**Brand Admiration** C. Whan Park, Deborah J. MacInnis, Andreas B. Eisingerich, 2016-09-16 Brand Admiration uses deep research on consumer psychology, marketing, consumer engagement and communication to develop a powerful, integrated perspective and innovative approach to brand management. Using numerous real-world examples and backed by research from top notch academics, this book describes how companies can turn a product, service, corporate, person or place brand into one that customers love, trust and respect; in short, how to make a brand admired. The result? Greater brand loyalty, stronger brand advocacy, and higher brand equity. Admired brands grow more revenue in a more efficient way over a longer period of time and with more opportunities for growth. The real power of Brand Admiration is that it provides concrete, actionable guidance on how brand managers can make customers (and employees) admire a brand. Admired brands don't just do the job; they offer exactly what customers need (enabling benefits), in way that's pleasing, fun, interesting, and emotionally involving (enticing benefits), while making people feel good about themselves (enriching benefits). Providing these benefits, called 3 Es, is foundational to building , strengthening and leveraging brand admiration. In addition, the authors articulate a common-sense and action based measure of brand equity, and they develop dashboard metrics to diagnose if there are any 'canaries in the coal mine', and if so, what to do next. In short, Brand Admiration provides a coherent, cohesive approach to helping the brand

stand the test of time. A well-designed, well-managed brand becomes a part of the public consciousness, and ultimately, a part of the culture. This trajectory is the fruit of decisions made from an integrated strategic standpoint. This book shows you how to shift the process for your brand, with practical guidance and an analytical approach.

*Papertoy Monsters* Brian Castleforte, 2010-12-29 A breakthrough paper-folding book for kids—paper airplanes meet Origami meets Pokemon. Papertoys, the Internet phenomenon that's hot among graphic designers and illustrators around the world, now comes to kids in the coolest new book. Created and curated by Brian Castleforte, a graphic designer and papertoy pioneer who rounded up 25 of the hottest papertoy designers from around the world (Indonesia, Japan, Australia, Italy, Croatia, Chile, even Jackson, Tennessee), Papertoy Monsters offers 50 fiendishly original die-cut designs that are ready to pop out, fold, and glue. The book interleaves card stock with paper stock for a unique craft package; the graphics are colorful and hip, combining the edginess of anime with the goofy fun of Uglydolls and other collectibles. Plus each character comes with its own back-story. And the results are delicious: meet Pharaoh Thoth Amon, who once ruled Egypt but is now a mummy who practices dark magic in his sarcophagus. Or Zumbie the Zombie, who loves nothing more than a nice plate of brains and yams. NotSoScary, a little monster so useless at frightening people that he has to wear a scary mask. Yucky Chuck, the lunchbox creature born in the deepest depths of your school bag. Plus Zeke, the monster under your bed, Nom Nom, eater of cities, and Grumpy Gramps, the hairy grandpa monster with his very own moustache collection.

Hybrid Animation Tina O'Hailey, 2012-11-12 Artist imaginations continue to grow and stretch the boundaries of traditional animation. Successful animators adept and highly skilled in traditional animation mediums are branching out beyond traditional animation workflows and will often use multiple forms of animation in a single project. With the knowledge of 3D and 2D assets and the integration of multiple animation mediums into a single project, animators have a wealth of creative resources available for a project that is not limited to a specific animation medium, software package or workflow process. Enhance a poignant scene by choosing to animate the scenic background in 2D while the main character is brought to life with 3D techniques. Balance the budget demands of a project by choosing to integrate a 2D or 3D asset to save time and expense. Choose which medium Hybrid Animation, learn the systematic development of the 2D and 3D assets and the issues surrounding choices made during the creative process.

**3D Printing Projects** DK,2017-10-03 From a simple desk tidy to an elaborate castle, this step-by-step guide to 3D printing is perfect for children and beginners who want to learn how to design and print anything even if they do not own a printer. 3D Printing Projects provides an introduction to the exciting and ever-expanding world of 3D designing and printing. Learn how a 3D printer works and the different types of 3D printers on the market. Understand the basic 3D printing and designing terms, how to create and prepare files for printing, and also how to scan things to create a 3D model! You will also find out the common troubles faced while 3D printing and simple tricks to fix them. All the projects included in the book can be made using freely available online 3D modeling/CAD programs. Each project has a print time, details of filament or material needed, and a difficulty rating - from easy for beginners to difficult for those looking for a new challenge. Step-by-step instructions walk you through the 3D design process, from digital modeling and sculpting to slicing, printing, and painting so that children can make their own shark-shaped phone stand, customized lamps, and much more. The book also gives inspiration to further enhance your projects once you've mastered the basics. Join the 3D printing revolution today with DK's 3D Printing Projects book.

