World Development Report 2009 World Bank, 2008-11-04 Rising densities of human settlements, migration and transport to reduce distances to market, and specialization and trade facilitated by fewer international divisions are central to economic development. The transformations along these three dimensions density, distance, and division are most noticeable in North America, Western Europe, and Japan, but countries in Asia and Eastern Europe are changing in ways similar in scope and speed. 'World Development Report 2009: Reshaping Economic Geography' concludes that these spatial transformations are essential, and should be encouraged. The conclusion is not without controversy. Slum-dwellers now number a billion, but the rush to cities continues. Globalization is believed to benefit many, but not the billion people living in lagging areas of developing nations. High poverty and mortality persist among the world's 'bottom billion', while others grow wealthier and live longer lives. Concern for these three billion often comes with the prescription that growth must be made spatially balanced. The WDR has a different message: economic growth is seldom balanced, and efforts to spread it out prematurely will jeopardize progress. The Report: documents how production becomes more concentrated spatially as economies grow. proposes economic integration as the principle for promoting successful spatial transformations. revisits the debates on urbanization, territorial development, and regional integration and shows how today's developers can reshape economic geography.

Freedom in the World 2004 Aili Piano, Arch Puddington, 2004 Freedom in the World contains both comparative ratings and written narratives and is now the standard reference work for measuring the progress and decline in political rights and civil liberties on a global basis.

Physical and Mathematical Modeling of Earth and Environment Processes Vladimir Karev, Dmitry Klimov, Konstantin Pokazeev, 2018-03-24 This book is the result of collaboration within the framework of the Third International Scientific School for Young Scientists held at the Ishlinskii Institute for Problems in Mechanics of Russian Academy of Sciences, 2017, November. The papers included describe studies on the dynamics of natural system – geosphere, hydrosphere, atmosphere—and their interactions, the human contribution to naturally occurring processes, laboratory modeling of earth and environment processes, and testing of new developed physical and mathematical models. The book particularly focuses on modeling in the field of oil and gas production as well as new alternative energy sources.

The History of Mathematics David M. Burton, 1991 This text is designed for the junior/senior mathematics major who intends to teach mathematics in high school or college. It concentrates on the history of those topics typically covered in an undergraduate curriculum or in elementary schools or high schools. At least one year of calculus is a prerequisite for this course. This book contains enough material for a 2 semester course but it is flexible enough to be used in the more common 1 semester course.

Classic Ships of Islam Dionisius A. Agius, 2008 Drawing upon Arabic literary sources, iconographic evidence and archaeological finds, this book examines trade, port towns, ship construction, seamanship, ship typology and their historical development in the Western Indian Ocean, focussing on the Medieval Islamic period but including earlier sources.

Applied Economics Thomas Sowell,2008-12-09 The application of economics to major contemporary real world problems -- housing, medical care, discrimination, the economic development of nations -- is the theme of this new book that tackles these and other issues head on in plain language, as distinguished from the usual jargon of economists. It examines economic policies not simply in terms of their immediate effects but also in terms of their later repercussions, which are often very different and longer lasting. The interplay of politics with economics is another theme of *Applied Economics*, whose examples are drawn from experiences around the world, showing how similar incentives and constraints tend to produce similar outcomes among very disparate peoples and cultures.

The Modern Middle East Ilan Pappé, 2013-09-13 This hugely successful, ground-breaking book is the first introductory textbook on the Modern Middle East to foreground the urban, rural, cultural and women's histories of the region over its political and economic history. Ilan Pappé begins his narrative at the end of the First World War with the Ottoman heritage, and concludes at the present day with the political discourse of Islam. Providing full geographical coverage of the region, The Modern Middle East: opens with a carefully argued introduction which outlines the methodology used in the textbook provides a thematic and comparative approach to the region, helping students to see the peoples of the Middle East and the developments that affect their lives as part of a larger world includes insights gained from new historiographical trends and a critical approach to conventional state- and nation-centred historiographies includes case studies, debates, maps, photos, an up-to-date bibliography and a glossarial index. This second edition has been brought right up to date with recent events, and includes a new chapter on the media revolution and the effect of media globalization on the Middle East, and a revised and expanded discussion on modern Iranian history.

The Myth of the Holy Cow D. N. Jha, 2020-05-05 Hugely controversial upon its publication in India, this book has already been banned by the Hyderabad Civil Court and the author's life has been threatened. Jha argues against the historical sanctity of the cow in India, in an illuminating response to the prevailing attitudes about beef that have been fiercely supported by the current Hindu right-wing government and the fundamentalist groups backing it.

Planetary Geology Claudio Vita-Finzi, Dominic Fortes, 2014 Recent planetary missions by NASA, the European Space Agency, and other national agencies have reaffirmed that the geological processes which are familiar from our studies of Earth also operate on many solid planets and satellites. Common threads link the internal structure, thermal evolution, and surface character of both rocky and icy worlds. Volcanoes, impact craters, ice caps, dunes, rift valleys, rivers, and oceans are features of extra-terrestrial worlds as diverse as Mercury and Titan. The new data reveal that many of the supposedly inert planetary bodies were recently subject to earthquakes, landslides, and climate change and that some of them display active volcanism. Moreover, our understanding of the very origins of the solar system depends heavily on the composition of meteorites from Mars reaching the Earth and of rock fragments found on the Moon. Planetary Geology provides the student reader and enthusiastic amateur with comprehensive coverage of the solar system viewed

through the eyes of Earth scientists. Combining extensive use of imagery, the results of laboratory experiments, and theoretical modeling, this comprehensively updated second edition (previously published in paperback and now available in hardback) presents fresh evidence that, to quote the first edition, planetary geology now embraces conventional geology and vice versa. *** . . . a much improved version of what was already a good book. The new text is some 20 percent longer . . . color illustrations have been dispersed throughout . . . and the information presented is brought right up to the minute with numerous injections of new scientific results from the many space missions that have been conducted since the first edition appeared.
