Genesis Mishap Investigation Board Report National Aeronautics and Space Administration, 2012-11-08 Genesis was one of NASA's Discovery missions, and its purpose was to collect samples of solar wind and return them to Earth. The Jet Propulsion Laboratory was the managing Center; the California Institute of Technology was designated the principal investigator and project team leader. Los Alamos National Laboratory provided the science instruments, and Lockheed Martin Corporation (acting through its Lockheed Martin Space Systems company) was the industrial partner and provided the spacecraft and sample return capsule. The Jet Propulsion Laboratory and Lockheed Martin Astronautics conducted mission operations. Launched on August 8, 2001, Genesis was to provide fundamental data to help scientists understand the formation of our solar system. Analysis of solar materials collected and returned to Earth will give precise data on the chemical and isotopic composition of the solar wind. On September 8, 2004 the Genesis sample return capsule drogue parachute did not deploy during entry, descent, and landing operations over the Utah Test and Training Range. The drogue parachute was intended to slow the capsule and provide stability during transonic flight. After the point of expected drogue deployment, the sample return capsule began to tumble and impacted the Test Range at 9:58:52 MDT, at which point vehicle safing and recovery operations began. On September 10, 2004, the Associate Administrator for the Science Mission Directorate established a Type A Mishap Investigation Board as defined by NASA Procedural Requirements 8621.1A, NASA Procedural Requirements for Mishap Reporting, Investigating, and Recordkeeping, to determine the cause and potential lessons from the incident. The Board was chartered to determine the proximate cause of the failure, identify the root causes, and develop recommendations to strengthen processes within NASA's Science Mission Directorate to avoid similar incidents in the future. Additionally, the Board was to determine the adequacy of contingency response planning and the appropriateness of the actual contingency response, to include the safing and securing of the spacecraft and the science payload, and the protection of response personnel. The Board determined the proximate (or direct) cause of the mishap to be that the G-switch sensors were in an inverted orientation, per an erroneous design, and were unable to sense sample return capsule deceleration during atmospheric entry and initiate parachute deployments. The Board found that deficiencies in the following four pre-launch processes resulted in the mishap: the design process inverted the G-switch sensor design; the design review process did not detect the design error; the verification process did not detect the design error; and the Red Team review process did not uncover the failure in the verification process. The Board identified several root causes and major contributing factors that resulted in the design inversion of the G-switch sensors and the failures to detect it. The root causes and contributing factors fall into six categories, some of which contributed to more than one of the above process errors.

Archaeology Anthropology and Interstellar Communication Douglas A. Vakoch, 2015-03-24 Addressing a field that has been dominated by astronomers, physicists, engineers, and computer scientists, the contributors to this collection raise questions that may have been overlooked by physical scientists about the ease of establishing meaningful communication with an extraterrestrial intelligence. These scholars are grappling with some of the enormous challenges that will face humanity if an information-rich signal emanating from another world is detected. By drawing on issues at the core of contemporary archaeology and anthropology, we can be much better prepared for contact with an extraterrestrial civilization, should that day ever come.

Disrupting Corporate Culture David G. White, Jr, 2020-08-17 Research in cognitive science over the last 30 years shows much of what we know about culture in the business world is based on myth, wishful thinking, outdated science, or is just plain wrong. This is why culture-shaping and change programs in organizations often amount to little more than sloganeering with minimal impact on the lived experience of employees. This book bridges the gap between the latest research on cognitive science and culture, providing a valuable guide for change leaders, CEOs, and practitioners on how to sustainably work with and change this important resource. It answers many of the major questions that have plagued culture work, such as: Why so many CEOs and management consultants preach culture change when so few culture interventions actually succeed Why CEOs persist in believing culture starts at the top when virtually no research in anthropology supports that claim Why most culture shaping approaches have no answer for how to affect culture in global companies Why culture doesn't cause us to do anything, yet we persist in believing that somehow it does Why so many culture-shaping projects focus on corporate values despite the fact modern science shows why changing personal values is exceedingly difficult What we are learning about culture from the last 30 years of cognitive science gives us the foundation for far more impactful and sustainable interventions than have been possible to date. This book explains why, showing how everyday business practices well beyond HR are key to culture change. Why? Because the brain's synaptic plasticity can only be altered through new sustained and widespread organizational habits and routines. This groundbreaking, practical guide will show you finally how to realize the full power of culture as a transformational, empowering, and competitive resource.