**Nursing Informatics** Marion J. Ball,Kathryn J. Hannah,Ulla Gerdin Jelger,Hans Peterson,2013-11-11 Nursing, like other health-related professions, is information-intensive. The quality of care a patient receives is based on the soundness of judgment exercised by the health care team. Underlying sound judgment is up-to-date information. Unless nurses have access to accurate and pertinent information, the care being rendered will not be of the highest standard. What is required is not necessarily more rapid and efficient information services. Modern technology can process immense amounts of data in the blink of an eye. What we in the health professions need are information systems that are more intelligent, systems that can integrate information from many sources, systems that analyze and synthesize information and display it so that it may be applied directly in patient care-in other words, information that answers a question or even gives practical advice. In order to accomplish such objectives, work is needed to establish the scientific and theoretical basis for the use of computing and information systems by health professionals. This is the research component. In addition, there is the need for continued development and evaluation of practical information systems.

**Digital Twin Driven Smart Manufacturing** Fei Tao,Meng Zhang,A.Y.C. Nee,2019-02-07 Digital Twin Driven Smart Manufacturing examines the background, latest research, and application models for digital twin technology, and shows how it can be central to a smart manufacturing process. The interest in digital twin in manufacturing is driven by a need for excellent product reliability, and an overall trend towards intelligent, and connected manufacturing systems. This book provides an ideal entry point to this subject for readers in industry and academia, as it answers the questions: (a) What is a digital twin? (b) How to construct a digital twin? (c) How to use a digital twin to improve manufacturing efficiency? (d) What are the essential activities in the implementation of a digital twin? (e) What are the most important obstacles to overcome for the successful deployment of a digital twin? (f) What are the relations between digital twin and New Technologies? (g) How to combine digital twin with the New Technologies to achieve high efficiency and smartness in manufacturing? This book focuses on these problems as it aims to help readers make the best use of digital twin technology towards smart manufacturing. Analyzes the differences, synergies and possibilities for integration between digital twin technology and other technologies, such as big data, service and Internet of Things Discuss new requirements for a traditional three-dimension digital twin and proposes a methodology for a five-dimension version Investigates new models for optimized manufacturing, prognostics and health management, and cyber-physical fusion based on the digital twin

**Fundamentals of Digital Manufacturing Science** Zude Zhou,Shane (Shengquan) Xie,Dejun Chen,2011-10-22 The manufacturing industry will reap significant benefits from encouraging the development of digital manufacturing science and technology. Digital Manufacturing Science uses theorems,

illustrations and tables to introduce the definition, theory architecture, main content, and key technologies of digital manufacturing science. Readers will be able to develop an in-depth understanding of the emergence and the development, the theoretical background, and the techniques and methods of digital manufacturing science. Furthermore, they will also be able to use the basic theories and key technologies described in Digital Manufacturing Science to solve practical engineering problems in modern manufacturing processes. Digital Manufacturing Science is aimed at advanced undergraduate and postgraduate students, academic researchers and researchers in the manufacturing industry. It allows readers to integrate the theories and technologies described with their own research works, and to propose new ideas and new methods to improve the theory and application of digital manufacturing science.

**The Brand Innovation Manifesto** John Grant, 2006-05-12 The days of the image brands are over, and 'new marketing' has gone mainstream. The world's biggest companies are pursuing a post-advertising strategy, moving away from advertising and investing in leading edge alternatives. In the vanguard of the revolution has been John Grant, co-founder of the legendary agency St. Luke's and author of *The New Marketing Manifesto*, whose radical thinking has informed a generation. Now Grant is set to stun the industry again. In *The Brand Innovation Manifesto*, he redefines the nature of brands, showing why old models and scales no longer work and revealing that the key to success today is impacting people's lifestyles (think Starbucks, iPod and eBay). At the heart of the book is the concept of the 'brand molecule' to which new cultural ideas can be constantly added to keep pace with change. Cataloguing 32 classes of idea, Grant presents a practical approach to mixing and matching them within your own market to develop new brand ideas - and new ideas for existing brands.

