Executive Summary of Propulsion on the Orion Abort Flight-Test Vehicles National Aeronautics and Space Adm Nasa,2019-01-13 The National Aeronautics and Space Administration Orion Flight Test Office was tasked with conducting a series of flight tests in several launch abort scenarios to certify that the Orion Launch Abort System is capable of delivering astronauts aboard the Orion Crew Module to a safe environment, away from a failed booster. The first of this series was the Orion Pad Abort 1 Flight-Test Vehicle, which was successfully flown on May 6, 2010 at the White Sands Missile Range in New Mexico. This report provides a brief overview of the three propulsive subsystems used on the Pad Abort 1 Flight-Test Vehicle. An overview of the propulsive systems originally planned for future flight-test vehicles is also provided, which also includes the cold gas Reaction Control System within the Crew Module, and the Peacekeeper first stage rocket motor encased within the Abort Test Booster aeroshell. Although the Constellation program has been cancelled and the operational role of the Orion spacecraft has significantly evolved, lessons learned from Pad Abort 1 and the other flight-test vehicles could certainly contribute to the vehicle architecture of many future human-rated space launch vehicles Jones, Daniel S. and Brooks, Syri J. and Barnes, Marvin W. and McCauley, Rachel J. and Wall, Terry M. and Reed, Brian D. and Duncan, C. Low Cost Electric Propulsion Thruster for Deep Space Robotic Science Missions National Aeronautics and Space Adm Nasa,2019-01-19 Electric Propulsion (EP) has found widespread acceptance by commercial satellite providers for on-orbit station keeping due to the total life cycle cost advantages these systems offer. NASA has also sought to benefit from the use of EP for primary propulsion onboard the Deep Space-1 and DAWN spacecraft. These applications utilized EP systems based on gridded ion thrusters, which offer performance unequaled by other electric propulsion thrusters. Through the In-Space Propulsion Project, a lower cost thruster technology is currently under development designed to make electric propulsion intended for primary propulsion applications cost competitive with chemical propulsion systems. The basis for this new technology is a very reliable electric propulsion thruster called the Hall thruster. Hall thrusters, which have been flown by the Russians dating back to the 1970s, have been used by the Europeans on the SMART-1 lunar orbiter and currently employed by 15 other geostationary spacecraft. Since the inception of the Hall thruster, over 100 of these devices have been used with no known failures. This paper describes the latest accomplishments of a development task that seeks to improve Hall thruster technology by increasing its specific impulse, throttle-ability, and lifetime to make this type of electric propulsion thruster applicable to NASA deep space science missions. In addition to discussing recent progress on this task, this paper describes the performance and cost benefits projected to result from the use of advanced Hall thrusters for deep space science missions. Launching Science National Research Council,Division on Engineering and Physical Sciences,Aeronautics and Space Engineering Board,Space Studies Board,Committee on Science Opportunities Enabled by NASA's Constellation System,2009-02-12 In January 2004 NASA was given a new policy direction known as the Vision for Space Exploration. That plan, now renamed the United States Space Exploration Policy, called for sending human and robotic missions to the Moon, Mars, and beyond. In 2005 NASA outlined how to conduct the first steps in implementing this policy and began the development of a new human-carrying spacecraft known as Orion, the lunar lander known as Altair, and the launch vehicles Ares I and Ares V. Collectively, these are called the Constellation System. In November 2007 NASA asked the National Research Council (NRC) to evaluate the potential for new science opportunities enabled by the Constellation System of rockets and spacecraft. The NRC committee evaluated a total of 17 mission concepts for future space science missions. Of those, the committee determined that 12 would benefit from the Constellation System and five would not. This book presents the committee's findings and recommendations, including cost estimates, a review of the technical feasibility of each mission, and identification of the missions most deserving of future study.

Launch Magazine's History of American Rocketry Mark Mayfield,2021-09-21 A must-have for anyone fascinated by space travel, rocketry, NASA, SpaceX, and more! A new era in spaceflight, led by SpaceX and other commercial rocket companies, is generating the kind of worldwide interest in space travel that we haven't seen since the space race of the 1960s. Kids are dreaming of becoming astronauts again. New feats, such as SpaceX's remarkable ability to land booster rockets, under powered descent, back on land or sea has galvanized a new generation of rocket enthusiasts. Yet none of this would be possible without the advances of rocketry over the past century. The Chinese were the first to develop black-powder fireworks and rockets centuries ago, but modern rocketry truly began with Robert Goddard's launch of a liquid-fueled rocket on a Massachusetts farm in 1926. That metal contraption—which flew just 41 feet high before arching over and streaking 184 feet into a cabbage patch—came just 43 years before Neil Armstrong stepped foot on the moon on July 20, 1969. Armstrong's Apollo 11 mission was made possible by a giant 36-story-tall Saturn V rocket that used some of the same propulsion principles as Goddard's first tiny, crude rockets. The beginning of the "Space Age" is considered to be Russia's

