The Delft Systems Approach Hans P. M. Veeke, Jaap A. Ottjes, Gabriel Lodewijks, 2008-05-23 The pace of development in knowledge and know-how in the Organisation Sciences, Logistics and Information Technology is rapid. However, the gap between those who practice these sciences and the practicing manager is becoming larger rather than smaller. The Delft Systems Approach describes a fundamental approach for analysing industrial systems, which emphasizes a concept that can be used by all disciplines involved. It sets out to close the gap between theory and practice.

Fire on the Water Robert Haddick, 2014-09-15 The main theme of *Fire on the Water* is that conventional measures of military balance, employed by both the general public and many policy experts, underestimate the threat that China's military modernization poses to the U.S. position in the Asia-Pacific region. Within a decade, China's leaders will have the military power to hold at risk U.S. interest in East Asia. The U.S. needs to fashion a new and competitive strategy, one that better matches the strengths of the U.S. and its allies against China's vulnerabilities, in order to maintain a balance of power in the region and convince China's leaders to pursue a cooperative course. It is not obvious to many observers why a conflict in the region is plausible, or why the U.S. should bear the responsibility for maintaining a forward military presence in the region. China has rapidly emerged

as a great power and by doing so, has acquired many vital interests around the world. Following the pattern set by other such episodes in history, China is also acquiring the military means to protect its new interests, a development that puts at risk the interests of China's neighbors and the United States. The U.S. forward military presence in the region is an increasingly difficult burden to sustain. But in the long run, this approach will be less costly and less risky than encouraging China's neighbors to balance China by themselves, an alternative that will very likely result in an unstable arms race and a conflict that will damage America's interests. While it will be in America's interest to maintain its position in the Asia-Pacific region, China's military modernization is making it much more difficult for the U.S. to do so. China's military strategy, centered on its rapidly-expanding land-based and anti-ship missile forces, is exploiting weaknesses in long-standing U.S. force structure and doctrine. Due to a variety of institutional barriers, the U.S. has been slow to adapt to China's military modernization. Current efforts to respond are impractical, in that they expend U.S. resources against China's strengths rather than its vulnerabilities. The U.S. needs a new and competitive strategy that will strengthen its alliances in the region and convince China's leaders that cooperation, rather than military expansion and an attempt at regional hegemony, will be China's best course. Fire on the Water proposes reforms to U.S. diplomacy, military programs, and strategy that will offer a better

chance at preserving stability. The goal of these reforms is to thwart China's well-designed military modernization plan, bolster the confidence and credibility of U.S. alliances in the region, and thus persuade China's leaders that China's best course is cooperation rather than conflict, the outcome that has usually occurred in history when a new great power has rapidly emerged.

The Disappearing Spoon Sam Kean,2010-07-12 From New York Times bestselling author Sam Kean comes incredible stories of science, history, finance, mythology, the arts, medicine, and more, as told by the Periodic Table. Why did Gandhi hate iodine (I, 53)? How did radium (Ra, 88) nearly ruin Marie Curie's reputation? And why is gallium (Ga, 31) the go-to element for laboratory pranksters?* The Periodic Table is a crowning scientific achievement, but it's also a treasure trove of adventure, betrayal, and obsession. These fascinating tales follow every element on the table as they play out their parts in human history, and in the lives of the (frequently) mad scientists who discovered them. THE DISAPPEARING SPOON masterfully fuses science with the classic lore of invention, investigation, and discovery--from the Big Bang through the end of time. *Though solid at room temperature, gallium is a moldable metal that melts at 84 degrees Fahrenheit. A classic science prank is to mold gallium spoons, serve them with tea, and watch guests recoil as their utensils disappear.

Strategic Management of Marine Ecosystems Eugene Levner, Igor Linkov, Jean-Marie Proth, 2006-03-30 The demand for advanced management methods and tools for marine ecosystems is increasing worldwide. Today, many marine ecosystems are significantly affected by disastrous pollution from industrial, agricultural, municipal, transportational, and other anthropogenic sources. The issues of environmental integrity are especially acute in the Mediterranean and Red Sea basins, the cradle of modern civilization. The drying of the Dead Sea is one of the most vivid examples of environmental disintegration with severe negative consequences on the ecology, industry, and wildlife in the area. Strategic management and coordination of international remedial and restoration efforts is required to improve environmental conditions of marine ecosystems in the Middle East as well as in other areas. The NATO Advanced Study Institute (ASI) held in Nice in October 2003 was designed to: (1) provide a discussion forum for the latest developments in the field of environmentally-conscious strategic management of marine environments, and (2) integrate expertise of ecologists, biologists, economists, and managers from European, American, Canadian, Russian, and Israeli organizations in developing a framework for strategic management of marine ecosystems. The ASI addressed the following issues: Key environmental management problems in exploited marine ecosystems; Measuring and monitoring of municipal, industrial, and agricultural effluents;

