Tau Rho Alpha, Leslie C. Gordon

*Make Your Own Paper Model of a Volcano* Tau Rho Alpha, Leslie C. Gordon, 1991  
Volcanic Eruptions and Their Repose, Unrest, Precursors, and Timing  
National Academies of Sciences, Engineering, and Medicine, Division on Earth and Life Studies, Board on Earth Sciences and Resources, Committee on Seismology and Geodynamics, Committee on Improving Understanding of Volcanic Eruptions, 2017-07-24 Volcanic eruptions are common, with more than 50 volcanic eruptions in the United States alone in the past 31 years. These eruptions can have devastating economic and social consequences, even at great distances from the volcano. Fortunately many eruptions are preceded by unrest that can be detected using ground, airborne, and spaceborne instruments. Data from these instruments, combined with basic understanding of how volcanoes work, form the basis for forecasting eruptions—where, when, how big, how long, and the consequences. Accurate forecasts of the likelihood and magnitude of an eruption in a specified timeframe are rooted in a scientific understanding of the processes that govern the storage, ascent, and eruption of magma. Yet our understanding of volcanic systems is incomplete and biased by the limited number of volcanoes and eruption styles observed with advanced instrumentation. *Volcanic Eruptions and Their Repose, Unrest, Precursors, and Timing* identifies key science questions, research and observation priorities, and approaches for building a volcano science community capable of tackling them. This report presents goals for making major advances in volcano science.

**Detecting, Modelling and Responding to Effusive Eruptions** A.J.L. Harris, T. De Groeve, F. Garel, S.A. Carn, 2016-06-28 For effusive volcanoes in resource-poor regions, there is a pressing need for a crisis response-chain bridging the global scientific community to allow provision of standard products for timely humanitarian response. As a first step in attaining this need, this Special Publication provides a complete directory of current operational capabilities for monitoring effusive eruptions. This volume also reviews the state-of-the-art in terms of satellite-based volcano hot-spot tracking and lava-flow simulation. These capabilities are demonstrated using case studies taken from well-known effusive events that have occurred worldwide over the last two decades at volcanoes such as Piton de la Fournaise, Etna, Stromboli and Kilauea. We also provide case-type response models implemented at the same volcanoes, as well as the results of a community-wide drill used to test a fully-integrated response focused on an operational hazard-GIS. Finally, the objectives and recommendations of the 'Risk Evaluation, Detection and Simulation during Effusive Eruption Disasters' working group are laid out in a statement of community needs by its members.

**Characteristics of Hawaiian Volcanoes** Michael P. Poland, Taeko Jane Takahashi, Claire M. Landowski, 2014 *Characteristics of Hawaiian Volcanoes* establishes a benchmark for the current understanding of volcanism in Hawaii, and the articles herein build upon the elegant and pioneering work of Dutton, Jagger, Steams, and many other USGS and academic scientists. Each chapter synthesizes the lessons learned about a specific aspect of volcanism in Hawaii, based largely on continuous observation of eruptive activity and on systematic research into volcanic and earthquake processes during HVO's first 100 years.
