Flying beyond the stall Douglas A. Joyce,2014 The X-31 Enhanced Fighter Maneuverability Demonstrator was unique among experimental aircraft. A joint effort of the United States and Germany, the X-31 was the only X-plane to be designed, manufactured, and flight tested as an international collaboration. It was also the only X-plane to support two separate test programs conducted years apart, one administered largely by NASA and the other by the U.S. Navy, as well as the first X-plane ever to perform at the Paris Air Show. *Flying Beyond the Stall* begins by describing the government agencies and private-sector industries involved in the X-31 program, the genesis of the supermaneuverability concept and its initial design breakthroughs, design and fabrication of two test airframes, preparation for the X-31's first flight, and the first flights of Ship #1 and Ship #2. Subsequent chapters discuss envelope expansion, handling qualities (especially at high angles of attack), and flight with vectored thrust. The book then turns to the program's move to NASA's Dryden Flight Research Center and actual flight test data. Additional tasking, such as helmet-mounted display evaluations, handling quality studies, aerodynamic parameter estimation, and a tailless study are also discussed. The book describes how, in the aftermath of a disastrous accident with Ship #1 in 1995, Ship #2 was prepared for its outstanding participation in the Paris Air Show. The aircraft was then shipped back to Edwards AFB and put into storage until the late 1990s, when it was refurbished for participation in the U. S. Navy's VECTOR program. The book ends with a comprehensive discussion of lessons learned and includes an Appendix containing detailed information.

Noel Merrill Wien Noel Merrill Wien,2016-04-19 Born into a family of aviators, Merrill Wien was destined to become a pilot. His father, Noel Wien, was one of the first pilots to fly in Alaska and his life was full of firsts, including making the first round-trip flight between Asia and North America in 1929. His mother played a big role in the founding and development of Wien Alaska Airlines, the second-oldest scheduled airline in the United States and territories. One of the most versatile and experienced pilots of his time, Merrill has flown just about every aircraft imaginable from DC-3s to Lockheed 1011s to historic military planes like the cargo C-46 and B-29 bomber to the Hiller UH-12E chopper. Although fundamentally modest by nature, family and friends encouraged Merrill to share his remarkable stories given his accomplishments and experiences with so many famous people and events. His tone is engagingly informal as he recounts crossing paths with such luminaries as Joe Crosson, Howard Hughes, Lowell Thomas Sr. and Lowell Thomas Jr., Sam White, Don Sheldon, Brad Washburn, Wally Schirra, and Bill Anders. He re-creates for readers his firsthand experiences flying top-secret missions for the Air Force, viewing the devastation of the Good Friday Earthquake in Anchorage, and the challenges of starting his own helicopter company, to name just a few. His fascinating narrative is complemented by photographs from his personal archives.

Air Transportation Dr John G. Wensveen,2012-10-01 Now in its Seventh Edition, *Air Transportation: A Management Perspective* by John Wensveen is a proven textbook that offers a comprehensive introduction to the theory and practice of air transportation management.

The Rule of Logistics Jesse LeCavalier,2016-08-26 Every time you wheel a shopping cart through one of Walmart's more than 10,000 stores worldwide, or swipe your credit card or purchase something online, you enter a mind-boggling logistical regime. Even if you've never shopped at Walmart, its logistics have probably affected your life. *The Rule of Logistics* makes sense of its spatial and architectural ramifications by analyzing the stores, distribution centers, databases, and inventory practices of the world's largest corporation. *The Rule of Logistics* tells the story of Walmart's buildings in the context of the corporation's entire operation, itself characterized by an obsession with logistics. Beginning with the company's founding in 1962, Jesse LeCavalier reveals how logistics—as a branch of knowledge, an area of work, and a collection of processes—takes shape and changes our built environment. Weaving together archival material with original drawings, LeCavalier shows how a diverse array of ideas, people, and things—military theory and chewing gum, Howard Dean and satellite networks, Hudson River School painters and real estate software, to name a few—are all connected through Walmart's logistical operations and in turn are transforming how its buildings are conceptualized, located, built, and inhabited. A major new contribution to architectural history and theory, *The Rule of Logistics* helps us understand how retailing today is changing our bodies, brains, buildings, and cities and predicts what future forms architecture might take when shaped by systems that exceed its current capacities.

