Mechanical Self-Assembly Xi Chen,2012-12-15 Mechanical Self-Assembly: Science and Applications introduces a novel category of self-assembly driven by mechanical forces. This book discusses self-assembly in various types of small material structures including thin films, surfaces, and micro- and nano-wires, as well as the practice's potential application in micro and nanoelectronics, MEMS/NEMS, and biomedical engineering. The mechanical self-assembly process is inherently quick, simple, and cost-effective, as well as accessible to a large number of materials, such as curved surfaces for forming three-dimensional small structures. Mechanical self-assembly is complementary to, and sometimes offer advantages over, the traditional micro- and nano-fabrication.

Nature Transformed Kathleen M. Morris,2021 A beautifully illustrated, concise critical analysis of the art, careers, and reception of the husband-wife team of artists known as Les Lalanne François-Xavier (1927-2008) and Claude (1925-2019) Lalanne were a husband-wife team of artists who created inventive and often surprising works that have been widely admired and collected since the 1960s. This book presents a carefully selected group of sculptures that focus on a shared preoccupation of the artists: the transformation of natural forms to serve new purposes, such as François-Xavier's giant grasshopper sculpture that opens into a bar and Claude's bench made of galvanized metal branches and vines such that it remains as much a forest as a place to sit. Critical analysis explores the full breadth of the artists' careers; considers the complex issues of reception and categorization of their work; and prompts a reevaluation of the place their art occupies in the context of art museums, all while encouraging readers to consider relationships among nature, art, and their own encounters with both. Distributed for the Clark Art Institute Exhibition Schedule: Clark Art Institute, Williamstown, MA (May 8-October 31, 2021)
