**Media Resistance** Trine Syvertsen,2017-04-03 This book is open access under a CC BY license. New media divide opinion; many are fascinated while others are disgusted. This book is about those who dislike, protest, and try to abstain from media, both new and old. It explains why media resistance persists and answers two questions: What is at stake for resisters and how does media resistance inspire organized action? Despite the interest in media scepticism and dislike, there seems to be no book on the market discussing media resistance as a phenomenon in its own right. This book explores resistance across media, historical periods and national borders, from early mass media to current digital media. Drawing on cases and examples from the US, Britain, Scandinavia and other countries, media resistance is discussed as a diverse phenomenon encompassing political, professional, networked and individual arguments and actions.

Postphenomenological Investigations Rosenberger,Peter-Paul Verbeek,2015-05-20 This book provides an introduction to postphenomenology, an emerging school of thought in the philosophy of technology and science and technology studies, which addresses the relationships users develop with the devices they use.

**Human-Built World** Thomas P. Hughes,2005-05-13 To most people, technology has been reduced to computers, consumer goods, and military weapons; we speak of technological progress in terms of RAM and CD-ROMs and the flatness of our television screens. In Human-Built World, thankfully, Thomas Hughes restores to technology the conceptual richness and depth it deserves by chronicling the ideas about technology expressed by influential Western thinkers who not only understood its multifaceted character but who also explored its creative potential. Hughes draws on an enormous range of literature, art, and architecture to explore what technology has brought to society and culture, and to explain how we might begin to develop an ecotechnology that works with, not against, ecological systems. From the Creator model of development of the sixteenth century to the big science of the 1940s and 1950s to the architecture of Frank Gehry, Hughes nimbly charts the myriad ways that technology has been woven into the social and cultural fabric of different eras and the promises and problems it has offered. Thomas Jefferson, for instance, optimistically hoped that technology could be combined with nature to create an Edenic environment; Lewis Mumford, two centuries later, warned of the increasing mechanization of American life. Such divergent views, Hughes shows, have existed side by side, demonstrating the fundamental idea that in its variety, technology is full of contradictions, laden with human folly, saved by occasional benign deeds, and rich with unintended consequences. In Human-Built World, he offers the highly engaging history of these contradictions, follies, and consequences, a history that resurrects technology, rightfully, as more than gadgetry; it is in fact no less than an embodiment of human values.

*Dominance by Design* Michael Adas,2009 Long before the United States became a major force in global affairs, Americans believed in their superiority over others due to their inventiveness, productivity, and economic and social well-being. U.S. expansionists assumed a mandate to civilize non-Western peoples by demanding submission to American technological prowess and design. As an integral part of America's national identity and sense of itself in the world, this civilizing mission provided the rationale to displace the Indians from much of our continent, to build an island empire in the Pacific and Caribbean, and to promote unilateral--at times military--interventionism throughout Asia. In our age of smart bombs and mobile warfare, technological aptitude remains preeminent in validating America's global mission. Michael Adas brilliantly pursues the history of this mission through America's foreign relations over nearly four centuries from North America to the Philippines, Vietnam, and the Persian Gulf. The belief that it is our right and destiny to remake foreign societies in our image has endured from the early decades of colonization to our current crusade to implant American-style democracy in the Muslim Middle East. Dominance by Design explores the critical ways in which technological superiority has undergirded the U.S.'s policies of unilateralism, preemption, and interventionism in foreign affairs and raised us from an impoverished frontier nation to a global power. Challenging the long-held assumptions and imperatives that sustain the civilizing mission, Adas gives us an essential guide to America's past and present role in the world as well as cautionary lessons for the future.

*Traffic* Marion Näser-Lather,Christoph Neubert,2015-10-14 Traffic: Media as Infrastructures and Cultural Practices presents texts by international media and cultural scholars that address the relationship between symbolic and infrastructural dimensions of media, analysing traffic in terms of media ecology, as epistemological principle, and as (trans-)formative power. Contributors are: Menahem Blondheim, Grant David Bollmer, Richard Cavell, Wolf-Dieter Ernst, Norm Friesen, Elihu Katz, Peter Krapp, Martina Leeker, Jana Mangold, John Durham Peters, Gabriele Schabacher, Michael Steppat, Wolfgang Sützl, Hartmut Winkler