launch of the world's first satellite, Sputnik, in 1957. But it was the pioneering human spaceflights of the 1960s that captured the imagination of the world and turned astronauts into heroes. Weapons of war—the Redstone, Atlas, and Titan II missiles—were converted into civilian launch boosters and led to the success of the Mercury and Gemini programs. All the while, Saturn rockets were being developed that would ultimately lead to the moon missions. Kids were so excited about these pioneering space flights that an entirely new hobby—model rocketry—was created to serve their interests. Small scale models of NASA's big rockets were ordered by the millions, generating a \$100 million hobby at a time when there were no video games, no internet, and no cable, just three broadcast television networks. Now, the next generation of rockets from SpaceX and other commercial companies, along with NASA's new launch vehicles and Orion spacecraft, will lead the United States and the world into a new era of rocketry—beginning with crewed flights to the moon as early as 2024, and ultimately to Mars within the first half of this century.

Science Opportunities Enabled by NASA's Constellation System National Research Council, Division on Engineering and Physical Sciences, Aeronautics and Space Engineering Board, Space Studies Board, Committee on Science Opportunities Enabled by NASA's Constellation System, 2008-05-08 To begin implementation of the Vision for Space Exploration (recently renamed United States Space Exploration Policy), NASA has begun development of new launch vehicles and a human-carrying spacecraft that are collectively called the Constellation System. In November 2007, NASA asked the NRC to evaluate the potential for the Constellation System to enable new space science opportunities. For this interim report, 11 existing Vision Mission studies of advanced space science mission concepts inspired by earlier NASA forward-looking studies were evaluated. The focus was to assess the concepts and group them into two categories: more-deserving or less deserving of future study. This report presents a description of the Constellation System and its opportunities for enabling new space science opportunities, and a systematic analysis of the 11 Vision Mission studies. For the final report, the NRC issued a request for information to the relevant communities to obtain ideas for other mission concepts that will be assessed by the study committee, and several issues addressed only briefly in the interim report will be explored more fully.

Apollo 17 Lyndon B. Johnson Space Center, 1973 The Apollo 17 flight and lunar landing, the sixth and final lunar landing and third extended science capability mission in the Apollo Program, are discussed with emphasis on the scientific endeavors conducted on the lunar surface. The scientific investigation of the mission is presented in three interrelated types of activities: the lunar surface sampling and observation, the lunar surface experiments, and the inflight experiments. Collection, documentation, and description of the lunar samples are discussed with a preliminary evaluation and analysis. The lunar surface experiments are described, including the results and their relationship to the scientific objectives of each experiment. The geochemical, photographic, geophysical, topographic, and medical data resulting from experiments conducted in flight are presented.

Forging the Future of Space Science National Research Council, Division on Engineering and Physical Sciences, Aeronautics and Space Engineering Board, Space Studies Board, 2010-03-08 From September 2007 to June 2008 the Space Studies Board conducted an international public seminar series, with each monthly talk highlighting a different topic in space and Earth science. The principal lectures from the series are compiled in *Forging the Future of Space Science*. The topics of these events covered the full spectrum of space and Earth science research, from global climate change, to the cosmic origins of life, to the exploration of the Moon and Mars, to the scientific research required to support human spaceflight. The prevailing messages throughout the seminar series as demonstrated by the lectures in this book are how much we have accomplished over the past 50 years, how profound are our discoveries, how much contributions from the space program affect our daily lives, and yet how much remains to be done. The age of discovery in space and Earth science is just beginning. Opportunities abound that will forever alter our destiny.

Living and Working in Space William David Compton, Charles D. Benson, 2013-05-13 The official record of America's first space station, this book from the NASA History Series chronicles the Skylab program from its planning during the 1960s through its 1973 launch and 1979 conclusion. Definitive accounts examine the project's achievements as well as its use of discoveries and technology developed during the Apollo program. 1983 edition.

NASA's Journey to Mars: Pioneering Next Steps in Space Exploration National Aeronautics and Space Administration, 2016-02-05 This document communicates NASA's strategy and progress to learn about the Red Planet, to inform us more about our Earth's past and future, and may help answer whether life exists beyond our home planet. Together with NASA's partners in academia and commercial enterprises, NASA's vision is to pioneer Mars and answer some of humanity's fundamental questions: • Was Mars home to microbial life? Is it today? • Could it be a safe home for humans one day? • What can it teach us about life elsewhere in the cosmos or how life began on Earth? • What can it teach us about Earth's past, present, and future?

Rocket and Spacecraft Propulsion Martin J. L. Turner, 2006-08-29 The revised edition of this practical, hands-on book discusses the launch vehicles in use today throughout the world, and includes the latest details on advanced systems being developed, such as electric and nuclear propulsion. The author covers the fundamentals, from the basic principles of rocket propulsion and vehicle dynamics through the theory and practice of liquid and solid propellant motors, to new and future developments. He provides a serious exposition of the principles and practice of rocket propulsion, from the point of view of the user who is not an engineering specialist.
