Flying Aircraft Carriers of the USAF: McDonnell Xf-85 Goblin Brian Lockett, 2009-08-01 The P-85 Goblin was the only airplane that ever flew which was designed from scratch to be operated entirely from another airplane. The development of the B-36 by the Consolidated Vultee Aircraft Corporation of Fort Worth, Texas resulted in a requirement for fighter protection for the bomber at distances from any friendly base that far exceeded the range of currently available escort fighter airplanes. Due to the inability of contemporary fighters to escort B-36 bombers all the way to their targets, the Army Air Corps initiated Project MX-472, Unconventional Fighter Design Studies, on December 3, 1942. The primary objective of the project was the development of a suitable method of protecting the B-36 on long-range bombing missions. The McDonnell Aircraft Corporation designed the P-85 Goblin to fit entirely within the confines of the bomb bay of the B-36. The little fighter was just fifteen feet long with a wing span of twenty-one feet.

The Cutting Edge Mark A. Lorell, Hugh P. Levaux, United States. Air Force, Project Air Force (U.S.), 1998 The proposition that innovation is critical in the cost-effective design and development of successful military aircraft is still subject to some debate. RAND research indicates that innovation is promoted by intense competition among three or more industry competitors. Given the critical policy importance of this issue in the current environment of drastic consolidation of the aerospace defense industry, the authors here examine the history of the major prime contractors in developing jet fighters since World War II. They make use of an extensive RAND database that includes nearly all jet fighters, fighter-attack aircraft, and bombers developed and flown by U.S. industry since 1945, as well as all related prototypes, modifications, upgrades, etc. The report concludes that (1) experience

matters, because of the tendency to specialize and thus to develop system-specific expertise; (2) yet the most dramatic innovations and breakthroughs came from secondary or marginal players trying to compete with the industry leaders; and (3) dedicated military R&D conducted or directly funded by the U.S. government has been critical in the development of new higher-performance fighters and bombers.

Bomber R & D Since 1945 Mark A. Lorell, Alison Saunders, Hugh P. Levaux, 1995 The authors conclude that relevant experience does, indeed, matter--firms develop valuable system-specific knowledge in ongoing work, and experience in important new technologies has a distinct advantage.

Buyology Martin Lindstrom, 2010-02-02 NEW YORK TIMES BESTSELLER • "A fascinating look at how consumers perceive logos, ads, commercials, brands, and products."—Time How much do we know about why we buy? What truly influences our decisions in today's message-cluttered world? In *Buyology*, Martin Lindstrom presents the astonishing findings from his groundbreaking three-year, seven-million-dollar neuromarketing study—a cutting-edge experiment that peered inside the brains of 2,000 volunteers from all around the world as they encountered various ads, logos, commercials, brands, and products. His startling results shatter much of what we have long believed about what captures our interest—and drives us to buy. Among the questions he explores: • Does sex actually sell? • Does subliminal advertising still surround us? • Can "cool" brands trigger our mating instincts? • Can our other senses—smell, touch, and sound—be aroused when we see a product? *Buyology* is a fascinating and shocking journey into the mind of today's consumer that will captivate anyone who's been seduced—or turned off—by marketers' relentless attempts to win our loyalty, our money, and our minds.

Moon Shot Alan Shepard, Deke Slayton, Jay Barbree, 2011-05-03 New York Times bestseller for fans

of First Man: A “breathtaking” insider history of NASA’s space program—from astronauts Alan Shepard and Deke Slayton (Entertainment Weekly). On October 4, 1957, the Soviet Union launched Sputnik I, and the space race was born. Desperate to beat the Russians into space, NASA put together a crew of the nation’s most daring test pilots: the seven men who were to lead America to the moon. The first into space was Alan Shepard; the last was Deke Slayton, whose irregular heartbeat kept him grounded until 1975. They spent the 1960s at the forefront of NASA’s effort to conquer space, and Moon Shot is their inside account of what many call the twentieth century’s greatest feat—landing humans on another world. Collaborating with NBC’s veteran space reporter Jay Barbree, Shepard and Slayton narrate in gripping detail the story of America’s space exploration from the time of Shepard’s first flight until he and eleven others had walked on the moon.

The Complete Pocket-guide to Europe Edmund Clarence Stedman, Thomas Lathrop Stedman, 1898
Introduction to UAV Systems Paul Fahlstrom, Thomas Gleason, 2012-07-11 Unmanned aerial vehicles (UAVs) have been widely adopted in the military world over the last decade and the success of these military applications is increasingly driving efforts to establish unmanned aircraft in non-military roles. *Introduction to UAV Systems*, 4th edition provides a comprehensive introduction to all of the elements of a complete Unmanned Aircraft System (UAS). It addresses the air vehicle, mission planning and control, several types of mission payloads, data links and how they interact with mission performance, and launch and recovery concepts. This book provides enough information to encourage a student to learn more; to provide a specialist with a basic appreciation of the technical issues that drive other parts of the system and interact with their specialty; or to help a program manager understand system-level tradeoffs and know what questions to ask. Key features: Comprehensive overview of all elements of a UAS and of how they interact. Introduces the underlying concepts of key

subsystems. Emphasizes system-integration issues and how they relate to subsystem design choices. Practical discussion of issues informed by lessons learned in UAV programs. Introduction to UAV Systems, 4th edition is written both for newcomers to the subject and for experienced members of the UAV community who desire a comprehensive overview at the system level. As well as being a primary text for an introductory course on UAS or a supplementary text in a course that goes into more depth in one of the individual technologies involved in a UAS, this book is a useful overview for practicing engineers, researchers, managers, and consultants interested in UAV systems.

