Million Dollar Data: Building Confidence – Vol.1 Stephen DeMeo, 2020-07-31
Global warming, our current and greatest challenge, is without precedent. Among the many consequences that are impacting our society, one unanticipated concern involves scientific truth. When the President of the United States, and others in his administration, declare that global warming is fake science, it calls into question what real science is and what real school science should be. I will argue that real science is quality science, one that is based on the rigorous collection of reliable and valid data. To collect quality data requires bending over backwards to get things right, and this is exactly what makes science so special. Truth is made when scientists go this extra yard and devise controlled experiments, collect large data sets, confirm the data, and rationally analyze their results. Making scientific truth sounds difficult to do in the science laboratory, but in reality, there are many straightforward ways that truth can be constructed. In the first of two volumes, I discuss twelve such ways – I call them Confidence Indicators – that can allow students to strongly believe in their data and their subsequent results. Many of these methods are intuitive and can be used by young students on the late elementary level all the way up to those taking introductory college science courses. As in life, science is not without doubt. In the second volume I introduce the concept of scientific uncertainty and the indicators used to calculate its magnitude. I will show that science is about connecting confidence with uncertainty in a specific manner, what I refer to as the Confidence-Uncertainty Continuum expression. This important relationship epitomizes the scientific enterprise as a search for probabilistic rather than absolute truth. This two-volume set will contain a variety of ways that data quality can be instituted into a science curriculum. To support its use, many of the examples that I will present involve science teachers as well as student work and feedback from different grade levels and in different scientific disciplines. Specific chapters will be devoted to reviewing the academic literature on data quality as well as describing my own personal research on this important but often neglected topic.

Art & Science J. Paul Getty Museum, 2013-07-23 For the first time, the award-winning Education Department of the J. Paul Getty Museum is making one of its much-lauded K–12 curricula available nationwide in an attractive and inexpensive print format. Art & Science was developed by the Getty's expert educators, scientists, curators, and conservators, and tested by classroom teachers, and it connects to national and California state standards. Teachers and parents will find engaging lessons and activities divided into beginning, intermediate, and advanced levels for step-by-step learning. Art & Science mines the treasures of the Getty Museum to explore the many intersections of the visual arts with scientific disciplines. Full-color images of antiquities, decorative arts, drawings, manuscripts, painting, photography, and sculpture illuminate lesson plans about, for example: • The laws of physics that keep a bronze sculpture of a juggler from tipping over • The science that allows photographers to manipulate light and capture images on paper • The processes of radiation and convection that turn clay into porcelain • Scientific observation of the natural world as the subject for art • How scientists removed 2,000 years of oxidation and encrustation to

reveal a priceless ancient sculpture The curriculum also contains a trove of resources, including handouts, "Questions for Teaching," a timeline, glossary, and list of print and web sources for further research. There are also links to additional related lessons and images available on the Getty website. The full-page color images and special "lay flat" binding of Art & Science make it ideal for use with a digital document reader.

Home Activity Lab Robert Winston,2024-01-16 Dive into science with these fun and simple experiments for children to do at home. This fun, activity-filled book is brimming with home experiments to help budding scientists aged 8-14 explore different projects. Using household items, combine science with art and craft, and make an erupting volcano, design rubber band planets, sail a soap-powered boat, and race car balloons. Packed with photography, easy-to-follow instructions, and attention to detail, Home Activity Lab will excite young scientists from the get-go! Each of the super-fun make-and-do projects in this book comes with simple step-by-step photographs and instructions that will inspire children's imagination and teach STEM topics. This children's craft book on space offers: - 28 hands-on projects that appeals to kids aged 8-14. - Materials easily found around the home with no specialist equipment needed. - Information boxes full of fascinating facts and panel stories that

explain the science throughout the book. - A clear explanation how STEM is involved in creating the project or the results of the experiment. Ideal for kids who are interested in STEM, Home Activity Lab features a collection of science projects with easy-to-follow instructions and everyday ingredients that can be found around the house. Each experiment describes the science behind the project, highlighting STEM facts with STEM icons pointing out the key science, technology, engineering, and maths learning involved in each one. More in the series The Activity Lab series inspires children to get hands-on with learning by creating exciting STEM projects in their favorite subject. If you liked Home Activity Lab, then why not try Dinosaur Activity Lab for budding paleontologists, Cardboard Activity Lab for eco-friendly recycling fun, Space Activity Lab for aspiring astrologists, or Great STEM Projects experiments for all budding scientists?

Nuclear Science Abstracts ,1975 NSA is a comprehensive collection of international nuclear science and technology literature for the period 1948 through 1976, pre-dating the prestigious INIS database, which began in 1970. NSA existed as a printed product (Volumes 1-33) initially, created by DOE's predecessor, the U.S. Atomic Energy Commission (AEC). NSA includes citations to scientific and technical reports from the AEC, the U.S. Energy Research and Development Administration and its contractors, plus other agencies and international organizations, universities, and industrial and research organizations. References to books, conference proceedings, papers, patents, dissertations, engineering drawings, and journal articles from worldwide sources are also included. Abstracts and full text are provided if available.
