience, versatility, and unique stature of this ancient artistic medium in the realm of international contemporary art.

Technological Transformation in the Global Pulp and Paper Industry 1800–2018 Timo Särkkä, Miquel Gutiérrez-Poch, Mark Kuhlberg, 2018-10-24 This contributed volume provides 11 illustrative case studies of technological transformation in the global pulp and paper industry from the inception of mechanical papermaking in early nineteenth century Europe until its recent developments in today's business environment with rapidly changing market dynamics and consumer behaviour. It deals with the relationships between technology

transfer, technology leadership, raw material dependence, and product variety on a global scale. The study itemises the main drivers in technology transfer that affected this process, including the availability of technology, knowledge, investments and raw materials on the one hand, and demand characteristics on the other hand, within regional, national and transnational organisational frameworks. The volume is intended as a basic introduction to the history of papermaking technology, and it is aimed at students and teachers as course material and as a handbook for professionals working in either industry, research centres or universities. It caters to graduate audiences in forestry, business, technical sciences, and history.

The Art of Paper Caroline O. Fowler, 2019 The untold story of how paper revolutionized art making during the Renaissance, exploring how it shaped broader concepts of authorship, memory, and the transmission of ideas over the course of three centuries. In the late medieval and Renaissance period, paper transformed society-not only through its role in the invention of print but also in the way it influenced artistic production. The Art of Paper tells the history of this medium in the context of the artist's workshop from the

thirteenth century, when it was imported to Europe from Africa, to the sixteenth century, when European paper was exported to the colonies of New Spain. In this pathbreaking work, Caroline Fowler approaches the topic culturally rather than technically, deftly exploring the way paper shaped concepts of authorship, preservation, and the transmission of ideas during this period. This book both tells a transcultural history of paper from the Cairo Genizah to the Mesoamerican manuscript and examines how paper became Europeanized through the various mechanisms of the watermark, colonization, and the philosophy of John Locke. Ultimately, Fowler demonstrates how paper-as refuse and rags transformed into white surface-informed the works for which it was used, as well as artists' thinking more broadly, across the early modern world--Publisher's description.

Nonlinear Estimation Gavin J.S. Ross, 2012-12-06

Non-Linear Estimation is a handbook for the practical statistician or modeller interested in fitting and interpreting non-linear models with the aid of a computer. A major theme of the book is the use of 'stable parameter systems'; these provide rapid convergence of optimization algorithms, more reliable dispersion matrices and confidence regions for parameters, and easier comparison of rival models. The book provides insights into why some models are difficult to fit, how to combine fits over different data sets, how to improve data collection to reduce prediction variance, and how to program particular models to handle a full range of data sets. The book combines an algebraic, a geometric and a computational approach, and is illustrated with practical examples. A final chapter shows how this approach is implemented in the author's Maximum Likelihood Program, MLP.