More Readings From One Man's Wilderness John Branson,2012-03 Richard L. Proenneke--a modern-day Henry David Thoreau--built a cabin in Twin Lakes, Alaska, during the spring of 1968, sparking thirty years of personal growth in which he spent the majority of his time strengthening his relationship with the wilderness around him. Following in the footsteps of *One Man's Wilderness*, a classic book compiling some of the mountain man's journals, *More Readings from One Man's Wilderness* chronicles Proenneke's experiences with animals, the elements, park visitors, and observations he made while hiking in Lake Clark National Park and Preserve. A master woodcraftsman, a mechanical genius, a tireless hiker with a keen eye, and a journalist, Proenneke's life at Twin Lakes has inspired thousands of readers for decades. Editor John Branson--a longtime friend of Proenneke's and a park historian--ensures that Proenneke's journals from 1974-1980 are kept entirely intact. His colloquial writing is not changed or altered, but Branson's footnotes make his world more approachable by providing a background for names and places that may have otherwise been unknown. Any reader with a love for conservation and true-life wilderness narratives will undoubtedly admire and relish Proenneke's tales of living in the wild. Skyhorse Publishing, as well as our Sports Publishing imprint, is proud to publish a broad range of books for readers interested in sports--books about baseball, pro football, college football, pro and college basketball, hockey, or soccer, we have a book about your sport or your team. Integrating Multiscale Observations of U.S. Waters National Research Council,Division on Earth and Life Studies,Water Science and Technology Board,Committee on Integrated Observations for Hydrologic and Related Sciences,2008-04-16 Water is essential to life for humans and their food crops, and for ecosystems. Effective water management requires tracking the inflow, outflow, quantity and quality of ground-water and surface water, much like balancing a bank account. Currently, networks of ground-based instruments measure these in individual locations, while airborne and satellite sensors measure them over larger areas. Recent technological innovations offer unprecedented possibilities to integrate space, air, and land observations to advance water science and guide management decisions. This book concludes that in order to realize the potential of integrated data, agencies, universities, and the private sector must work together to develop new kinds of sensors, test them in field studies, and help users to apply this information to real problems.

One Man's Wilderness Richard Louis Proenneke,Sam Keith,2018-09-11 To live in a pristine land unchanged by man; to roam the wilderness through which few other humans have passed; to choose an idyllic site, cut trees, and build a log cabin; to be a self-sufficient craftsman, making what is needed from materials available; to be not at odds with the world, but content with one's own thoughts and company: thousands have had such dreams, but Richard Proenneke lived them. This book is a simple account of the day-by-day explorations and activities he carried out alone, and the constant chain of nature's events that kept him company. From Proenneke's journals, and with first-hand knowledge of his subject and the setting, Sam Keith has woven a tribute to a man who carved his masterpiece out of the beyond.--From publisher description.

Miles to Millions Bill Grenier,2017-06-27 When he became a commercial pilot at age nineteen, Bill Grenier never imagined that one day he'd be captain of the largest commercial plane the world had seen, flying the highest profile routes of a proud national carrier. Even less could he have imagined, at age nineteen and with barely a penny to his name, that he'd one day be a wealthy man. But he would ultimately control an empire worth nearly a billion dollars.With liberal doses of wit and humour, Miles to Millions shows what a little luck, lots of perseverance, and an appetite for adventure can do. From boarding house to boardroom, from cradle to cockpit, Grenier offers a fascinating story of success both as a commercial pilot and as a businessman. Filled with anecdotes you'd never expect from a single career - from acting as repo man taking planes for payment to saving hundreds of passengers in a stricken 747 with a collapsed co-pilot - Miles to Millions is a high-flier of a story bound to entertain both aviation experts and enthusiasts alike.
