Silver by Fire, Silver by Mercury: A Chemical History of Silver Refining in New Spain and Mexico, 16th to 19th Centuries Saul Guerrero, 2017-09-11 In *Silver by Fire, Silver by Mercury: A Chemical History of Silver Refining in New Spain and Mexico, 16th to 19th Centuries*, Saul Guerrero combines historical research with geology and chemistry to refute the current prevailing narrative of a primitive effort dominated by mercury and its copious emissions to the air. Based on quantitative historical data, visual records and geochemical fundamentals, Guerrero analyses the chemical and economic reasons why two refining processes had to share production, creating along the way major innovations in the chemical recipes, milling equipment, mercury recycling practice, and industrial architecture and operations. Their main environmental impact was lead fume and the depletion of woodlands from smelting, and the transformation of mercury into calomel during the patio process.

Business Innovation and ICT Strategies Sriram Birudavolu, Biswajit Nag, 2018-11-13 This book investigates the real process of unleashing the power of Information and Communications Technology (ICT) through Open Innovation and strategic choices. It covers the most important aspects of ICT in a nutshell and details the road to the future through business innovation. ICT, of which telecom and IT constitute the core, is currently permeating and transforming every sphere of life, ranging from commerce, manufacturing, education and healthcare, to agriculture, banking, governance, media and entertainment. Today, telecommunication and ICT, in general, are essential to a country's economic development and competitiveness as recognized both by the World Bank and the Asian Development Bank. Due to the powerful, disruptive and rapid forces unleashed by ICT tsunami, organisations not only struggle to harness the potential of ICT but can also be overwhelmed by the changes, complexity, competition and regulatory environment it brings up. This book provides a clue to organisations on how to sustain and succeed by leveraging ICT in absence of extensive in-house expertise across the breadth and depth of these areas. The driving theme of the book is about opening up organizational and business models, by presenting an integrated roadmap to a future with ICT, by co-opting, cooperating and competing with other organisations. Constructing the right strategy and building the necessary social capital for open innovation through collaboration with partners, government, academia and users (Quadruple Helix Model) are essential steps in such a process.

Overcoming Ann-Marie Wilson, 2021-06-18 Three million girls across the world are at risk of female genital mutilation (FGM) each year. When Ann-Marie Wilson met a girl named Fatima in West Darfur, who had experienced FGM at the age of five and was pregnant by the age of ten, she knew she had to do something. Her life's work since then has been geared toward speaking out against FGM, as well as supporting the physical, emotional, and spiritual needs of as many survivors as possible. Built on the experience of more than 3,000 FGM survivors' stories as well as meetings with heads of state and the Pope, *Overcoming* tells the compelling story of how Ann-Marie leaned on her Christian faith through her darkest moments to build 28 Too Many. This international organisation offers hope to the millions of girls who, just like Fatima, are at risk of FGM each year.
