High Speed Catamarans and Multihulls Liang Yun, Alan Bliault, Huan Zong Rong, 2018-10-29 High speed catamaran and multihull high speed marine vessel have become very popular in the last two decades. The catamaran has become the vessel of choice for the majority of high speed ferry operators worldwide. There have been significant advances in structural materials, and structural design has been combined with higher power density and fuel efficient engines to deliver ferries of increasing size. The multihull has proven itself to be a suitable configuration for active power projection across oceans as well as for coastal patrol and protection, operating at high speed for insertion or retrieval with a low energy capability. At present there is no easily accessible material covering the combination of hydrodynamics, aerodynamics, and design issues including structures, powering and propulsion for these vehicles. Coverage in *High Speed Catamarans and Multihulls* includes an introduction to the history, evolution, and development of catamarans, followed by a theoretical calculation of wave resistance in shallow and deep water, as well as the drag components of the multihull. A discussion of vessel concept design describing design characteristics, empirical regression for determination of principal dimensions in preliminary design, general arrangement, and methods is also included. The book concludes with a discussion of experimental future vehicles currently in development including the small waterplane twin hull vessels, wave piercing catamarans, planing catamarans, tunnel planing catamarans and other multihull vessels.

The Elements of Boat Strength: For Builders, Designers, and Owners Dave Gerr, 1999-08-31 This work is significant. It is the first to include a method of assessing structural strength in the context of the modern marine environment. --Commander M. C. Cruder, U.S. Coast Guard Acclaimed author and naval architect Dave Gerr created this unique system of easy-to-use scantling rules and

rules-of-thumb for calculating the necessary dimensions, or scantlings, of hulls, decks, and other boat parts, whether built of fiberglass, wood, wood-epoxy composite, steel, or aluminum. In addition to the rules themselves, *The Elements of Boat Strength* offers their context: an in-depth, plain-English discussion of boatbuilding materials, methods, and practices that will guide you through all aspects of boat construction. Now you can avoid wading through dense technical engineering manuals or tackling advanced mathematics. *The Elements of Boat Strength* has all the formulas, tables, illustrations, and charts you need to judge how heavy each piece of your boat should be in order to last and be safe. With this book, an inexpensive scientific calculator, and a pad of paper, you'll be able to design and specify all the components necessary to build a sound, long-lasting, rugged vessel. What reviewers have said about Dave Gerr's books: *Propeller Handbook* By far the best book available on the subject.--*Sailing* The best layman's guide we've ever read.--*Practical Sailor* Dave Gerr and International Marine made a complicated topic understandable and put it into a handbook that is easy to use.--*WoodenBoat* Without doubt the definitive reference for selecting, installing, and understanding boat propellers.--*Royal Navy Sailing Association Journal* The Nature of Boats If you are not nautically obsessed before reading this book, you will most certainly be afterward.--*Sailing* Fascinating potpourri of information about today's boats, modern and traditional.--*WoodenBoat*

Drawing Futures Bob Sheil, Frédéric Migayrou, Luke Pearson, Laura Allen, 2016-11-11 *Drawing Futures* brings together international designers and artists for speculations in contemporary drawing for art and architecture. Despite numerous developments in technological manufacture and computational design that provide new grounds for designers, the act of drawing still plays a central role as a vehicle for speculation. There is a rich and long history of drawing tied to innovations in technology as well as to revolutions in our philosophical understanding of the

world. In reflection of a society now underpinned by computational networks and interfaces allowing hitherto unprecedented views of the world, the changing status of the drawing and its representation as a political act demands a platform for reflection and innovation. Drawing Futures will present a compendium of projects, writings and interviews that critically reassess the act of drawing and where its future may lie. Drawing Futures focuses on the discussion of how the field of drawing may expand synchronously alongside technological and computational developments. The book coincides with an international conference of the same name, taking place at The Bartlett School of Architecture, UCL, in November 2016. Bringing together practitioners from many creative fields, the book discusses how drawing is changing in relation to new technologies for the production and dissemination of ideas.