Global contamination of seawaters and required remedial efforts; Supply Chain Management approach for strategic coastal zones management and planning; Development of environmentally friendly technologies for coastal zone development; Modeling for sustainable aquaculture; and Social, political, and economic challenges in marine ecosystem management.

The Arctic and World Order Kristina Spohr, Daniel S. Hamilton, Jason C. Moyer, 2021-01-26 The Arctic, long described as the world's last frontier, is quickly becoming our first frontier—the front line in a world of more diffuse power, sharper geopolitical competition, and deepening interdependencies between people and nature. A space of often-bitter cold, the Arctic is the fastest-warming place on earth. It is humanity's canary in the coal mine—an early warning sign of the world's climate crisis. The Arctic “regime” has pioneered many innovative means of governance among often-contentious state and non-state actors. Instead of being the “last white dot on the map,” the Arctic is where the contours of our rapidly evolving world may first be glimpsed. In this book, scholars and practitioners—from Anchorage to Moscow, from Nuuk to Hong Kong—explore the huge political, legal, social, economic, geostrategic and environmental challenges confronting the Arctic regime, and what this means for the future of world order.

Ocean Noise and Marine Mammals National Research Council, Division on Earth and Life Studies, Ocean Studies Board, Committee on Potential Impacts of Ambient Noise in the Ocean on Marine

Mammals,2003-05-22 For the 119 species of marine mammals, as well as for some other aquatic animals, sound is the primary means of learning about the environment and of communicating, navigating, and foraging. The possibility that human-generated noise could harm marine mammals or significantly interfere with their normal activities is an issue of increasing concern. Noise and its potential impacts have been regulated since the passage of the Marine Mammal Protection Act of 1972. Public awareness of the issue escalated in 1990s when researchers began using high-intensity sound to measure ocean climate changes. More recently, the stranding of beaked whales in proximity to Navy sonar use has again put the issue in the spotlight. Ocean Noise and Marine Mammals reviews sources of noise in the ocean environment, what is known of the responses of marine mammals to acoustic disturbance, and what models exist for describing ocean noise and marine mammal responses. Recommendations are made for future data gathering efforts, studies of marine mammal behavior and physiology, and modeling efforts necessary to determine what the long- and short-term impacts of ocean noise on marine mammals.

The Floating Pool Lady Ann L.

Buttenwieser,2021-05-15 Why on earth would anyone want to float a pool up the Atlantic coastline to bring it to rest at a pier on the New York City waterfront? In The Floating Pool Lady, Ann L. Buttenwieser recounts her triumphant adventure that started in the bayous of Louisiana and ended with a self-sustaining, floating swimming pool

moored in New York Harbor. When Buttenwieser decided something needed to be done to help revitalize the New York City waterfront, she reached into the city's nineteenth-century past for inspiration. Buttenwieser wanted New Yorkers to reestablish their connection to their riverine surroundings and she was energized by the prospect of city youth returning to the Hudson and East Rivers. What she didn't suspect was that outfitting and donating a swimming facility for free enjoyment by the public would turn into an almost-Sisyphean task. As she describes in *The Floating Pool Lady*, Buttenwieser battled for years with politicians and struggled with bureaucrats as she brought her crazy scheme to fruition. From dusty archives in the historic Battery Maritime Building to high-stakes community board meetings to tense negotiations in the Louisiana shipyard, Buttenwieser retells the improbable process that led to a pool named *The Floating Pool Lady* tying up to a pier at Barretto Point Park in the Bronx, ready for summer swimmers. Throughout *The Floating Pool Lady*, Buttenwieser raises consciousness about persistent environmental issues and the challenges of developing a constituency for projects to make cities livable in the twenty-first century. Her story and that of her floating pool function as both warning and inspiration to those who dare to dream of realizing innovative public projects in the modern urban landscape.