Soviet Secret Projects Tony Buttler, Yefim Gordon, 2005 This is the latest among Midland's very successful 'Secret Projects' series. This, the second of three volumes covering Soviet secret aviation projects, is devoted to post-World War II fighters and will include designs from famous bureaus such as Lavochkin, Mikoyan, Sukhoi, Yakovlev, Myasishchev, and Tupolev. The book covers early post-war fighters, competitions for the first-generation supersonic designs (MiG-21 and Su-7/-9), advanced designs of the 1960s which led to the MiG-2 and competitions to build the specifications which resulted in the MiG-29, Su-27, and MiG I-44. A number of previously unpublished Yakovlev designs from the late 1950s and early 1960s form a separate chapter, followed by another covering Yakovlev's VSTOL work. The book also describes the competition between design bureaus for orders and shows the progress made in aircraft design behind the Iron Curtain. It will give both experts and enthusiasts the chance to compare this work to Western aircraft programs of the era.

Achtung-Panzer! Heinz Guderian, 1995 This is one of the most significant military books of the twentieth century. By an outstanding soldier of independent mind, it pushed forward the evolution of land warfare and was directly responsible for German armoured supremacy in the early years of the Second World War. Published in 1937, the result of 15 years of careful study since his days on the

German General Staff in the First World War, Guderian's book argued, quite clearly, how vital the proper use of tanks and supporting armoured vehicles would be in the conduct of a future war. When that war came, just two years later, he proved it, leading his Panzers with distinction in the Polish, French and Russian campaigns. Panzer warfare had come of age, exactly as he had forecast. This first English translation of Heinz Guderian's classic book - used as a textbook by Panzer officers in the war - has an introduction and extensive background notes by the modern English historian Paul Harris.

Aircraft Design Daniel P. Raymer, 2006 Winner of the Summerfield Book Award Winner of the Aviation-Space Writers Association Award of Excellence. --Over 30,000 copies sold, consistently the top-selling AIAA textbook title This highly regarded textbook presents the entire process of aircraft conceptual design from requirements definition to initial sizing, configuration layout, analysis, sizing, and trade studies in the same manner seen in industry aircraft design groups. Interesting and easy to read, the book has more than 800 pages of design methods, illustrations, tips, explanations, and equations, and extensive appendices with key data essential to design. It is the required design text at numerous universities around the world, and is a favorite of practicing design engineers.

Boeing B-29 Superfortress John M. Campbell, 1997 The famed B-29 Superfortress is presented in this all new collection of World War II and Korean War era photographs. Many of the 850+ photographs appear here for the first time and are identified as to unit and location. John Campbell is also the author of Consolidated B-24 Liberator, and Talisman: A Collection of Nose Art (available from Schiffer Publishing Ltd.).

The Stirling Story Michael J. F. Bowyer, 2002 Conceived in the shadow of looming war, when the RAF's bomber force was largely made up of obsolete and outmoded aircraft, the Stirling became the first British four-engined 'heavy' bomber of the Second World War. Developed, tested and brought

into service in the first desperate years of the Second World War, the arrival of the Stirling marked a turning point in the aerial warfare of that conflict, the moment when the Allies went on the offensive against the German homeland. In the years that followed Stirling squadrons were at the forefront of the developing tactics of the Allied bomber campaign - target marking, pathfinding, electronic navigation, the thousand bomber raids etc. - that were ultimately to lead to the utter devastation of so many German cities. Despite this leading role the Stirling has never enjoyed the standing of the Halifax and the even more celebrated Lancaster. Handicapped by an unrealistic peacetime design specification, it could not match the performance of its more famous successors and was withdrawn from frontline service as deliveries of Lancasters and Halifaxes gathered momentum. However, even then the Stirling proved to be versatile and adaptable as a glider tug, transport in secret SOE operations, and later as a civilian transport in the immediate post-war years. The Stirling Story is the culmination of years of exhaustive research by one of the world's foremost aviation authors. From original design specification and testing, through its development, introduction to service, developing marks and later adaptations the full story of the Shorts Stirling bomber is told with the aid of eyewitness accounts from the designers, production workers, engineers and above all the crews of the Stirling. Much more than the history of just one aircraft type, The Stirling Story is the story of RAF Bomber Command emerging from obscurity and failure to become a devastatingly effective weapon of war. It is an essential work of reference that no serious military aviation enthusiast or war historian can afford to be without, as well as a fascinating read for anyone with any interest in, or connection with, the Shorts Stirling.'

Aerodynamic Characteristics of the NACA 747A315 and 747A415 Airfoils from Tests in the NACA Two-dimensional Low-turbulence Pressure Tunnel Albert E. Von Doenhoff, Louis S. Stivers, 1944

Summary: Two low-drag airfoils, the NACA 747A315 and the NACA 747A415, designed to have reduced pitching moments about the quarter-chord point and moderately high values of the design lift coefficient have been tested in the NACA two-dimensional low-turbulence pressure tunnel. Section lift, drag, and pitching-moment coefficients are presented for Reynolds numbers of 3×10^6 , 6×10^6 , and 9×10^6 , together with section lift and section drag data for a Reynolds number of 6×10^6 for the same airfoils with roughened leading edges.
