Aerodynamics of V/STOL Flight Barnes Warnock McCormick,1999-01-01 An extremely practical overview of V/STOL (vertical/short takeoff and landing) aerodynamics, this volume offers a presentation of general theoretical and applied aerodynamic principles, covering propeller and helicopter rotor theory for both the static and forward flight cases. Both a text for students and a reference for professionals, the book can be used for advanced undergraduate or graduate courses. Numerous detailed figures, plus exercises. 1967 edition. Preface. Appendix. Index.

Lightning Protection of Aircraft Franklin Fisher,J. Plumer,2012-07-13 This book is an attempt to present under one cover the current state of knowledge concerning the potential lightning effects on aircraft and that means that are available to designers and operators to protect against these effects. The impetus for writing this book springs from two sources- the increased use of nonmetallic materials in the structure of aircraft and the constant trend toward using electronic equipment to handle flight-critical control and navigation function.

Aircraft Performance & Design John David Anderson,1999 Balancing technical material with important historical aspects of the invention and design of aeroplanes, this book develops aircraft performance techniques from first principles and applies them to real aeroplanes.

Aircraft Structures for Engineering Students Thomas Henry Gordon Megson,1990 This book provides a self-contained course in aircraft structures which contains not only the fundamentals of elasticity and aircraft structural analysis but also the associated topics of airworthiness and aeroelasticity.

Flight Dynamics Principles Michael V. Cook,2012-10-03 The study of flight dynamics requires a thorough understanding of the theory of the stability and control of aircraft, an appreciation of flight control systems and a grounding in the theory of automatic control. Flight Dynamics Principles is a student focused text and provides easy access to all three topics in an integrated modern systems context. Written for those coming to the subject for the first time, the book provides a secure foundation from which to move on to more advanced topics such as, non-linear flight dynamics, flight simulation, handling qualities and advanced flight control. New to this edition: Additional examples to illustrate the application of computational procedures using tools such as MATLAB®, MathCad® and Program CC® Improved compatibility with, and more expansive coverage of the North American notational style Expanded coverage of lateral-directional static stability, manoeuvrability, command augmentation and flight in turbulence An additional coursework study on flight control design for an unmanned air vehicle (UAV)

Airmobility 1961-1971 Ltj John J. Tolson,2011-09-26 This is the exciting story of the development of U.S. airmobile power from theory to practice, involving air transport, fixed wing aircraft, and attack helicopters culminating in Vietnam War operations. It includes analysis of airmobile combat operations; doctrinal and interservice disputes; equipment descriptions; and the organization of combat and support units. It also includes data about airmobility in South Vietnam's army and it features personal reflections of the author, who was at the center of airmobility development and who commanded large airmobile units. John J. Tolson in June 1939 participated in the first tactical air movement of ground forces by the U.S. Army. He was in all combat jumps of the 503d Parachute Infantry Regiment during World War II, became an Army aviator in 1957, and served as Director of Army Aviation and Commandant of the Army Aviation School. From April 1967 to July 1968 he commanded the 1st Cavalry Division (Airmobile), Vietnam. (Includes many maps and photographs)

Free Culture Lawrence Lessig,2015-11-13 How big media uses technology and the law to lock down culture and control creativity. Free Culture is an entertaining and important look at the past and future of the cold war between the media industry and new technologies. - Marc Andreessen, cofounder of Netscape. Free Culture goes beyond illuminating the catastrophe to our culture of increasing regulation to show examples of how we can make a different future. These new-style heroes and examples are rooted in the traditions of the founding fathers in ways that seem obvious after reading this book. Recommended reading to those trying to unravel the shrill hype around 'intellectual property.' - Brewster Kahle, founder of the Internet Archive. Synthesis of Subsonic Airplane Design E. Torenbeek,2013-06-29 Since the education of aeronautical engineers at Delft University of Technology started in 1940 under the inspiring leadership of Professor H.J. van der Maas, much emphasis has been placed on the design of aircraft as part of the student's curriculum. Not only is aircraft design an optional subject for thesis work, but every aeronautical student has to carry out a preliminary airplane design in the course of his study. The main purpose of this preliminary design work is to enable the student to synthesize the knowledge obtained separately in courses on aerodynamics, aircraft performances, stability and control, aircraft structures, etc. The student's exercises in preliminary design have been directed through the years by a number of staff members of the Department of Aerospace Engineering in Delft. The author of this book, Mr. E. Torenbeek, has made a large contribution to this part of the study programme for many years. Not only has he acquired vast experience in teaching airplane design at university level, but he has also been deeply involved in design-oriented research, e.g. developing rational design methods and systematizing design information. I am very pleased that this wealth of experience, methods and data is now presented in this book.

V/STOL Dynamics, Control, and Flying Qualities James A. Franklin,2000 This publication presents materials that constituted the lectures presented by the author as part of Course AA 234 Dynamics, Control, and Flying Qualities of V/STOL Aircraft that was taught in the Department of Aeronautics and Astronautics at Stanford University. It covers representative operations of vertical and short takeoff and landing (V/STOL) aircraft, a discussion of the pilot's strategy in controlling these aircraft, the equations of motion pertinent to V/STOL tasks, and their application in the analysis of longitudinal and lateral-directional control in hover and forward flight. Following that development, which applies to the characteristics of the basic airframe and propulsion system, the text concludes with a discussion of the contributions of control augmentation in specific flight tasks and of the integration of modern electronic displays with these controls.

Marine Corps Aviation Edward C. Johnson,Usmc Lieutenant Colonel Edward Johnson,Graham A. Cosmas,2014-06-18 This brief history of Marine aviation from 1912 to 1940 describes the efforts of Marines to secure their own air arm and recounts the early development of the Marine air-ground team. The story is drawn from official reports, documents, and personal correspondence, as well as from published historical works. It also draws heavily upon the transcribed reminiscences of notable Marine aviators collected and preserved by the Oral History Section of the History and Museums Division. From 1912, when First Lieutenant Alfred A. Cunningham became the first Marine to fly, through 1940, a handful of dedicated Marines worked to keep their Corps abreast of the progress of military aviation and to create an air arm specifically dedicated to supporting Marines in their amphibious mission. From a few daring men and a handful of primitive aircraft in 1912, Marine aviation grew into a force which met the test of combat in World War I. During the 1920s and 1930s, Marine aviators gradually developed a permanent organization and acquired aircraft of increasing reliability and improving performance. In small wars and expeditions in Haiti, the Dominican Republic, Nicaragua, and China, Marine fliers devised new techniques for supporting Marine infantry in combat, and they demonstrated the value of aviation in reconnaissance and in the movement of men and supplies over rough and usually roadless terrain. With the creation of the Fleet Marine Force in 1933, Marine aviation received formal recognition as an element of the amphibious air-ground team, and in the fleet landing exercises of the late 1930s began developing the doctrines and tactics which would make

close air support a reality in World War II. The traditions of excellence and versatility established by these early Marine fliers lived on in the skies of Korea and Vietnam and remain vital today. This study of the formative years of Marine aviation is based on official reports and documents in the archives and holdings of the History and Museums Division and on personal memoirs and correspondence, as well as published historical works. It draws heavily on the writings of such pioneers of Marine aviation history as Robert L. Sherrod and Major Edna Loftus Smith, USMCR, and has benefited significantly from the efforts of such organizations as the First Marine Aviation Force Association and the Marine Corps Aviation Association to preserve the memory and record of early Marine aviation.
