Drawing Futures Bob Sheil,Frédéric Migayrou,Luke Pearson,Laura Allen,2016-11-11 Drawing Futures brings together international designers and artists for speculations in contemporary drawing for art and architecture.Despite numerous developments in technological manufacture and computational design that provide new grounds for designers, the act of drawing still plays a central role as a vehicle for speculation. There is a rich and long history of drawing tied to innovations in technology as well as to revolutions in our philosophical understanding of the world. In reflection of a society now underpinned by computational networks and interfaces allowing hitherto unprecedented views of the world, the changing status of the drawing and its representation as a political act demands a platform for reflection and innovation. Drawing Futures will present a compendium of projects, writings and interviews that critically reassess the act of drawing and where its future may lie.Drawing Futures focuses on the discussion of how the field of drawing may expand synchronously alongside technological and computational developments. The book coincides with an international conference of the same name, taking place at The Bartlett School of Architecture, UCL, in November 2016. Bringing together practitioners from many creative fields, the book discusses how drawing is changing in relation to new technologies for the production and dissemination of ideas.

Web Advertising Anja Janoschka,2004-12-23 This book examines new forms of communication that have emerged through the interactive capabilities of the Internet, in particular online advertising and web advertisements. It develops a new model of online communication, incorporating mass communication and interpersonal communication. Interactive mass communication redefines the roles of online communication partners who are confronted with a higher degree of complexity in terms of hypertextual information units. In web advertising, this new aspect of interactivity is linguistically reflected in different types of personal address forms, directives, and trigger words. This study also analyzes the different strategies of persuasion with which web ads try to initiate their activation.Web Advertising provides essential information on the language of web advertisements for academics, researchers and students in the fields of hypertext-linguistics, advertising, communication and media studies.

Pictures of the Body James Elkins,1999 In a wide-ranging argument moving from Sumerian demons to Lucian Freud, from Syriac prayer books to John Carpenter's film *The Thing*, this book explores the ways the body has been represented through time. A response to the vertiginous increase in writings on bodily representations, it attempts to form a single coherent account of the possible forms of representation of the body. This work brings together concerns, images, and concepts from a wide range of perspectives: art history and criticism, the history and philosophy of medicine, the history of race, phenomenological and post-phenomenological thought, studies of feminism and pornography, and the new interest in visual studies. Yet it is less a philosopher's look at history or a historian's foray into philosophy than a practical and critical look at the current constellation of art practices. Above all, it is intended to be of immediate use in the conceptualization and production of visual art and its history.

UNCITRAL Secretariat Guide on the Convention on the Recognition and Enforcement of Foreign Arbitral Awards (New York, 1958) United Nations Commission on International Trade Law,2017-02-15 The New York Convention has served as the cornerstone of the international arbitration system since its signature in 1958 until the present day. The Guide on the New York Convention provides an insight on the application of the Convention by State courts. It was initiated in 2010 when UNCITRAL commissioned the assistance of Professors Gaillard and Bermann as part of its efforts to promote wider adherence to the text of the New York Convention as well as its uniform interpretation and effective implementation. The interpretation that derives from court decisions of diverse jurisdictions makes the Guide a unique tool to understand the New York Convention, an almost universally adopted text, and to monitor its application. This guide is mainly designed for legal practitioners.

Disappearances in Mexico Silvana Mandolessi,Katia Olalde Rico,2022-01-27 This volume presents an interdisciplinary analysis of the practice of disappearances in Mexico, from the period of the so-called ‘dirty war’ to the current crisis of disappearances associated with the country’s ‘war on drugs’, during which more than 80,000 people have disappeared. The volume brings together contributions by distinguished scholars from Mexico, Argentina and Europe, who focus their chapters on four broad axes of enquiry. In Part I, chapters examine the phenomenon of disappearances in its historical and present-day forms, and the struggles for memory around the disappeared in Mexico with reference to Argentina. Part II addresses the political dimensions of disappearances, focusing on the specificities that this practice acquires in the context of the counterinsurgency struggle of the 1970s and the so-called ‘war on drugs’. The third section situates the issue within the framework of human rights law by examining the conceptual and legal aspects of disappearances. The final chapters explore the social movement of the relatives of the disappeared, showing how their search for disappeared loved ones involves bodily and affective experiences as well as knowledge production. The volume thus aims to further our understanding of the crisis of disappearances in Mexico without, however, losing sight of the historic origins of the phenomenon.