Secrets of Tunnel Boat Design James D. Russell, AeroMarine Research, 1982

Principles of Yacht Design Lars Larsson, Rolf Eliasson, Michal Orych, 2022-03-17 Principles of Yacht Design has established itself as the standard book on the subject for practising designers, naval architecture students, discerning boat owners as well as the boatbuilding industry as a whole. The fifth edition is completely revised and expanded. It examines every aspect of the process of yacht and powerboat design. The new edition includes new findings from recent research in aero and hydrodynamics, as well as covering the most recent changes to building standards. The authors have used a newly built 41-foot performance cruiser to demonstrate the practical application of yacht design theory. This new edition includes photos of the building process and detailed explanations.

Ship Hydrostatics and Stability Adrian Biran, Ruben Lopez Pulido, 2013-10-17 Ship Hydrostatics and Stability is a complete guide to understanding ship hydrostatics in ship design and ship performance, taking you from first principles through basic and

applied theory to contemporary mathematical techniques for hydrostatic modeling and analysis. Real life examples of the practical application of hydrostatics are used to explain the theory and calculations using MATLAB and Excel. The new edition of this established resource takes in recent developments in naval architecture, such as parametric roll, the effects of non-linear motions on stability and the influence of ship lines, along with new international stability regulations. Extensive reference to computational techniques is made throughout and downloadable MATLAB files accompany the book to support your own hydrostatic and stability calculations. The book also includes definitions and indexes in French, German, Italian and Spanish to make the material as accessible as possible for international readers. Equips naval architects with the theory and context to understand and manage ship stability from the first stages of design through to construction and use. Covers the prerequisite foundational theory, including ship dimensions and geometry, numerical integration and the calculation of heeling and righting moments. Outlines a clear approach to stability modeling and analysis using computational methods, and covers the international standards and regulations that must be kept in mind throughout design work. Includes definitions and indexes in French, German, Italian and Spanish to make the material as accessible as possible for international readers.

High Performance Marine Vessels Liang Yun, Alan Bliault, 2014-07-08 High Performance Marine Vessels (HPMV) range from the Fast Ferries to the latest high speed Navy Craft, including competition power boats and hydroplanes, hydrofoils, hovercraft, catamarans and other multi-hull craft. High Performance Marine Vessels covers the main concepts of HPMVs and discusses historical background, design features, services that have been successful and not so successful, and some sample data of the range of HPMVs to date. Included is a comparison of all HPMVs craft and the differences between them and descriptions of

performance (hydrodynamics and aerodynamics). Readers will find a comprehensive overview of the design, development and building of HPMVs.

Just One Thing John Mauldin, 2011-09-09 In *Just One Thing*, author John Mauldin offers an incomparable shortcut to prosperity: the personal guidance of an outstanding group of recognized financial experts, each offering the single most useful piece of advice garnered from years of investing. Conversational rather than technical in tone, each contributor's personal principle for success is illustrated with entertaining and illuminating real-life stories.

Senna Versus Prost Malcolm Folley, 2009-05-07 In the late eighties and early nineties, Formula One was at its most explosive, with thrilling races, charismatic drivers, nail-biting climaxes - and the most deadly rivalry ever witnessed in sport. Two of Formula One's most honoured champions and iconic figures drove together for McLaren for two seasons, and their acrimonious and hostile relationship extended even after one of them had left the team. ALAIN PROST, France's only F1 world champion, the intelligent, smooth driver with the epithet 'Le Professeur'. Ayrton Senna, the mercurial kid from a privileged background in Sao Paulo who would become the most intense and ruthless racing driver the world has ever seen. It was a story that would have a tragic ending. As the great rivals raced to victory, their relationship deteriorated badly, beginning with the breaking of a gentleman's

agreement, and public spats followed, culminating in Prost accusing Senna of deliberately trying to ride him off the circuit, and fearful that the Brazilian would get someone killed with his daring overtaking feats. And the final, sad act of this drama happened at the San Marino Grand prix at Imola in May 1994, when Senna was killed. Featuring a rare interview with Prost, and insight from Martin Brundle, Damon Hill, Sir Frank Williams, Bernie Ecclestone, Derek Warrick, Johnny Herbert, Gerhard Berger, plus McLaren insiders and other F1 figures, Malcolm Folley provides us with a breath-taking account of one of the all-time classic sporting rivalries.