**Building Serverless Applications with Google Cloud Run** Wietse Venema, 2020-12-02 Learn how to build a real-world serverless application in the cloud that's reliable, secure, maintainable, and scalable. If you have experience building web applications on traditional infrastructure, this hands-on guide shows you how to get started with Cloud Run, a container-based serverless product on Google Cloud. Through the course of this book, you'll learn how to deploy several example applications that highlight different parts of the serverless stack on Google Cloud. Combining practical examples with fundamentals, this book will appeal to developers who are early in their learning journey as well as experienced practitioners. Build a serverless application with Google Cloud Run Learn approaches for building containers with (and without) Docker Explore Google Cloud's managed relational database: Cloud SQL Use HTTP sessions to make every user's experience unique Explore identity and access management (IAM) on Cloud Run Provision Google Cloud resources using Terraform Learn how to handle background task scheduling on Cloud Run Move your service from Cloud Run to Knative Serving with little effort

*A Life Decoded* J. Craig Venter, 2007-10-18 The triumphant memoir of the man behind one of the greatest feats in scientific history Of all the scientific achievements of the past century, perhaps none can match the deciphering of the human genetic code, both for its technical brilliance and for its implications for our future. In *A Life Decoded*, J. Craig Venter traces his rise from an uninspired student to one of the most fascinating and controversial figures in science today. Here, Venter relates the unparalleled drama of the quest to decode the human genome—a goal he predicted he could achieve years earlier and more cheaply than the government-sponsored Human Genome Project, and one that he fulfilled in 2001. A thrilling story of detection, *A Life Decoded* is also a revealing, and often troubling, look at how science is practiced today.

**Biotechnology in Surgery** Alfonso Barbarisi, Paolo Bechi, Paolo Innocenti, Carlo A. Redi, Francesco Rosso, 2010-12-28 The 20th century has finished, the century when surgery took huge steps forward thanks to progress in technology. Now we have entered the century of biotechnologies, which will not only generate progress in surgery, but also lead to a real cultural revolution that will completely change approaches to solving different problems in medicine. The aim of this book is to bring surgeons closer to biotechnologies and to overcome the cultural gap dividing them from these new

approaches. Biotechnologies are already proposed and used at different levels in surgical practice: in diagnostic technique, enabling practitioners to identify diseases at an early stage and follow their molecular modification over time; and in tissue engineering, where the use of smart scaffolds offers a possible answer to increasing demand for biocompatible tissues and organs in transplantation surgery. This volume focuses on the emerging field of stem cells, analyzing both their role as possible players in originating and perpetuating cancer – cancer stem cells – and, conversely, their extraordinary therapeutical potential. An additional section is dedicated to the evaluation and application of derived molecular factors that can enhance the physiological processes that are fundamentally important in surgery, such as hemostasis and wound healing. Surgeons have always been technologists, in the sense that since surgery began they have always needed technology, beginning with a scalpel and surgical instruments. They have always cooperated with technologists. However, in the new century, the first one of the millennium, a rapid increase in knowledge that is outside the realm of the surgeon's traditional technological training is imposing itself – hence the aim of this book. It is now urgent to encourage surgeons to embrace this knowledge (biotechnology) with confidence. By its very nature, biotechnology is completely different from the technologies used so far, because it escapes the senses of sight and touch, which up to now have been the essence of the surgeon's work. The cellular and molecular dimensions of biotechnologies are still far removed from most of the recent advances in modern surgical techniques. A common language between surgeons and biotechnologists will create further, revolutionary, progress in surgical sciences in the twenty-first century.

*Factories of the Future* Tullio Tollo, Giacomo Copani, Walter Terkaj, 2019-02-14 This book is open access under a CC BY 4.0 license. This book presents results relevant in the manufacturing research field, that are mainly aimed at closing the gap between the academic investigation and the industrial application, in collaboration with manufacturing companies. Several hardware and software prototypes represent the key outcome of the scientific contributions that can be grouped into five main areas, representing different perspectives of the factory domain: 1) Evolutionary and reconfigurable factories to cope with dynamic production contexts characterized by evolving demand and technologies, products and processes. 2) Factories for sustainable production, asking for energy efficiency, low environmental impact products and processes, new de-production logics, sustainable logistics. 3) Factories for the People who need new kinds of interactions between production processes, machines, and human beings to offer a more comfortable and stimulating working environment. 4) Factories for customized products that will be more and more tailored to the final user's needs and sold at cost-effective prices. 5) High performance factories to yield the due production while minimizing the inefficiencies caused by failures, management problems, maintenance. This book is primarily targeted to academic researchers and industrial practitioners in the manufacturing domain.
