Applications of Flow in Human Development and Education Mihaly

Csikszentmihalyi, 2014-08-08 The third volume of the collected works of Mihaly Csikszentmihalyi covers his work on the application of flow in areas that go beyond the field of leisure where the concept was first applied. Based on his personal experience with schooling and learning, as well as that of many others and contrary to what Cicero claimed, Csikszentmihalyi arrived at the conclusion that instead of taking pride in making the roots of knowledge as bitter as possible, we should try to make them sweeter. Just as flow became a popular and useful concept in voluntary activities, it could likewise be applied in education with the end result of young people being more likely to continue learning not just because they have to but because they want to. This volume brings together a number of articles in which Csikszentmihalyi develops ideas about how to make education and more generally the process of learning to live a good life, more enjoyable. Since theory is the mother of good practice, the first eleven chapters are devoted to theoretical reflections. Some are general and explore what it means to be a human being,

what it means to be a person, when we look at life from the perspective of flow. Others are more narrowly focused on such topics as consumption, education, teaching and learning. They help laypeople reflect how they can arrange their lives in such a way as to leave a small ecological footprint while getting the most enjoyment. The second section of the volume contains a dozen empirical articles on similar topics. They deal with the development of identity and self-worth; with the formation of goals and motivation; with loneliness and family life.

RAF Wings over Florida Will Largent, 2020-08-01 From 1941 through 1945, British cadets in the Royal Air Force trained in the United States through the Lend-Lease Act, President Roosevelt's ingenious plan to help beleaguered Great Britain while maintaining the semblance of neutrality. This book tells the saga of two Florida training fields during this turbulent time. In their own words, British pilots tell of their Florida experiences. Many of them still in their late teens, away from home for the first time, pale and thin from years of rationing, these young men encountered immense challenges and overwhelming generosity during their training in Florida. Now retired, these former pilots still smell the scent of orange blossoms when they glance through the log books they kept while flying their Stearmans and Harvards over Florida citrus groves. They fondly remember the times when they buzzed over the homes of their Florida "families" to let them know to expect them for Sunday dinner. More than fifty years later, their stories still resonate with universal emotions: fear of failure, love of country, camaraderie, romantic love, and the pain of tragic deaths. Their stories also remind the American reader of a unique time in our history, when, poised on the brink of war, the United States reached out to help a country in distress.

Information Arts Stephen Wilson, 2003-02-28 An introduction to the work and ideas of artists who use—and even influence—science and technology. A new breed of contemporary artist engages science and technology—not just to adopt the vocabulary and gizmos, but to explore and comment on the content, agendas, and possibilities. Indeed, proposes Stephen Wilson, the role of the artist is not only to interpret and to spread scientific knowledge, but to be an active partner in determining the direction of research. Years ago, C. P. Snow wrote about the two cultures of science and the humanities; these developments may finally help to change the outlook of those who view science and technology as separate from the general culture. In this rich compendium, Wilson offers the first comprehensive survey of international artists who incorporate concepts and research from mathematics, the physical sciences, biology, kinetics, telecommunications, and experimental digital systems such as artificial intelligence and ubiquitous computing. In addition to visual documentation and statements by the artists, Wilson examines relevant art-theoretical writings and explores emerging scientific and technological research likely to be culturally significant in the future. He also provides lists of resources including organizations, publications, conferences, museums, research centers, and Web sites.

Voices of a People's History of the United States Howard Zinn, Anthony Arnove, 2011-01-04 Here in their own words are Frederick Douglass, George Jackson, Chief Joseph, Martin Luther King Jr., Plough Jogger, Sacco and Vanzetti, Patti Smith, Bruce Springsteen, Mark Twain, and Malcolm X, to name just a few of the hundreds of voices that appear in *Voices of a People's History of the United States*, edited by Howard Zinn and Anthony Arnove. Paralleling the twenty-four chapters of Zinn's *A People's History of the United States*, *Voices of a People's History* is the long-awaited companion volume to the national bestseller. For *Voices*, Zinn and Arnove have selected testimonies to living history--speeches, letters, poems, songs--left by the people who make history happen but who usually are left out of history books--women, workers, nonwhites. Zinn has written short introductions to the texts, which range in length from letters or poems of less than a page to entire speeches and essays that run several pages. *Voices of a People's History* is a symphony of our nation's original voices, rich in ideas and actions, the embodiment of the power of civil disobedience and dissent wherein lies our nation's true spirit of defiance and resilience.

On the Short Waves, 1923-1945 Jerome S. Berg, 2007-03-28 As radio developed in the early 1920s, the focus for most people was the AM band and stations such as KDKA, the first broadcast station. There was, however, another broadcast method that was popular among many early enthusiasts--shortwave radio. As is true today, the transmission of news and entertainment programs over shortwave frequencies permitted reception over great distances. For many in America and beyond, shortwave was an exciting aspect of the new medium. Some still tune the shortwave bands to enjoy the programming. Others pursue broadcasts for the thrill of the hunt. This book fully covers shortwave broadcasting from its beginning through World War II. A technical history examining the medium's development and use tells the story of a listener

community that spanned the globe. Included are overviews of the primary shortwave stations operating worldwide in the 1930s, along with clubs and competitions, publications and prizes. A rich collection of illustrations includes many QSLs, the cards that stations sent to acknowledge receipt of their transmissions and that are much prized by long-distance collectors.

Water+Ink Coloring Book Winter 2020 Kim Winberry, 2019-07-22 I begin my paintings with a sketch and application of colorful/bright pigment and water to the paper. I disrupt the blends with salt or water, watching as one color blossoms in water, as another color starts to travel across the paper. I utilize India Ink to demarcate changes, also adding add swirls other artifacts, in the aim to achieve whimsy. My coloring books are my paintings! I run the paintings through filters and drop the color from them, leaving the lines so that you can add your own color. But wait, there's more... I've

added an Augmented Reality component to this. Wonder what colors I used for that piece in the corner there? Take out your phone, download the Zappar app from your app store and zap the code. What happens? At the very least an image of the original painting will pop up and you can see what it looks like, side by side with the coloring page. Beyond that, you'll meet Mist, my liaison to the AR world. She will be a recurring character in all my AR work. Stay tuned and enjoy.