The Sourcebook for Teaching Science, Grades 6-12 Norman Herr, 2008-08-11 The Sourcebook for Teaching Science is a unique, comprehensive resource designed to give middle and high school science teachers a wealth of information that will enhance any science curriculum. Filled with innovative tools, dynamic activities, and practical lesson plans that are grounded in theory, research, and national standards, the book offers both new and experienced science teachers powerful strategies and original ideas that will enhance the teaching of physics, chemistry, biology, and the earth and space sciences.

Sport, Culture and Society Grant Jarvie, 2006-04-18 This exciting, accessible introduction to the field of Sports Studies is the most comprehensive guide yet to the relationships between sport, culture and society. Taking an international perspective, Sport, Culture and Society provides students with the insight they need to think critically about the nature of sport, and includes: a clear and comprehensive structure unrivalled coverage of the history, culture, media, sociology, politics and anthropology of sport coverage of core topics and emerging areas extensive original research and new case study material. The book offers a full range of features to help guide students and lecturers, including essay topics, seminar questions, key definitions, extracts from primary sources, extensive case studies, and guides to

further reading. Sport, Culture and Society represents both an important course resource for students of sport and also sets a new agenda for the social scientific study of sport.

The Marketing of Sport John G. Beech, Simon Chadwick, 2007 This book sets an agenda for the future development of sport marketing and raises the profile of sport as a focus for academic study. The reader is also encouraged to develop a critical appreciation of this globally valuable and increasingly important sector, making it an ideal text for undergraduate and postgraduate students on sport, marketing and general business degree programmes. It includes 24 chapters contributed by leading authorities from the UK, Ireland, the US, Greece, France, New Zealand and Australia. The chapters address

important developments including sponsorship and endorsements, branding, fan behaviour, merchandising, ticketing and the globalization of sport. It has over 60 international case studies. Learning outcomes, case study questions and recommended further reading all enhance students' learning and development.

Explorer, 2021-01-28 The year is 2065. The end of Earth and all its habitants is imminent. Using the world's greatest technologies, a new generation of highly advanced, autonomous robotic vehicles is developed to explore new lands for human colonization. Inspired by legendary futurists such as Syd Mead (Blade Runner), German industrial designer and concept artist Christian Grajewski used his expert knowledge of automotive design and his fascination with animal anatomy to create fifteen stunning, interplanetary vehicles. Each varies in size and technological capabilities, yet they are unified by one overarching goal: to preserve the human race. From the stealth rotorcraft Hornet to the massive space transporter Orca, the designs of Explorer were fueled by Grajewski's deep desire to launch vehicles beyond Earth's solar system. He drew from his professional experience working on the design team at Volkswagen Design Center Potsdam, where he developed concepts for such carmakers as Lamborghini, Audi, and Porsche. Explorer compiles Grajewski's early sketches, wondrous renderings, and design reflections that together make a case for historic multinational cooperation and the incredible innovations such collaborations can achieve.

Consumer Behavior and Marketing Strategy J. Paul Peter, Jerry Corrie Olson, 1996 This work shows how the various elements of consumer analysis fit together in an integrated framework, called the Wheel of Consumer Analysis. Psychological, social and behavioural theories are shown as useful for understanding consumers and developing more effective marketing strategies. The aim is to enable students to develop skills in analyzing consumers from a marketing management perspective and in using this knowledge to develop and evaluate marketing

strategies. The text identifies three groups of concepts - affect and cognition, behaviour and the environment - and shows how these they influence each other as well as marketing strategy. The focus of the text is managerial, with a distinctive emphasis on strategic issues and problems. Cases and questions are included in each chapter.