Relativity Albert Einstein, 2012-08-06 Time's 'Man of the Century', Albert Einstein is the unquestioned founder of modern physics. His theory of relativity is the most important scientific idea of the modern era. In this short book Einstein explains, using the minimum of mathematical terms, the basic ideas and principles of the theory which has shaped the world we live in today. Unsurpassed by any subsequent books on relativity, this remains the most popular and useful exposition of Einstein's immense contribution to human knowledge.

Life Into Space Kenneth A. Souza, Robert Hogan, Robert P. Hogan, Rodney Ballard, 1995

Genesis in Space and Time Francis A. Schaeffer, 2009-12-08 Genesis is a book of origins--the origin of the universe, the origin of life and the origin of man. It places man in his cosmic setting, shows his particular uniqueness, explains his wonder and his flaw, and begins to trace the flow of human history through space and time. Many today, however, view this book as a collection of myths, useful for understanding the Hebrew mind, perhaps, but certainly not a record of what really happened. Dr. Francis A. Schaeffer challenges that view and shows how the first eleven chapters of Genesis stand as a solid, space-time basis for answering the tough questions posed by modern man.

Plates, Plumes, and Planetary Processes Gillian R. Foulger, Donna M. Jurdy, 2007 Presents a collection of papers discussing various hypotheses and models of planetary plumes.

Psychology of Space Exploration: Contemporary Research in Historical Perspective Douglas A. Vakoch, National Aeronautics and Space Administration, 2012-01-27 Through essays on topics including survival in extreme environments and the multicultural dimensions of exploration, readers will gain an understanding of the psychological challenges that have faced the space program since its earliest days. An engaging read for those interested in space, history, and psychology alike, this is a highly relevant read as we stand poised on the edge of a new era of spaceflight. Each essay also explicitly addresses the history of the psychology of space exploration.

Practical Statistics for Data Scientists Peter Bruce, Andrew Bruce, 2017-05-10 Statistical methods are a key part of data science, yet very few data scientists have any formal statistics training. Courses and books on basic statistics rarely cover the topic from a data science perspective. This practical guide explains how to apply various statistical methods to data science, tells you how to avoid their misuse, and gives you advice on what's important and what's not. Many data science resources incorporate statistical methods but lack a deeper statistical perspective. If you're familiar with the R programming language, and have some exposure to statistics, this quick reference bridges the gap in an accessible, readable format. With this book, you'll learn: Why exploratory data analysis is a key preliminary step in data science How random sampling can reduce bias and yield a higher quality dataset, even with big data How the principles of experimental design yield definitive answers to questions How to use regression to estimate outcomes and detect anomalies Key classification techniques for predicting which categories a record belongs to Statistical machine learning methods that "learn" from data Unsupervised learning methods for extracting meaning from unlabeled data

Pale Blue Dot Carl Sagan, Ann Druyan, 2011-07-06 "Fascinating . . . memorable . . . revealing . . . perhaps the best of Carl Sagan's books."—The Washington Post Book World (front page review) In *Cosmos*, the late astronomer Carl Sagan cast his gaze over the magnificent mystery of the Universe and made it accessible to millions of people around the world. Now in this stunning sequel, Carl Sagan completes his revolutionary journey through space and time. Future generations will look back on our epoch as the time when the human race finally broke into a radically new frontier—space. In *Pale Blue Dot*, Sagan traces the spellbinding history of our launch into the

cosmos and assesses the future that looms before us as we move out into our own solar system and on to distant galaxies beyond. The exploration and eventual settlement of other worlds is neither a fantasy nor luxury, insists Sagan, but rather a necessary condition for the survival of the human race. "Takes readers far beyond Cosmos . . . Sagan sees humanity's future in the stars."—Chicago Tribune

