Animal Weapons Douglas J. Emlen, 2014-11-11 An exploration of the extreme weapons we see in the animal world—teeth, horns and claws—draws parallels to the way humans develop and employ our own weapons.

The Differences Between the Sexes R. V. Short, Evan Balaban, 1994-08-04 In most animals, from bees to bison, house flies to humans, it is possible to see at a glance whether an individual is male or female. How and why have these differences in appearance and behaviour developed and what are the nature and extent of the differences between men and women? This book reviews the latest molecular, genetic, hormonal, anatomical and behavioural data in a wide range of species in a series of lively and highly readable articles from the world's leading experts in this field. Such an overview has never before been attempted. It will have a wide appeal, especially to undergraduates and graduates in the biological and medical sciences, and will help to bridge the gap between those who study genes and molecules in the laboratory and those who study the behaviour of animals in the wild.

Exploitation, trade and farming of palm weevil grubs in Cameroon Fogoh John Muafor, Aurèle Ayemele Gnetegha, Philippe

Le Gall, Patrice Levang, 2015-06-07 The larvae (grubs) of the African palm weevil are consumed by the majority of inhabitants of the Congo Basin. These larvae are extremely rich in essential food nutrients; they contain proteins, carbohydrates, fats and energy values comparable to those of beef and fish. They are also an excellent source of a range of minerals and vitamins. The exploitation and trade of weevil grubs is an important source of income for forest dependent communities in the Congo Basin. These grubs are currently harvested from raffia and palm stems in the wild. This study evaluates the sustainability of indigenous harvesting techniques, and investigates ways in which these insect resources could be farmed in Obout and Ntoun village areas. Results show that grubs are harvested by collecting them from naturally infested raffia stems (the traditional collection method) or by cutting and preparing healthy raffia stems for grub production (the semi-farming method). Both methods are unsustainable, as thousands of raffia stems are cut down on a monthly basis. To address this situation, a grub farming system has been developed within the course of this study. It has proved to be more productive and sustainable than both the traditional collection and the semi-farming methods. This farming system could be used to produce

grubs at any time of the year, thereby providing an opportunity for year-round availability of these nutritious insects, while securing their place as an important alternative to protein and a valuable income source in Cameroon.

The Female King of Colonial Nigeria Nwando

Achebe, 2011-02-21 While providing critical perspectives on women, gender, sex and sexuality, and the colonial encounter, she considers how it was possible for this woman to take on the office and responsibilities of a traditionally male role.

The Traditional Medical Practitioner in Zimbabwe Michael Gelfand, 1985

Living with Dignity Elna Mouton, Gertrude Kapuma, Len Hansen, Thomas Togom, 2015-01-01 By addressing gender equality as a fundamental expression of human dignity and justice on our continent, this collage of ? essays [by 14 women and 6 men], is meant to serve as a concrete alternative to aspects of gender inequality ? Its format is particularly devised for use in the classroom, and for critical-constructive group engagement. It is our sincere prayer that it will also be used in imaginative ways by clergy and in congregations as a necessary part of adult learning programmes.

Darwin's Reach Norman A. Johnson, 2021 The application of evolutionary biology addresses a wide range of practical problems in medicine, agriculture, the environment, and society. Such cutting-edge applications are emerging due to recent advances in DNA sequencing, new gene editing tools, and computational methods. This book is about applied evolution - the application of the principles of and information about evolutionary biology to diverse practical matters. Although applied evolution has existed, unrecognized, for a very long time, today's version has a much wider scope. Evolutionary medicine has formed into its own discipline. Evolutionary approaches have long been employed in agriculture and in conservation biology. But Darwin's reach now extends beyond just these three fields. It now also includes forensic biology and the law. Ideas from evolutionary biology can be used to inform policy regarding foreign affairs and national security. Applied evolution is not only interdisciplinary, but also multidisciplinary. Consequently, this book is for experts in one field who are interested in expanding their evolutionary horizons. It is also for students, at the undergraduate and graduate levels. One of the public relations challenges faced by evolutionary biology is that most people do not see it being all that relevant to their daily lives.

Even many who accept evolution do not grasp how far Darwin's reach extends. This book will change that perception. Key Features: Emphasizes the expanding role evolutionary biology has in today's world. Includes examples from medicine, law, agriculture, conservation, and even national security Summarizes new technologies and computational methods that originated as innovations based in part or whole on evolutionary theory. Current. Has extensive coverage of the COVID-19 pandemic and other recent topics. Documents the important role evolution plays in everyday life. Illustrates the broadly interdisciplinary nature of evolutionary theory. Related Titles Rogers, S. O. Integrating Molecular Evolution (ISBN 9780367869526) DeSalle, R. et al. Phylogenomics: A Primer (ISBN 9780367028497) Bard, J. Evolution: The Origins and Mechanisms of Diversity (ISBN 9780367357016) The applications of evolutionary biology are far too numerous to include in just one book. Plus, new scientific findings emerge almost every day underscoring the central role evolution plays in our lives. The author has established a blog site to highlight these fascinating discoveries. Generating Diversity Michael Gillman, 2007-12-08 **Generating Diversity** deals with the enormous diversity of adaptations or organisms to common features of their environment, such as winter and the capture and processing of food. The generation of diversity is explained at a number of different levels, in particular illustrating how patterns of reproduction can alter genetic composition. An important theme is that energy and nutrients obtained by organisms can be put to a wide variety of uses, such as defence and growth. These uses are traded off against each other, helping to generate the extraordinary array of organisms on the planet.