Fundamentals of Protein Structure and Function Engelbert Buxbaum,2015-11-27 This book serves as an introduction to protein structure and function. Starting with their makeup from simple building blocks, called amino acids, the 3-dimensional structure of proteins is explained. This leads to a discussion how misfolding of proteins causes diseases like cancer, various encephalopathies, or diabetes. Enzymology and modern concepts of enzyme kinetics are then introduced, taking into account the physiological, pharmacological and medical significance of this often neglected topic. This is followed by thorough coverage

of haemoglobin and myoglobin, immunoproteins, motor proteins and movement, cell-cell interactions, molecular chaperones and chaperonins, transport of proteins to various cell compartments and solute transport across biological membranes. Proteins in the laboratory are also covered, including a detailed description of the purification and determination of proteins, as well as their characterisation for size and shape, structure and molecular interactions. The book emphasises the link between protein structure, physiological function and medical significance. This book can be used for graduate and advanced undergraduate classes covering protein structure and function and as an introductory text for researchers in protein biochemistry, molecular and cell biology, chemistry, biophysics, biomedicine and related courses. About the author: Dr. Buxbaum is a biochemist with interest in enzymology and protein science. He has been working on the biochemistry of membrane transport proteins for nearly thirty years and has taught courses in biochemistry and biomedicine at several universities.

Dehalogenation Max M. Häggblom, Ingeborg D. Bossert, 2007-05-08 Halogenated organic compounds constitute one of the largest groups of environmental chemicals. The industrial production of new halogenated organic compounds has increased throughout the last century peaking in the 1960s, and continuing in widespread use today. Organohalides are integral to a variety of industrial applications, including use as solvents, degreasing agents, biocides, pharmaceuticals, plasticizers, hydraulic and heat transfer fluids, and intermediates for chemical synthesis, to name a few. It is important to recognize the beneficial aspects of halogenated organic compounds, as well as their potentially deleterious impact on the environment and health. Recognition of the adverse environmental effects of many types of organohalide compounds has led to efforts to reduce or eliminate the most problematic ones. Although organohalide compounds are typically considered to be anthropogenic industrial compounds, they have their counterpart in several thousands of natural biogenic and geogenic organohalides, representing most classes of organic chemicals. Natural sources account for a significant portion of the global organohalogen budget. This volume authored by recognized experts in the field provides a current perspective on how both natural and synthetic organohalides are formed and degraded, and how these processes are incorporated into a global halogen cycle. The focus is on microbial processes, since these play a major role both in the production and degradation, i. e. , cycling of halogenated organic compounds in the environment. This book is organized into five parts. Part I, Introduction, provides a global perspective on the issues of organohalides and their fate in the environment.

Fungicide Resistance in Plant Pathogens Hideo Ishii, Derek William Hollomon, 2015-08-31 This volume offers a comprehensive coverage of the general principles and recent advances in fungicide resistance. It describes the development, mechanisms, monitoring, and management of resistance and covers the most important group of fungicides that have caused resistance on various crops. An historical review of fungicide resistance over the past 40 years sets the scene for up-to-date basic information on mode of action, as well as the genetics, mechanisms, and evolution of resistance. Monitoring for resistance, including the latest developments in molecular diagnostics, moves readers into the practical aspects of resistance management, which is dealt with through a series of case studies outlining fungicide-use strategies on several key crops. The chapters reflect the experience of authors internationally recognised for their significant contributions to fungicide resistance research. The majority of crop diseases are caused by fungal pathogens, and disease control relies heavily on chemically synthesized fungicides. However, modern fungicides often encounter the problem of resistance development in target pathogens. Thus pathogen resistance to fungicides is an important factor that causes loss of yield and quality of crops. It often threatens biosecurity through the decrease of fungicide efficacy in the fields. To manage fungicide resistance successfully will require the promotion of integrated disease management, involving not just chemical fungicides, but also host plant resistance, agronomic factors, and reliable biological control agents where these are available. Well referenced throughout, the book offers a comprehensive account of resistance, which will be useful as a source of material for lecturers and for both industrial and academic scientists involved in fungicide resistance research. It is also a valuable sourcebook for students.

War Magic Douglas Farrer, 2016-09-01 This compelling volume explores how war magic and warrior religion unleash the power of the gods, demons, ghosts, and the dead. Documenting war magic and warrior religion as they are performed in diverse cultures and across historical time periods, this volume

foregrounds embodiment, practice, and performance in anthropological approaches to magic, sorcery, shamanism, and religion. The authors go beyond what magic ‘represents’ to consider what magic does. From Chinese exorcists, Javanese spirit siblings, and black magic in Sumatra to Tamil Tiger suicide bombers, Chamorro spiritual re-enchantment, tantric Buddhist war magic, and Yanomami dark shamans, religion and magic are re-evaluated not just from the practitioner’s perspective but through the victim’s lived experience. These original investigations reveal a nuanced approach to understanding social action, innovation, and the revitalization of tradition in colonial and post-colonial societies undergoing rapid social transformation.