Genesis of the Space Race: the Inner Earth and the Extra Terrestrials John Leith, 2015-07-14 John B. Leith was born in 1920 with a photographic mind. He graduated from high school in 1937 and took spiritual training in Lhasa, Tibet for nine months before joining the Office of Strategic Services. During the last two years of WW II he led a six-man special-forces team out of London specializing in breaking prisoners out of German jails in France, Germany, and Poland. Though he became the most highly decorated soldier of any war, he was not allowed to acknowledge he had any combat service until after his death. He studied literature at Oxford while describing his 12 most exciting of 62 missions behind German lines. As liaison officer between General Patton and Gen Von Rundstedt he learned how selected people were fleeing Germany. These missions are described in *The Man with the Golden Sword*. Leith studied in Canada and spent 25 years earning a living as a journalist. In 1975, after demonstrating that he could keep his OSS experiences hidden from the public for 30 years, the CIA asked Leith to team up with another wartime OSS officer, Father John in WW II, and interview people associated with the development of round-wing planes, both for our allies and for Germany. Neither group was allowed to use that technology for war, because both were assisted by wiser beings from off this planet. *Genesis for The Space Race: The Inner Earth and the Extraterrestrials* was dedicated to an unsung hero, Jonathan E. Caldwell, inventor of this civilization's first spacecraft. He used several names for security. Read about him on Wikipedia. Like most CIA-approved releases, this 376-page book was required to have disinformation published with it and shown in a map of inner-Earth civilizations provided by an Atlantean cartographer. A 4-page Preamble helps the reader understand the disinformation and its need. This book falsely indicates Hitler went with other officers and scientists to New Berlin, accessed from Antarctica. Pope Pius XII trained him to convert pagans in the jungles of Ecuador. The map falsely shows 125-mile-diameter holes at each poll required by the CIA to keep wealthy people from spending their fortunes in attempts to access the Inner Earth to acquire advanced technologies. Leith's term Inner Earth was sometimes changed to Hollow Earth and the story modified to match. Also, this book says that Hitler's son came to his father's funeral in Zaragoza, Spain in 1974, though the real funeral to which his son, born to Eva Braun in 1945, came was in Cuenca, Ecuador in 1978. It has three sections: Space Race, The Inner World of Extra Terrestrials, and Primer For a New Age of Space. Chapter XVII is titled Intrusion of Alien Beings into World Societies and Interviews with Leading Extra Terrestrials. The Epilogue describes how the 54-12 committee developed strategy for USA presidents since Eisenhower to maintain air supremacy into the 1980s and beyond. It describes foreign awards presented to Lt. General Caldwell after he retired in 1967, including a singular Congressional Medal presented by Eisenhower. The Appendix is titled Social, Political, Economic and Religious life in Inner Earth. Notes and Sources follow with excellent research on many controversial issues that came up during the

interviews. Following are pictures of construction of New Berlin and a completed housing block with many German soldiers lined up for inspection. A 57-item bibliography from Occult and the Third Reich by Jean-Michel Angelbert to The Bible and Future Events by Leon Wood is listed. Between are: The Secret Doctrine by Blavatsky; UFO's and Interplanetary Visitors by Fowler; Our Haunted Planet by Keel; Aliens from Space by Keyhoe; The Great White Brotherhood by Prophet; and Secret of the Ages - UFOs from Inside the Earth by Trench. Following Leith's writing are addendums by the Owner, Robyn Andrews, who worked with Leith at conferences, and by MUFON Investigator Michael Forte who investigated Leith's research specialist, Frank Hudson.

Beyond Earth Asif A. Siddiqi,2018 This is a completely updated and revised version of a monograph published in 2002 by the NASA History Office under the original title Deep Space Chronicle: A Chronology of Deep Space and Planetary Probes, 1958-2000. This new edition not only adds all events in robotic deep space exploration after 2000 and up to the end of 2016, but it also completely corrects and updates all accounts of missions from 1958 to 2000--Provided by publisher.

Genesis and the Big Bang Theory Gerald Schroeder,1991-12-01 A ground-breaking book that takes on skeptics from both sides of the cosmological debate, arguing that science and the Bible are not at odds concerning the origin of the universe. The culmination of a physicist's thirty-five-year journey from MIT to Jerusalem, Genesis and the Big Bang presents a compelling argument that the events of the billions of years that cosmologists say followed the Big Bang and those of the first six days described in Genesis are, in fact, one and the same--identical realities described in vastly different terms. In engaging, accessible language, Dr. Schroeder reconciles the observable facts of science with the very essence of Western religion: the biblical account of Creation. Carefully reviewing and interpreting accepted scientific principles, analogous passages of Scripture, and biblical scholarship, Dr. Schroeder arrives at a conclusion so lucid that one wonders why it has taken this long in coming. The result for the reader--whether believer or skeptic, Jewish or Christian--is a totally fresh understanding of the key events in the life of the universe.