The Idea Factory Jon Gertner, 2012-03-15 The definitive history of America's greatest incubator

of innovation and the birthplace of some of the 20th century's most influential technologies "Filled with colorful characters and inspiring lessons . . . The Idea Factory explores one of the most critical issues of our time: What causes innovation?" –Walter Isaacson, The New York Times Book Review "Compelling . . . Gertner's book offers fascinating evidence for those seeking to understand how a society should best invest its research resources." –The Wall Street Journal From its beginnings in the 1920s until its demise in the 1980s, Bell Labs-officially, the research and development wing of AT&T-was the biggest, and arguably the best, laboratory for new ideas in the world. From the transistor to the laser, from digital communications to cellular telephony, it's hard to find an aspect of modern life that hasn't been touched by Bell Labs. In The Idea Factory, Jon Gertner traces the origins of some of the twentieth century's most important inventions and delivers a riveting and heretofore untold chapter of American history. At its heart this is a story about the life and work of a small group of brilliant and eccentric men-Mervin Kelly, Bill Shockley, Claude Shannon, John Pierce, and Bill Baker-who spent their careers at Bell Labs. Today, when the drive to invent has become a mantra, Bell Labs offers us a way to enrich our understanding of the challenges and solutions to technological innovation. Here, after all, was where the foundational ideas on the management of innovation were born.

Section D for Destruction Malcolm

Atkin, 2017-11-30 When Neville Chamberlain made his

famous Peace in Our Time statement in 1938, after the Munich Agreement with Hitler, he may, or may not, have been aware that the new Section D of the Secret Intelligence Service was already making plans to mount an all-out political and sabotage war against Nazi Germany. This was a new form of warfare, encompassing bribery, black propaganda and sabotage by agents described as having no morals or scruples. To the horror of many, it disregarded the conventions of neutrality and was prepared to hit the Nazi state wherever it could do most damage. Malcolm Atkin reveals how Section D's struggle to build a European wide anti-Nazi resistance movement was met with widespread suspicion from government, to the extent of a systematic destruction of its reputation. It was, however, a key pioneer of irregular warfare that led to the formation of the famous Special Operations Executive (SOE). His study is the first in-depth account of it to be published since the release of previously secret documents to the National Archives.

Ocean Reverberation Dale D. Ellis, John R. Preston, H.G. Urban, 2012-12-06 During the past decade there has been a renewed interest in active sonar systems at both low and medium frequencies. More recently this interest has been extended to very high frequencies in shallow water. Reverberation often limits the detection performance of these systems, and there is a need to understand the underlying mechanisms that cause the scattering. With more emphasis being given to reverberation phenomena in the Scientific Program of Work at the SACLANT Undersea Research Centre,

it was considered an opportune time to host a meeting, bringing together scientists from NATO countries to foster cross-disciplinary dialogue and generate ideas for new research directions. Consequently the Ocean Reverberation Symposium was held 25-29 May 1992 in La Spezia, Italy. Over 60 presentations were made on a diverse selection of topics, of which ten papers will be published as a SACLANTCEN Conference Proceedings. The papers in this volume are grouped into 8 sections, usually in the same order as presented at the corresponding session of the Symposium: Section 1 - Scattering Mechanisms Section 2 - High Frequency Measurements and Mechanisms Section 3 - Reverberation Modelling Section 4 - ARSRP Mid-Atlantic Ridge Experiment Section 5 - Low Frequency Measurements Section 6 - Volume Scattering Section 7 - Signal Processing Issues Section 8 - Applications Taken together the papers show some emerging trends in the research.

Navies and Foreign Policy (Routledge Revivals)

Ken Booth, 2014-06-27 First published in 1977, this study offers a comprehensive, systematic and integrated survey of the important relationship between navies and the making and execution of foreign policy. Ken Booth explains the functions navies can perform in both war and peace, the influence they have on particular situations, and how the relevant organisations can affect the character of naval actions. Ultimately, navies are regarded as indispensable instruments of the state by a number of countries, whilst all countries with a coast find some need to threaten a degree

of force at sea. This book provides students and academics with the intellectual framework with which to assess the changing character of the navy.

Marine Mammal Ecology and Conservation Ian L. Boyd, W. Don Bowen, Sara J. Iverson, 2010-08-12 Much of our knowledge about marine mammals is derived from a long-term and dedicated research effort that is evolving rapidly due to the introduction and invention of new methods. This book reflects the inventiveness of marine researchers as they try to find ways around the problems presented to them by these unusual and challenging animals.
